EventoraX product guide

EventoraX helps universities, societies and organizations run events from start to finish: publish an event, take registrations, send QR tickets, check people in at the door, issue certificates anyone can verify, print ID cards and see how it all went.

This guide explains every page in plain language. You don't need any technical knowledge. The pictures come from the demo organization "Margalla University Computer Society".

Who are you?

You are…	What you do in EventoraX	Start here
Attendee (anyone, no account)	Register for events, get your QR ticket, check a certificate	Public pages
Organization admin	Run your organization: events, team, settings, billing	Getting started, then every chapter
Manager	Create and run events, attendees and certificates	Getting started, chapters 3–7
Viewer	Look at everything, change nothing (for example a faculty advisor)	Getting started
Superadmin (the EventoraX team)	Run the whole platform: organizations, payments, plans, settings	Superadmin panel

What each role can do

	Viewer	Manager	Admin
See events, attendees, tickets, certificates, ID cards, analytics	✅	✅	✅
Print ID cards and download tickets	✅	✅	✅
Create and edit events, speakers, sponsors, schedule		✅	✅
Add, import and edit attendees, change attendance		✅	✅
Check people in with the scanner		✅	✅
Issue, email and revoke certificates		✅	✅
Invite and manage the team			✅
Organization settings, branding, notifications			✅
Billing and payments, API tokens, activity log			✅

Everyone can edit their own profile, password and two-factor login under **Settings** → **My account**. Buttons you aren't allowed to use are simply not shown.

Chapters

1. Public pages: website, event pages, registering, verifying certificates
2. Getting started: sign up, log in, the dashboard, notifications
3. Events, speakers, sponsors and schedule
4. Registrations: attendees, CSV import, export
5. Tickets and check-in
6. Certificates
7. ID cards
8. Analytics and activity log
9. Your organization: team, settings, billing, API, help
10. Superadmin panel

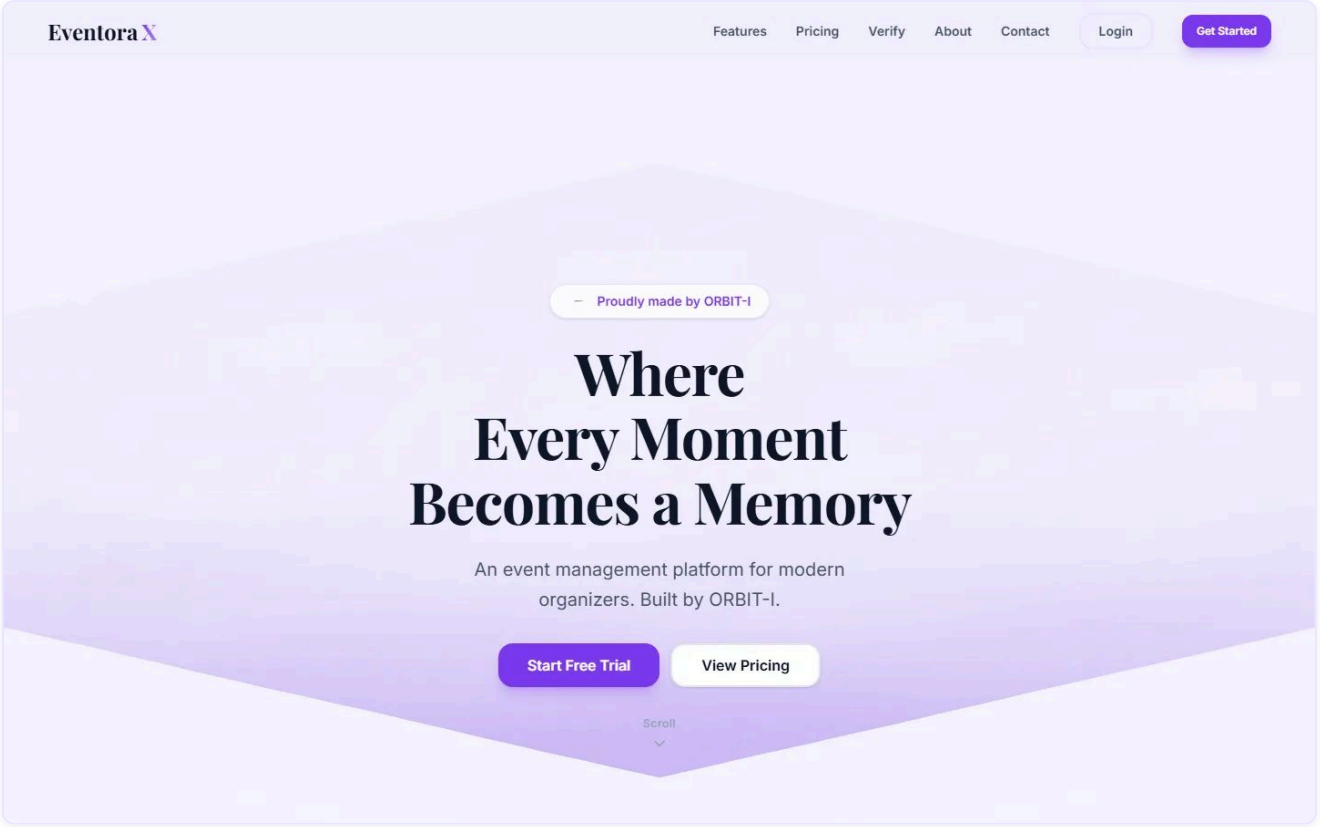

Words used in this guide

Word	Meaning
Organization	Your university society, department or company on EventoraX. Its data is private to its team.
Status of an event	**Draft** (only your team sees it), **Upcoming** (published, people can register), **Active** (happening now), **Completed** (over), **Archived** (put away, can be restored).
Mode	**Physical** (in person), **Online** or **Hybrid** (both).
Registration status	**Registered**, **Attended** (was there), **Absent** (didn't come, keeps the seat), **Cancelled** (frees the seat).
Category	A group of attendees you define per event, for example VIP, Student or Speaker. Printed on tickets, ID cards and certificates.
Verify code	The code on every certificate, like `EVX-CZBQ-7ZAX`. Anyone can check it on the website.
PKR	All prices are in Pakistani rupees.

1. Public pages

These pages are open to everyone, without an account.

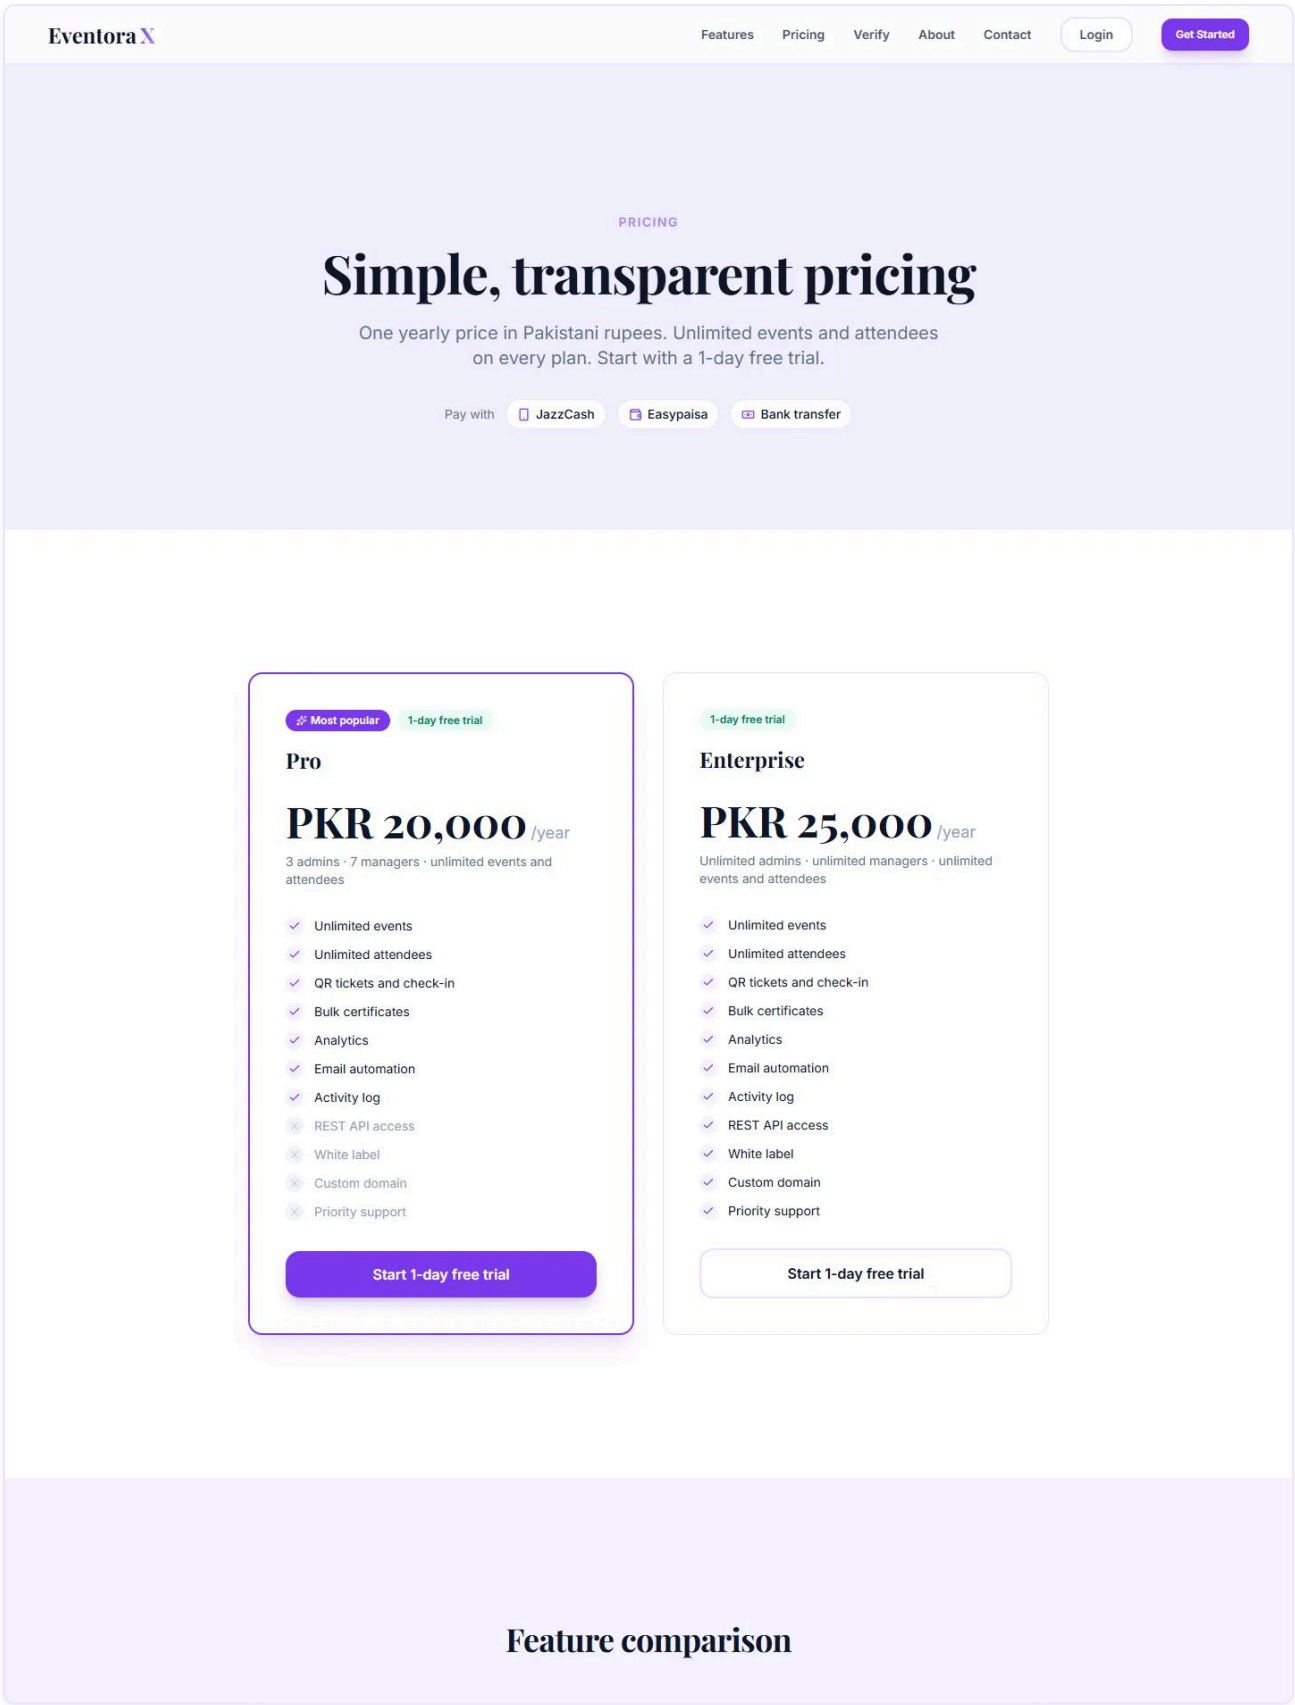

The website

Home page

The home page explains what EventoraX does. From the top menu you reach **Features**, **Pricing**, **Verify** (check a certificate), **About** and **Contact**. **Get Started** creates an organization; **Login** is for existing teams.

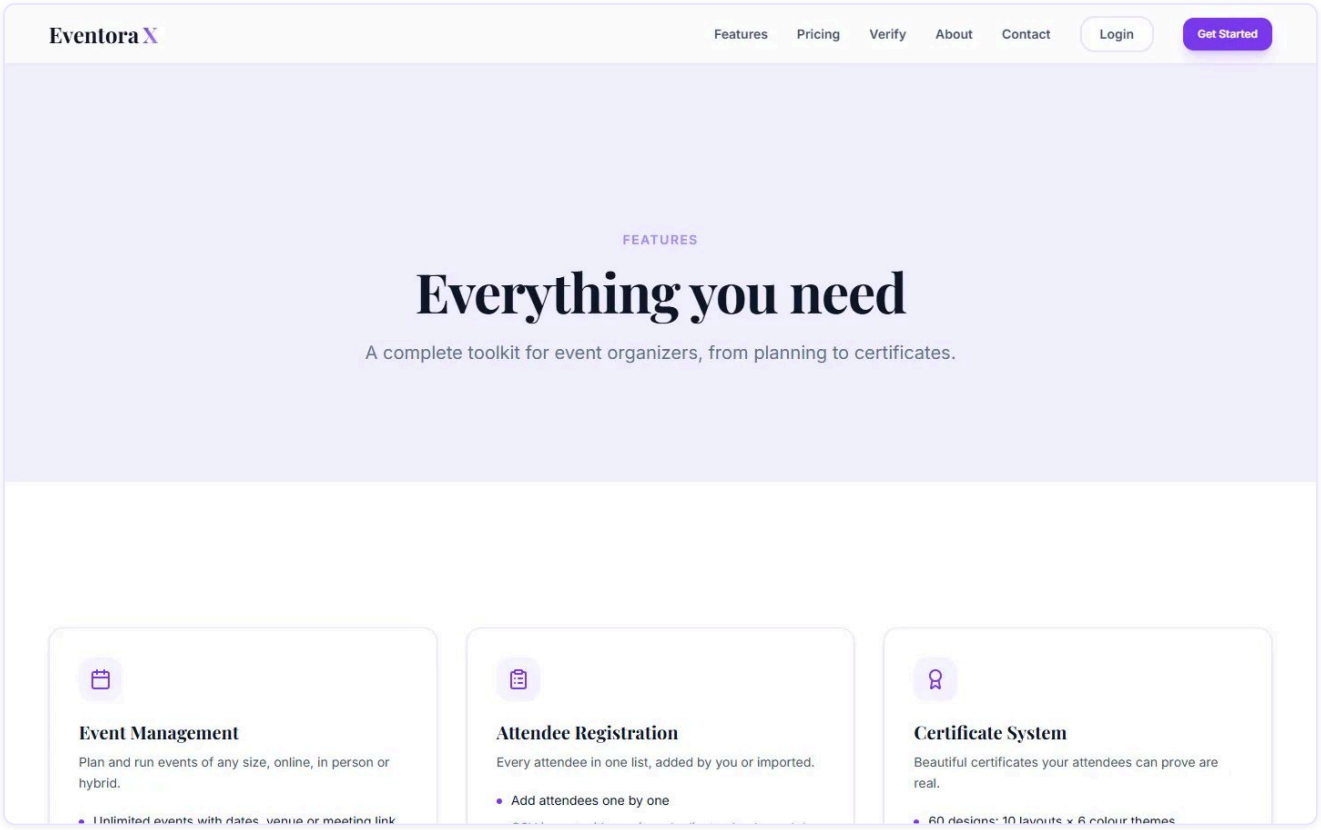

Pricing

Pricing page

The plans with their yearly price in PKR, what each includes, how long the free trial is, the accepted payment methods (JazzCash, Easypaisa, bank transfer), a feature-by-feature comparison and answers to common billing questions. Plans are paid once a year and never renew by themselves.

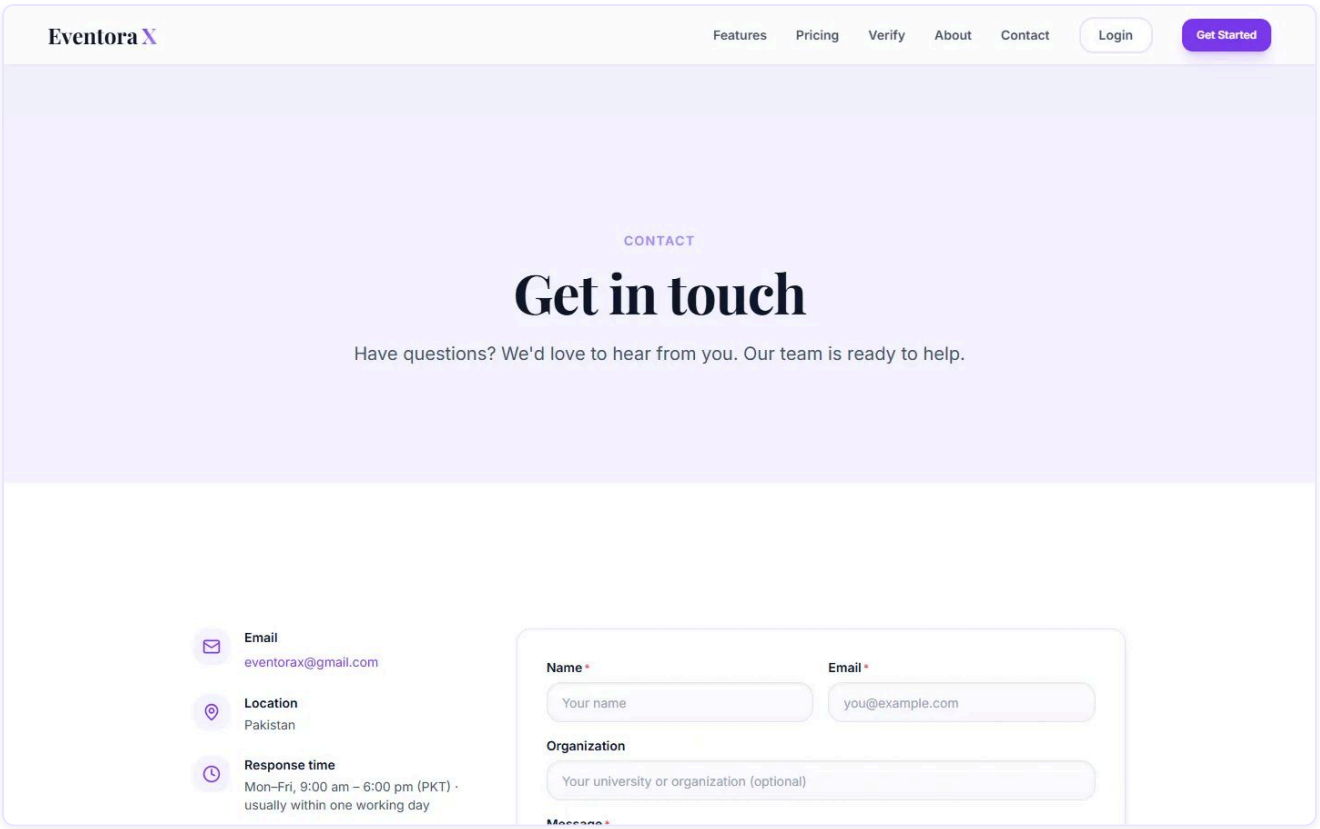

Features

Features page

A tour of everything the product does, grouped by area.

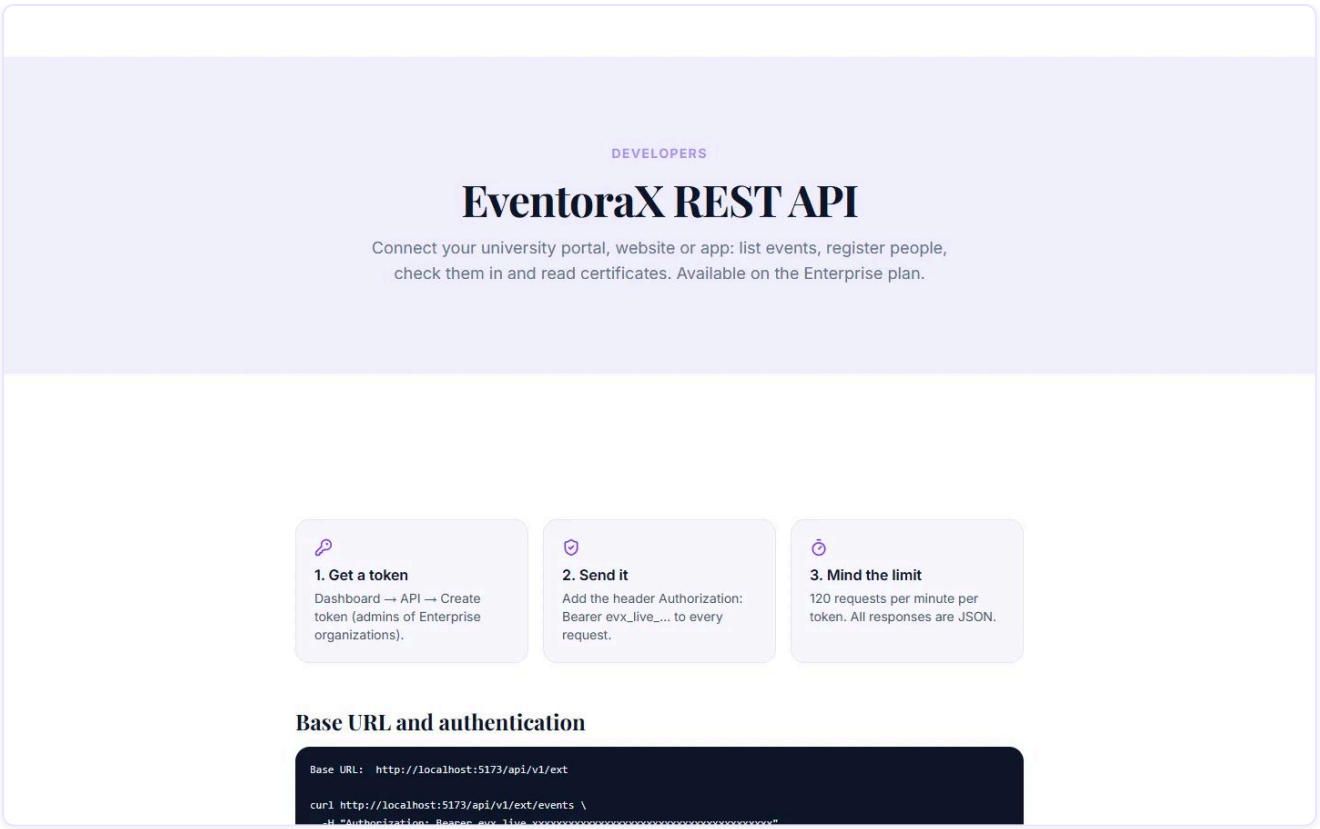

Contact

Contact page

Send a message to the EventoraX team, or use the email, WhatsApp and support hours shown next to the form. To prevent spam, a person can send up to five messages an hour.

API documentation

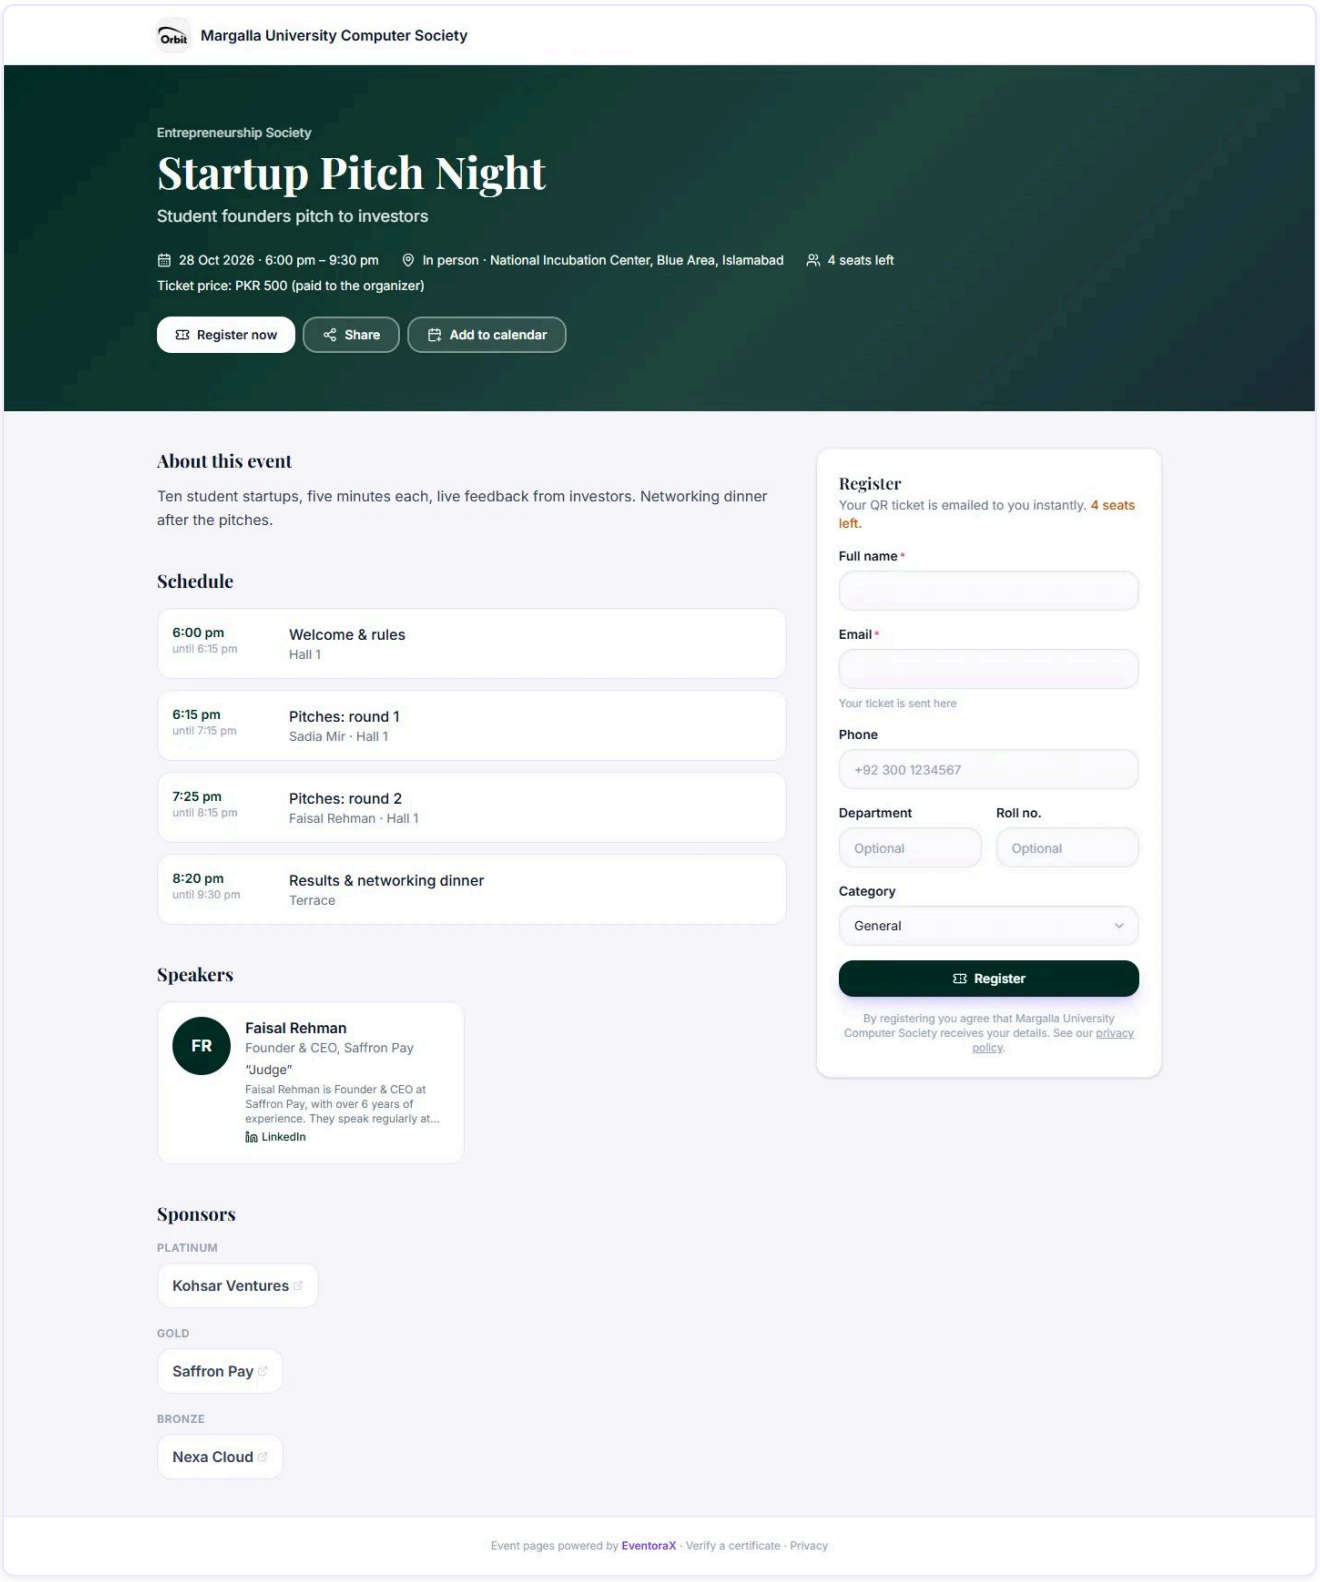

Developers page

Developers (linked as "API docs" in the footer) is the reference for organizations on the Enterprise plan that want to connect their own systems. See API tokens.

Event pages and registering (for attendees)

Every published event has its own page at an address like `your-site/e/…`. Organizers share this link or print its QR code on posters.

Public event page

The page shows, in the organization's own colours:

- the title, organizer, date and time, the venue (for online events: "the link is on your ticket"), seats left and the ticket price if there is one;
- the description, schedule, speakers and sponsors the organizer chose to make public;
- **Share** (send the link) and **Add to calendar** (adds the event to your phone or computer calendar).

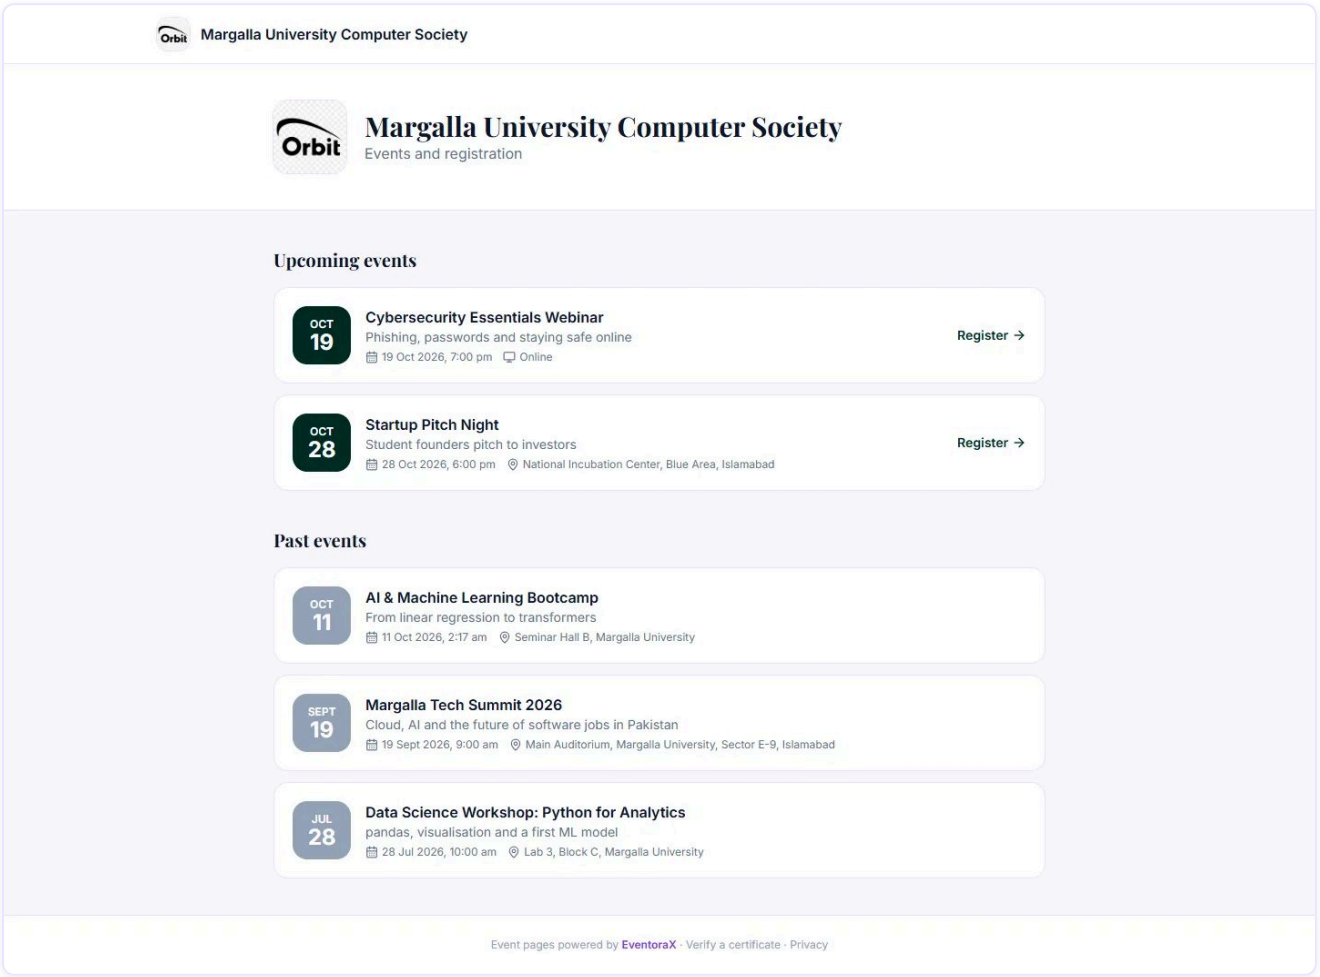

To register:

1. Fill in your full name and email (required). Phone, department, roll number and category are optional or chosen from a list.
2. Click **Register**.
3. Your **QR ticket appears on the screen** straight away, and the same ticket arrives by email as a PDF.
4. On the event day, show the QR code (on your phone or printed) at the entrance.

Good to know

- You can register only once per email address. Trying again says you're already registered.
- If the event is full, closed or over, the page says so instead of showing the form.
- The organizer receives your details. The online meeting link (for online events) is only on your ticket.

Organization page

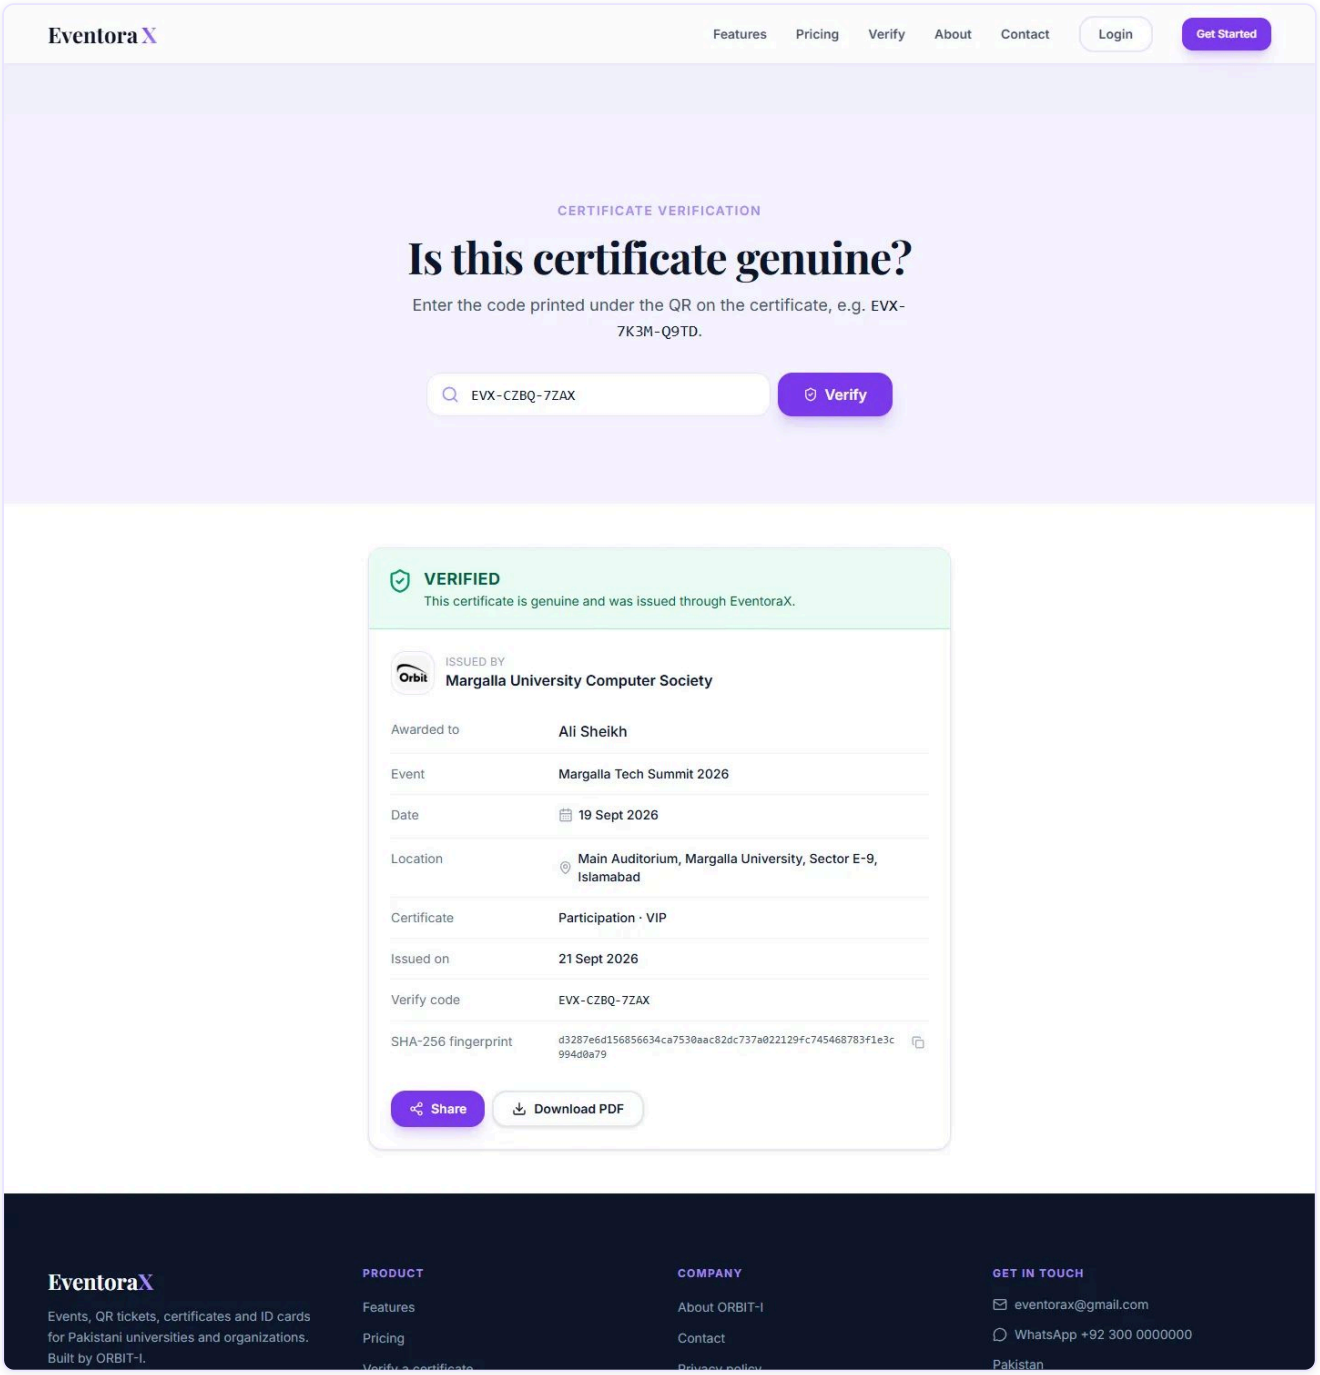

Organization page

Each organization has a page at `your-site/o/<name>` listing its upcoming events (with a **Register** button) and past events.

Verifying a certificate

Every certificate has a QR code and a verify code such as `EVX-CZBQ-7ZAX`. Employers, universities or anyone else can check it is genuine:

1. Scan the QR on the certificate, **or** open **Verify** in the website menu and type the code.
2. Click **Verify**.

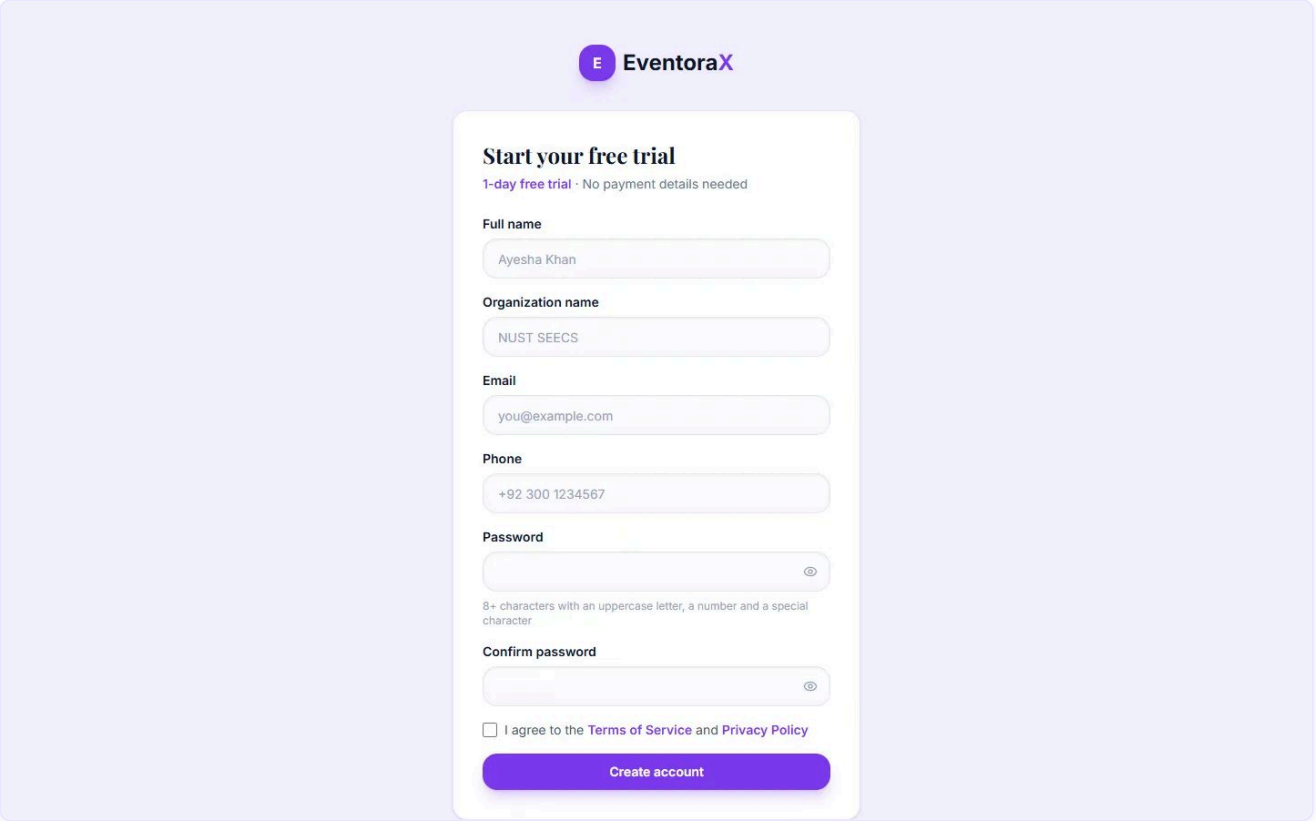

Verified certificate

- **VERIFIED** (green): the certificate is genuine. You see who issued it, who it was awarded to, the event and the date, and you can download the original PDF.
- **REVOKED** (red): the organization withdrew this certificate. The reason is shown.
- **Not found**: the code is wrong or the certificate was never issued through EventoraX.

Email addresses and phone numbers are never shown on this page.

2. Getting started

Create your organization

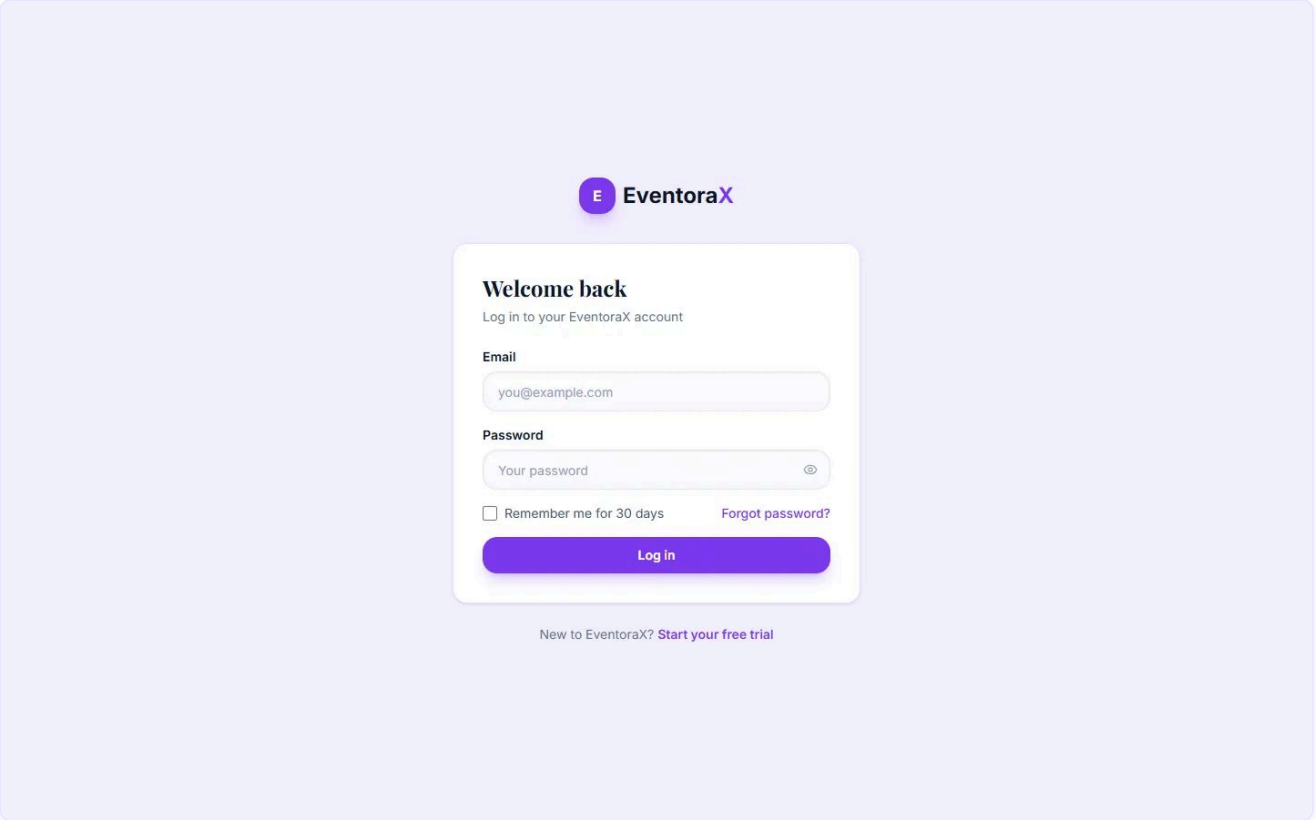

Sign-up form

1. On the website click **Get Started** (or **Start Free Trial**).
2. Enter your name, your organization's name, email, phone and a password (at least 8 characters with an uppercase letter, a number and a special character).
3. Tick that you agree to the Terms and Privacy Policy and click **Create account**.
4. You go straight to your dashboard. Check your inbox and click the link to **verify your email**; until you do, a yellow strip at the top reminds you (with **Resend email**).

You start with a **free trial of the Pro plan**. Its length is shown on the sign-up page. You become the organization's first **admin**.

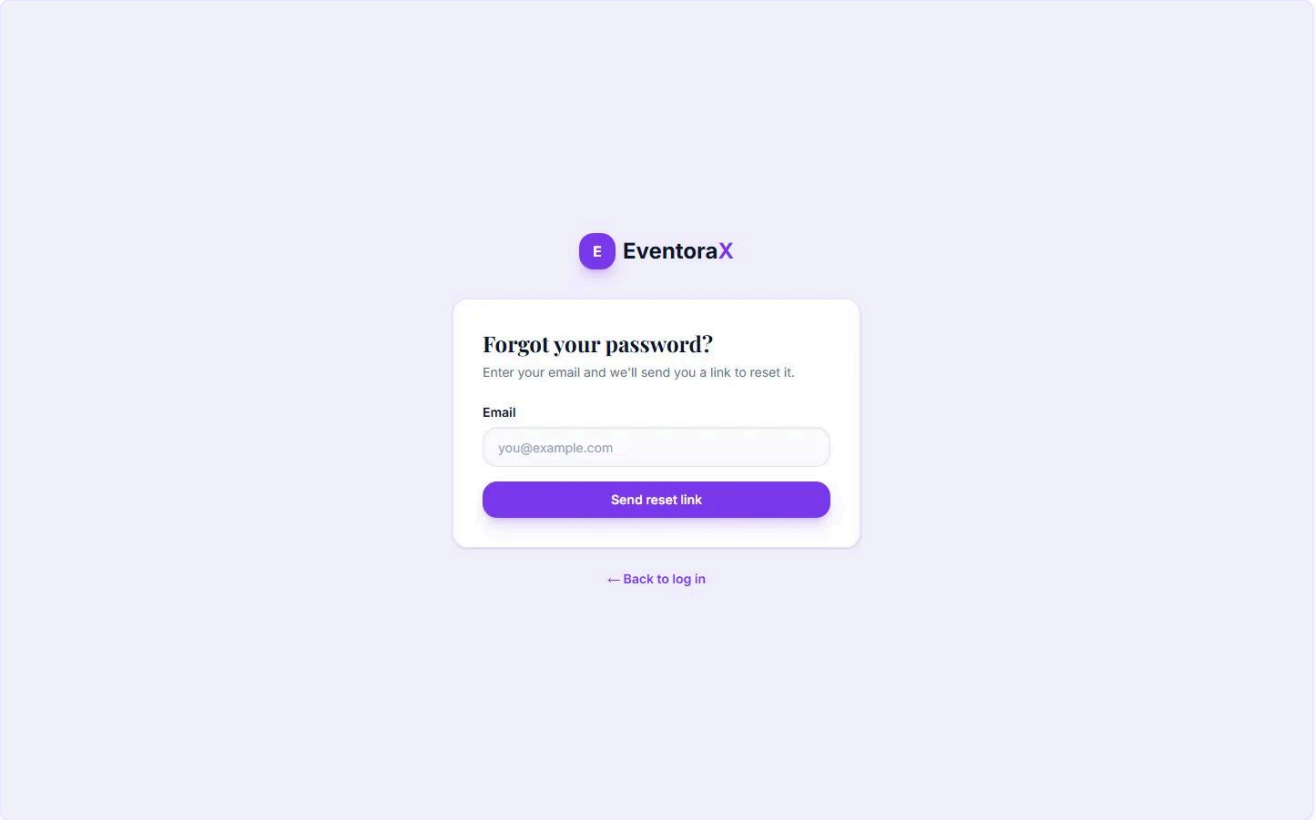

Log in

Login page

- Enter your email and password. Tick **Remember me** on your own computer to stay logged in.
- After **5 wrong passwords in 15 minutes** the account is locked for 15 minutes, to stop people guessing.
- If you turned on **two-factor login**, a second step asks for the 6-digit code from your phone (see My account).

Forgot your password?

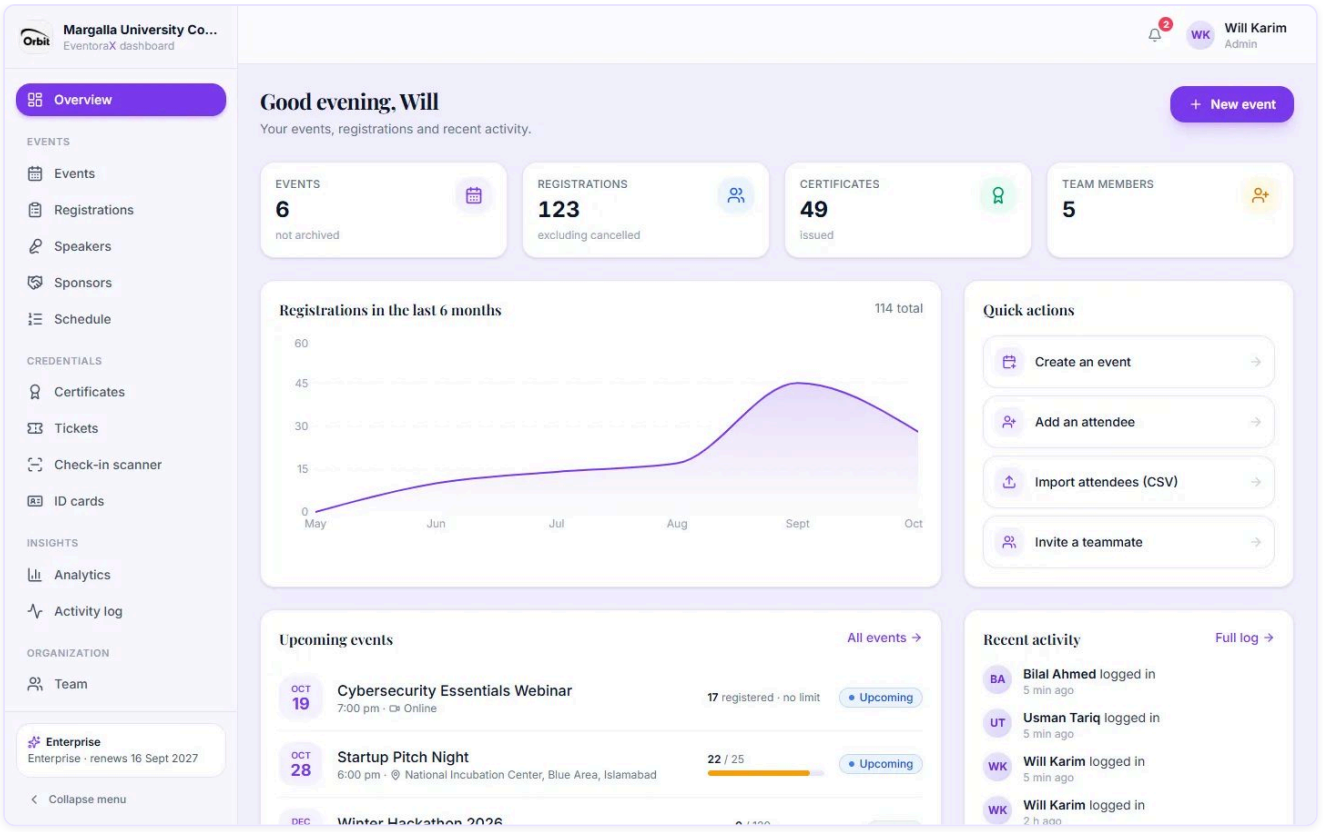

Forgot password

Click **Forgot password?** on the login page, enter your email and open the link you receive (valid for 15 minutes). Choose a new password. For your safety, you are logged out on every other device.

Joining a team

If an admin invited you, you get an email with an **Accept invite** link (valid for 7 days). Open it, choose your name and password, and you're in with the role the admin picked.

The dashboard

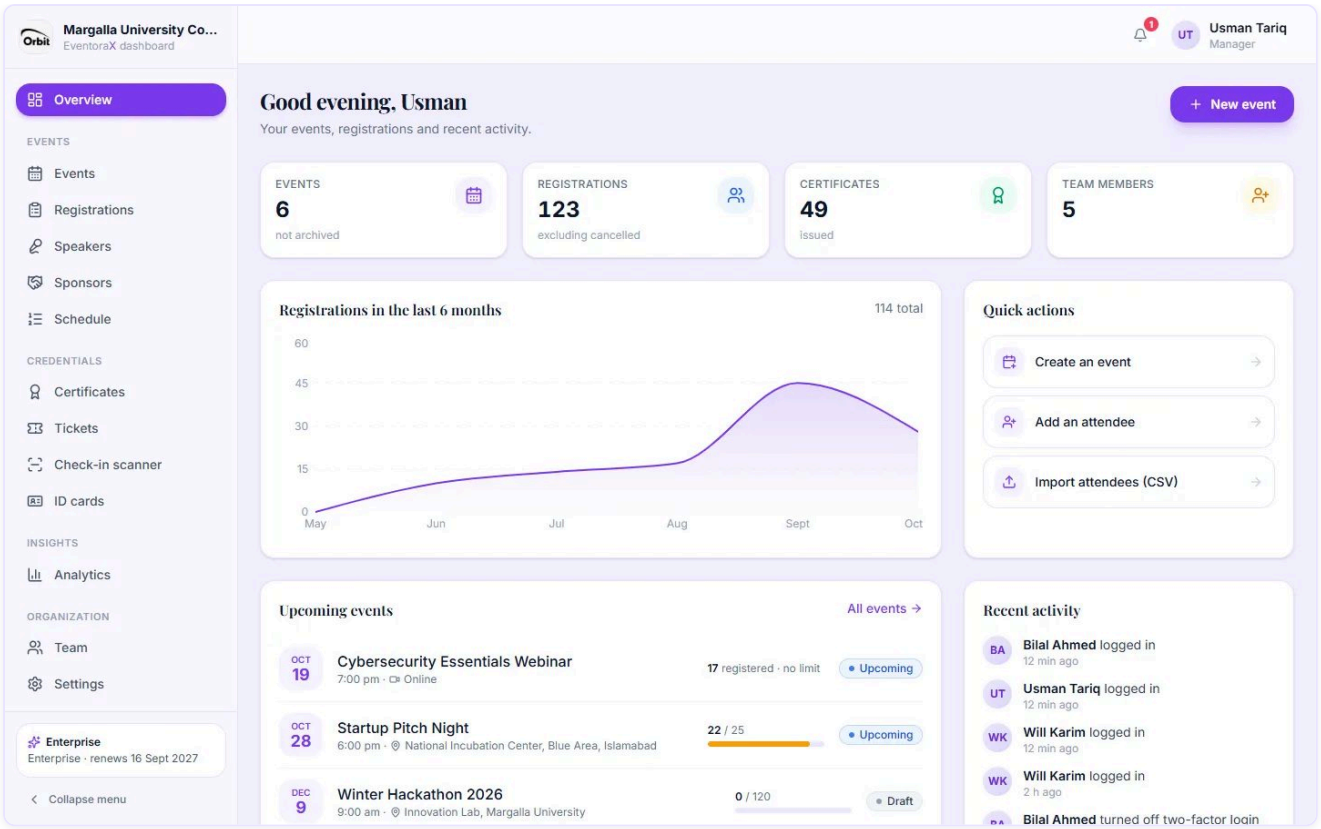

Dashboard overview

Overview is the first page after logging in: your number of events, registrations, certificates and team members, registrations over the last six months, quick actions, upcoming events and recent activity.

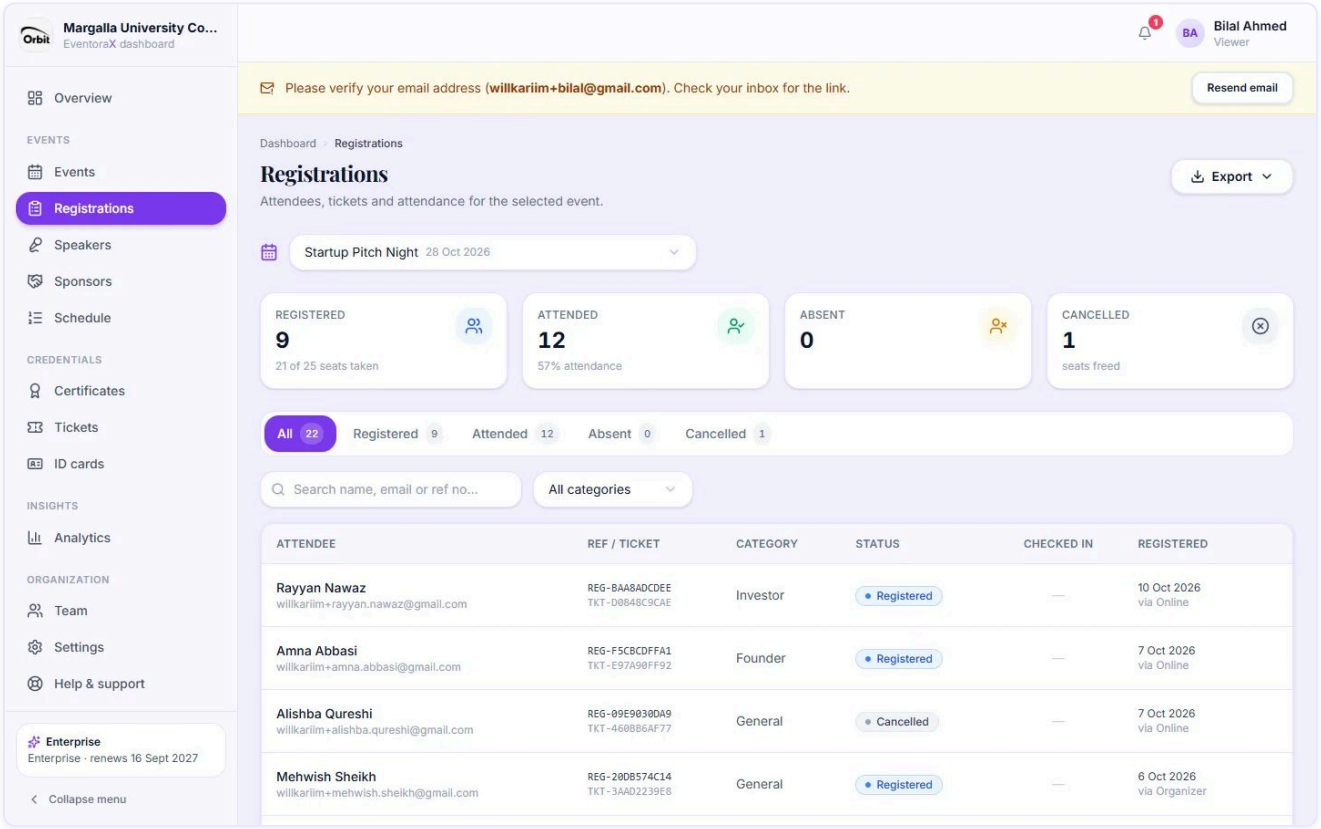

- **Left menu:** grouped into Events, Credentials, Insights and Organization. **Collapse menu** at the bottom makes it narrow. The card above it shows your plan and when it renews.
- **Top right:** the bell (notifications) and your name. Click your name for your account settings and **Log out**.
- On a phone, the menu opens from the button at the top left.

What managers and viewers see

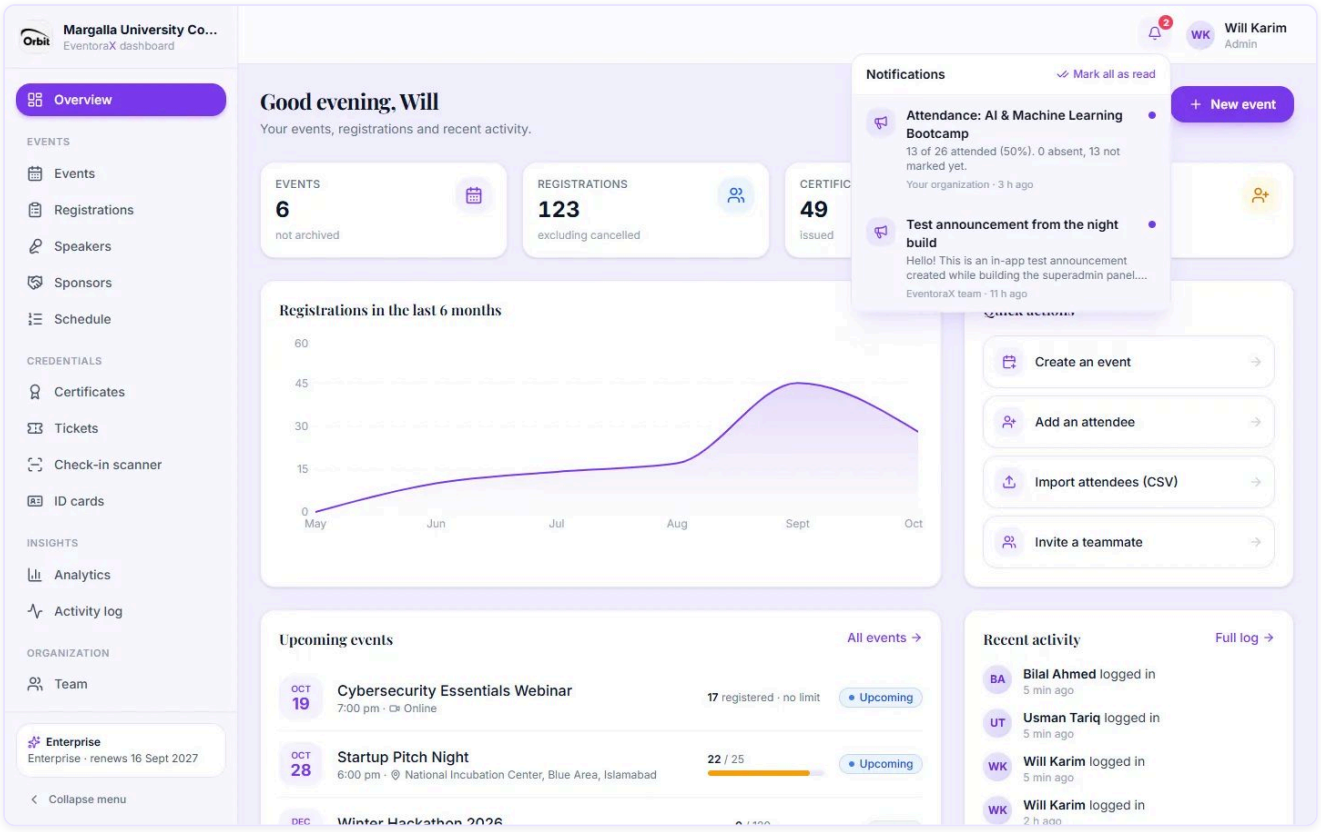

Manager overview

Managers see the same dashboard without the admin-only pages (Activity log, Billing, API). Viewers also don't see the check-in scanner or any create, edit or delete buttons, for example on Registrations:

Viewer registrations

Notifications

Notification bell

The bell shows how many unread notifications you have. Click it to see the latest ones; click a notification to read it in full or to open the page it's about. **Mark all as read** clears the count. You get notifications for:

- announcements from the EventoraX team;
- new registrations from your public event pages, attendance summaries after events, finished certificate emails (admins, and only if switched on in Settings → Notifications).

Trial, expiry and suspension

A banner at the top of the dashboard tells you when your trial or plan is about to end. Admins also get an email **3 days before** the end date.

When the plan **expires**, nothing is deleted. Overview, Billing, Settings and Help & support keep working so you can pay; the other pages are locked until the payment is confirmed. See Billing.

If the EventoraX team **suspends** an organization, its members can't log in and see the reason the team gave.

Things that work the same everywhere

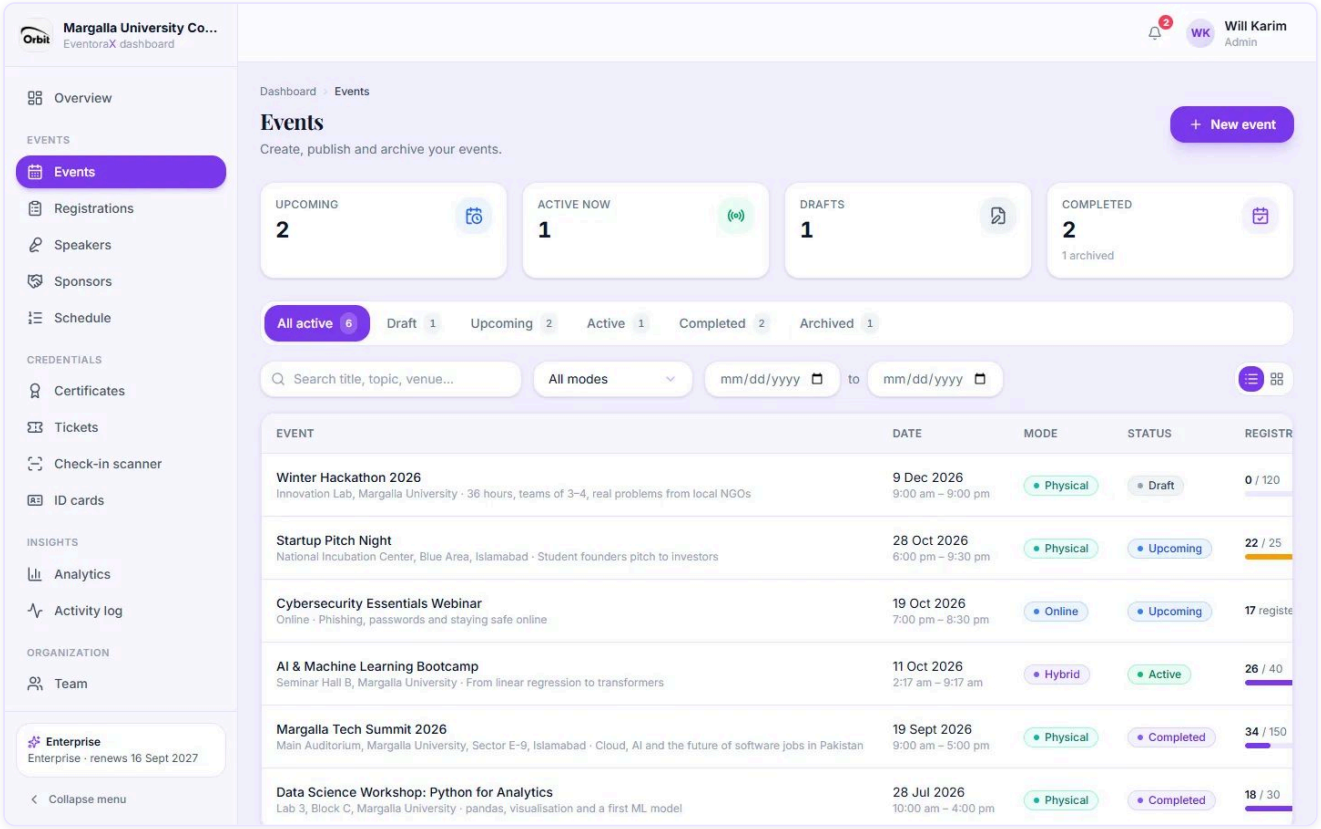

- **Event picker:** pages that work on one event (Registrations, Speakers, Certificates, Tickets…) have an event picker at the top. Your choice is remembered when you move between pages.
- **Filters and search** are kept in the page address, so you can bookmark or share a filtered view.

- **Unsaved changes:** if you try to leave a form you've changed, you're asked first.
- **Undo:** many quick actions (hiding a speaker, changing a status) show a message with **Undo** for a few seconds.
- **Dangerous actions** (delete, revoke, cancel) always ask you to confirm first.

3. Events, speakers, sponsors and schedule

Admins and managers can create and edit. Viewers can look.

Events list

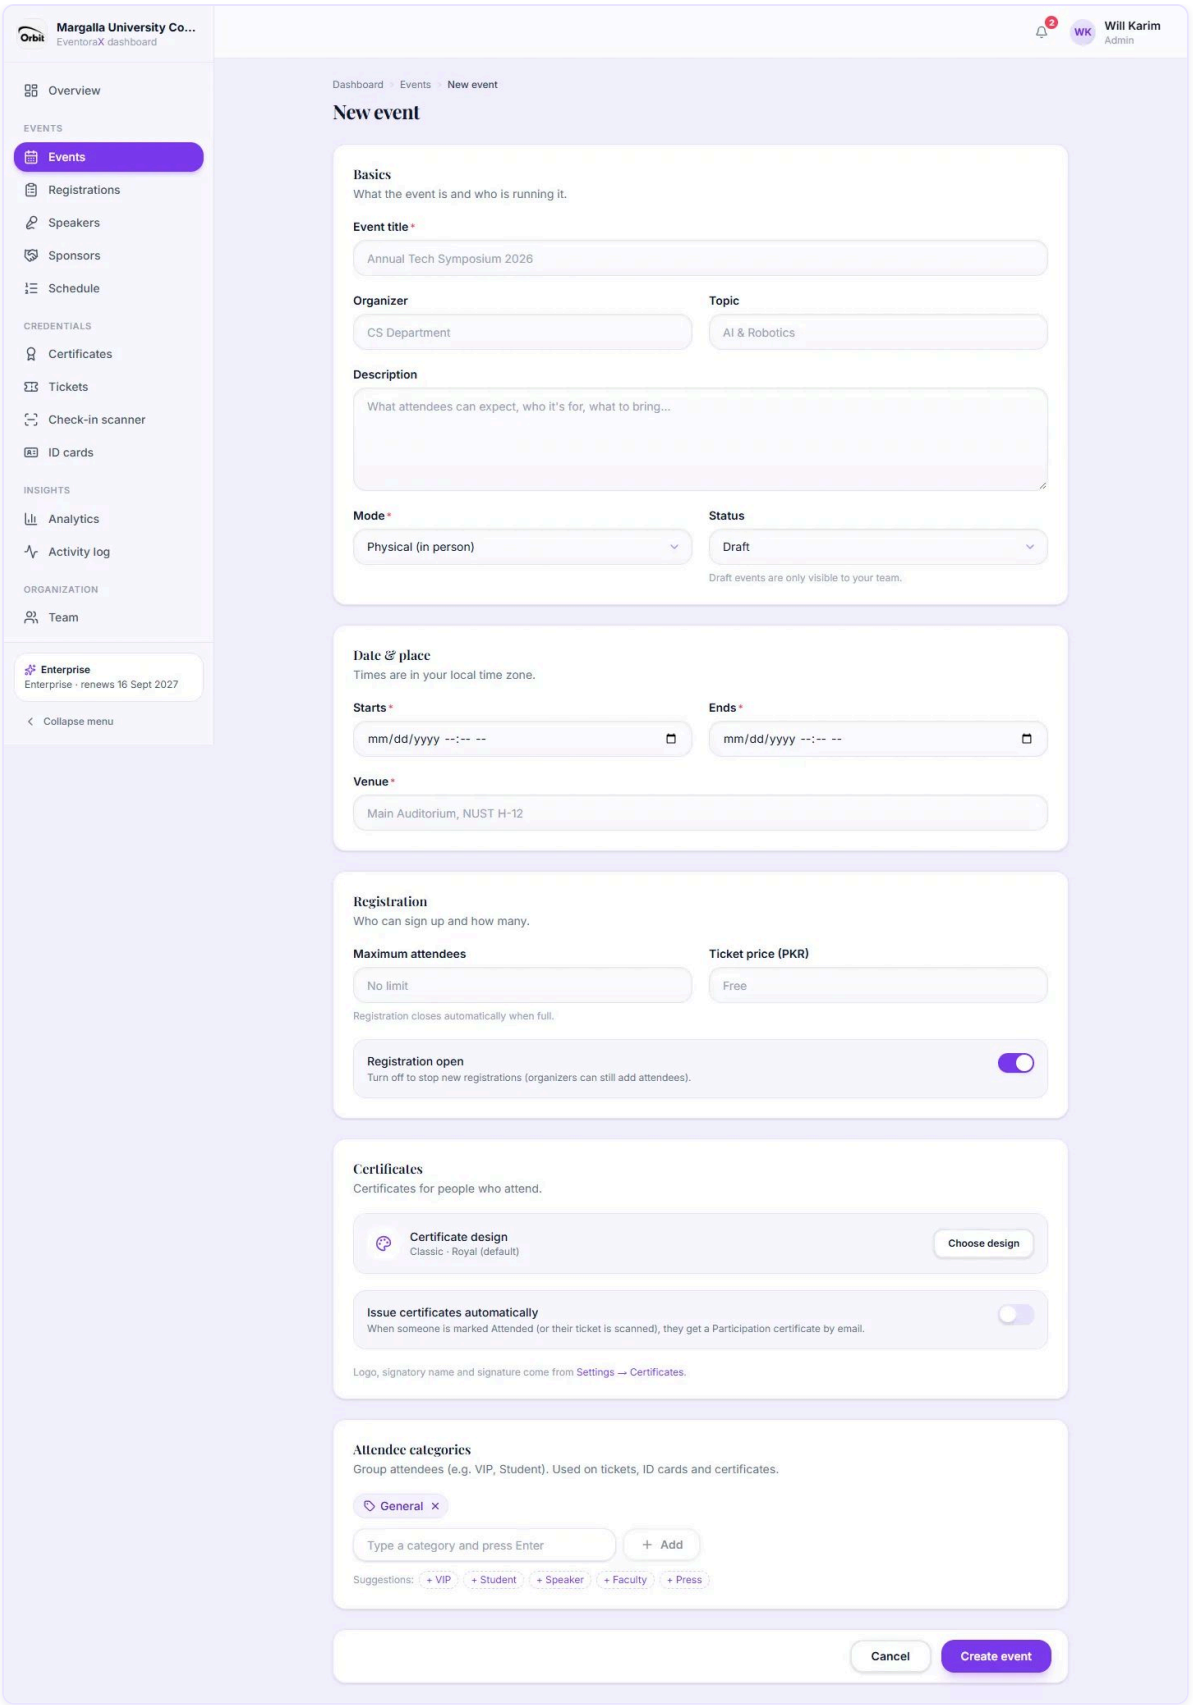

Events list

Events in the left menu lists all your events.

- The cards at the top count upcoming, active, draft and completed events.
- The tabs filter by status: **All active**, **Draft**, **Upcoming**, **Active**, **Completed**, **Archived**.
- Search by title, topic or venue, filter by mode or date range, and switch between the list and the card view (buttons on the right).
- The **Registrations** column shows how full each event is.
- The ⋯ menu on each row: **Open**, **Edit**, **Duplicate** (a copy as a draft, handy for yearly events), **Archive** / **Restore**, and **Delete** (only for events without registrations; events with registrations are archived instead, so no attendee data is ever lost).

Create or edit an event

New event form

Click **New event**. The form has five parts:

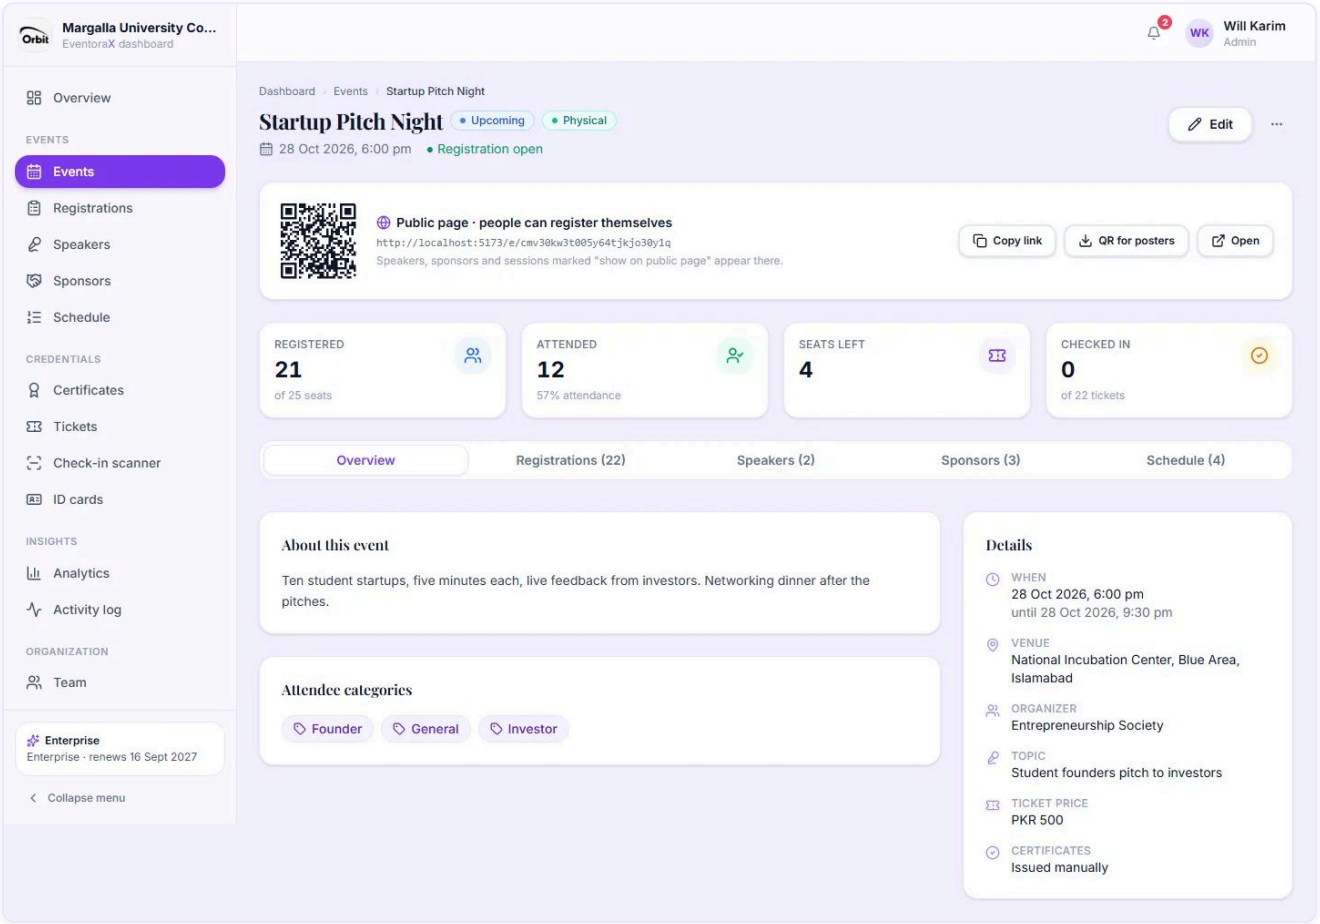

1. **Basics:** title (required), organizer (for example the department running it), topic, description, **mode** (Physical, Online, Hybrid) and **status**. Keep it as **Draft** while you prepare; only your team can see drafts.

Set it to **Upcoming** to publish it and open the public page.

2. **Date & place:** start and end (required), the venue, and for online or hybrid events the meeting link (only attendees see it, on their ticket).
3. **Registration:** maximum attendees (empty = no limit; registration closes automatically when full), ticket price in PKR (empty = free, payment is handled by you), and **Registration open** (switch off to stop new sign-ups; you can still add people yourself).
4. **Certificates:** the certificate design for this event (**Choose design**) and **Issue certificates automatically** (when someone is marked Attended or their ticket is scanned, they get a Participation certificate by email).
5. **Attendee categories:** groups such as VIP, Student, Speaker. Type a name and press Enter, or click a suggestion.

Click **Create event** (or **Save changes**). Fields with a problem are marked in red with an explanation underneath.

Event page (the event hub)

Event hub

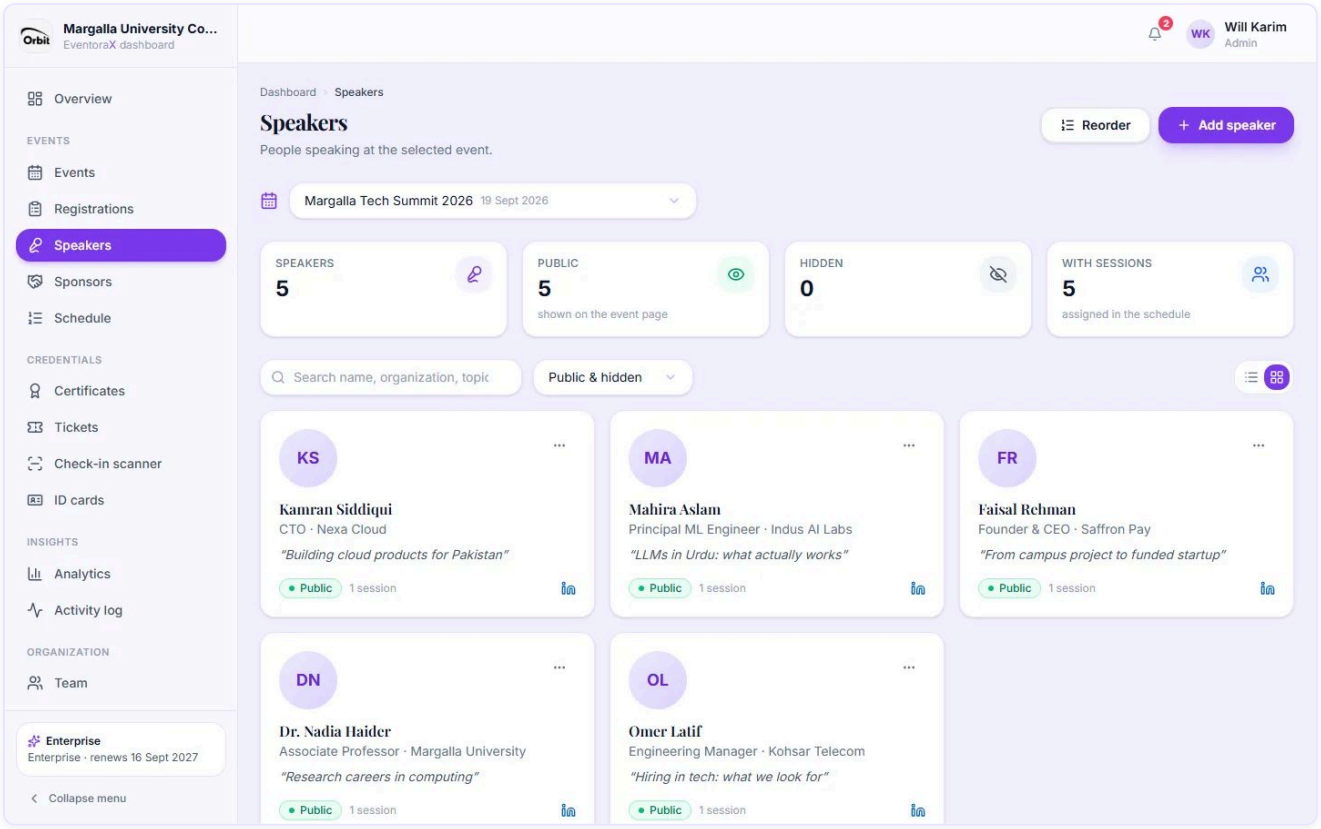

Click an event to open its hub.

- **Public page card** (only for published events): the link people use to register. **Copy link**, **QR for posters** (downloads a QR image to print) and **Open**. Drafts explain how to get a public page.
- **Numbers:** registered (out of the seat limit), attended, seats left, checked in.

- **Tabs:** Overview (description, categories, details), Registrations, Speakers, Sponsors and Schedule of this event.
- **Edit** and the ⋯ menu (Duplicate, Archive, Delete) are at the top right.

Archived events are read-only. Restore them to make changes.

Speakers

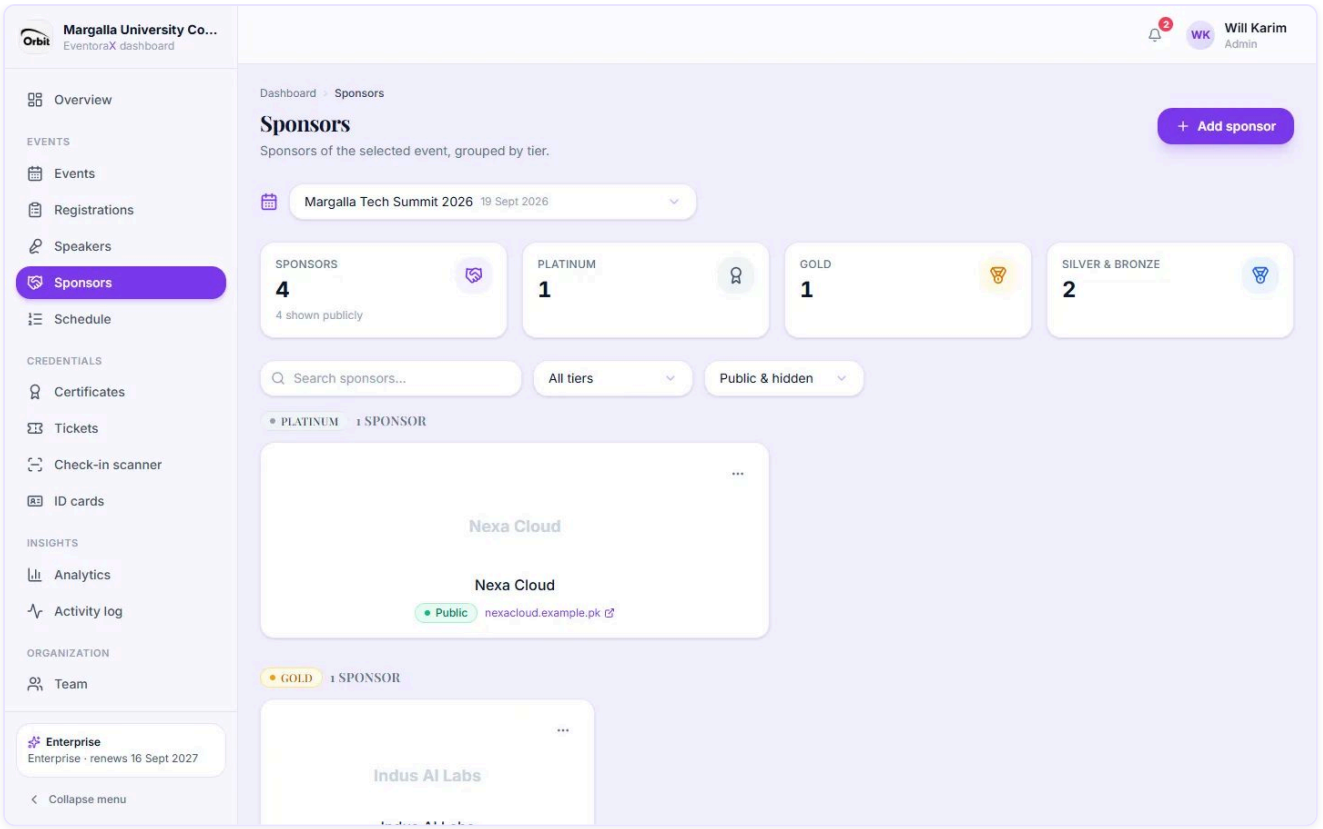

Speakers

People speaking at the selected event, as cards or a list.

- **Add speaker:** first and last name, job title, organization, talk or session topic, bio, photo and LinkedIn profile.
- **Public / hidden:** only public speakers appear on the public event page. Toggle it from a speaker's ⋯ menu (with **Undo**).
- **Reorder:** drag speakers into the order they should appear on the public page.
- The cards at the top count speakers, public, hidden and how many have a session in the schedule.

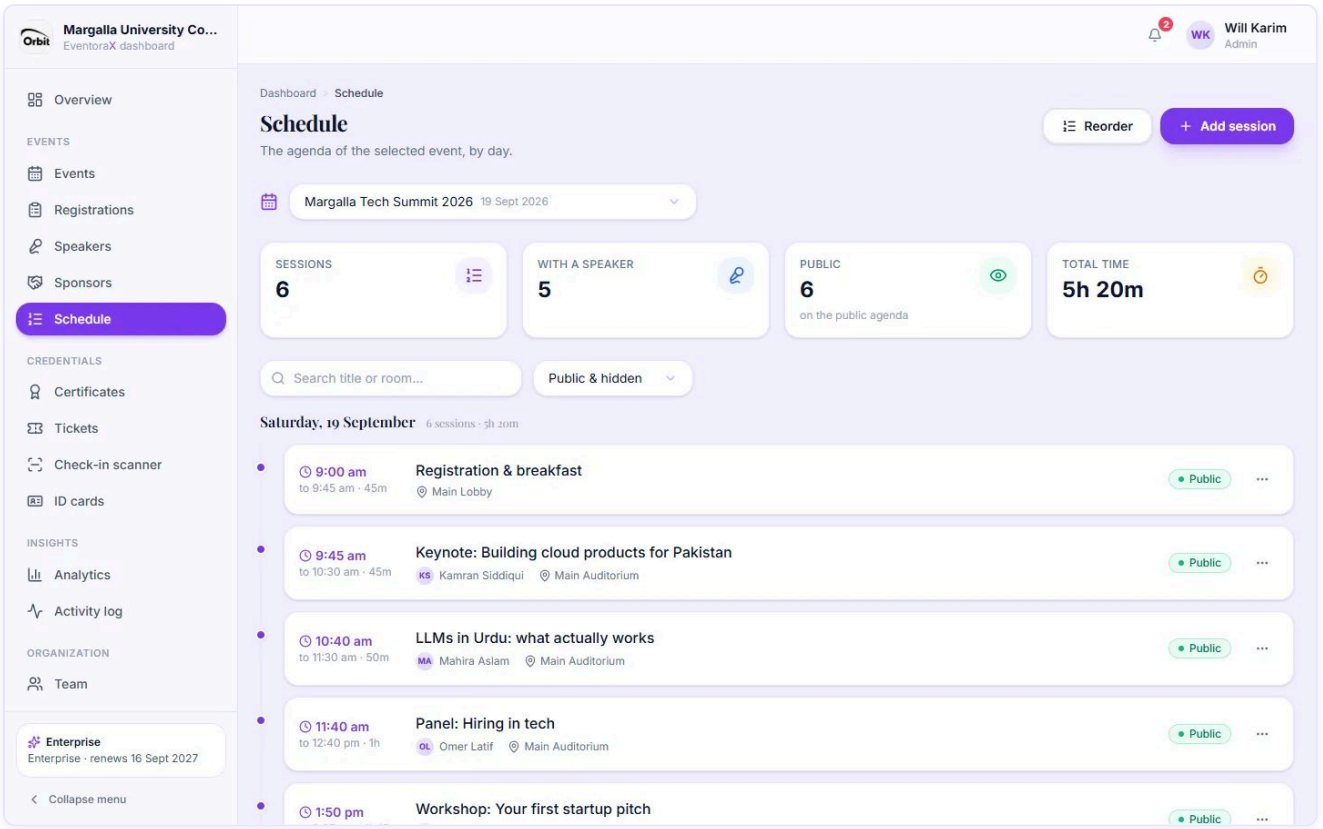

Sponsors

Sponsors

The selected event's sponsors with their logo, website and **tier** (for example Platinum, Gold, Bronze). Public sponsors appear on the event page grouped by tier. **Add sponsor** to add one; ⋯ to edit, hide or delete.

Schedule

Schedule

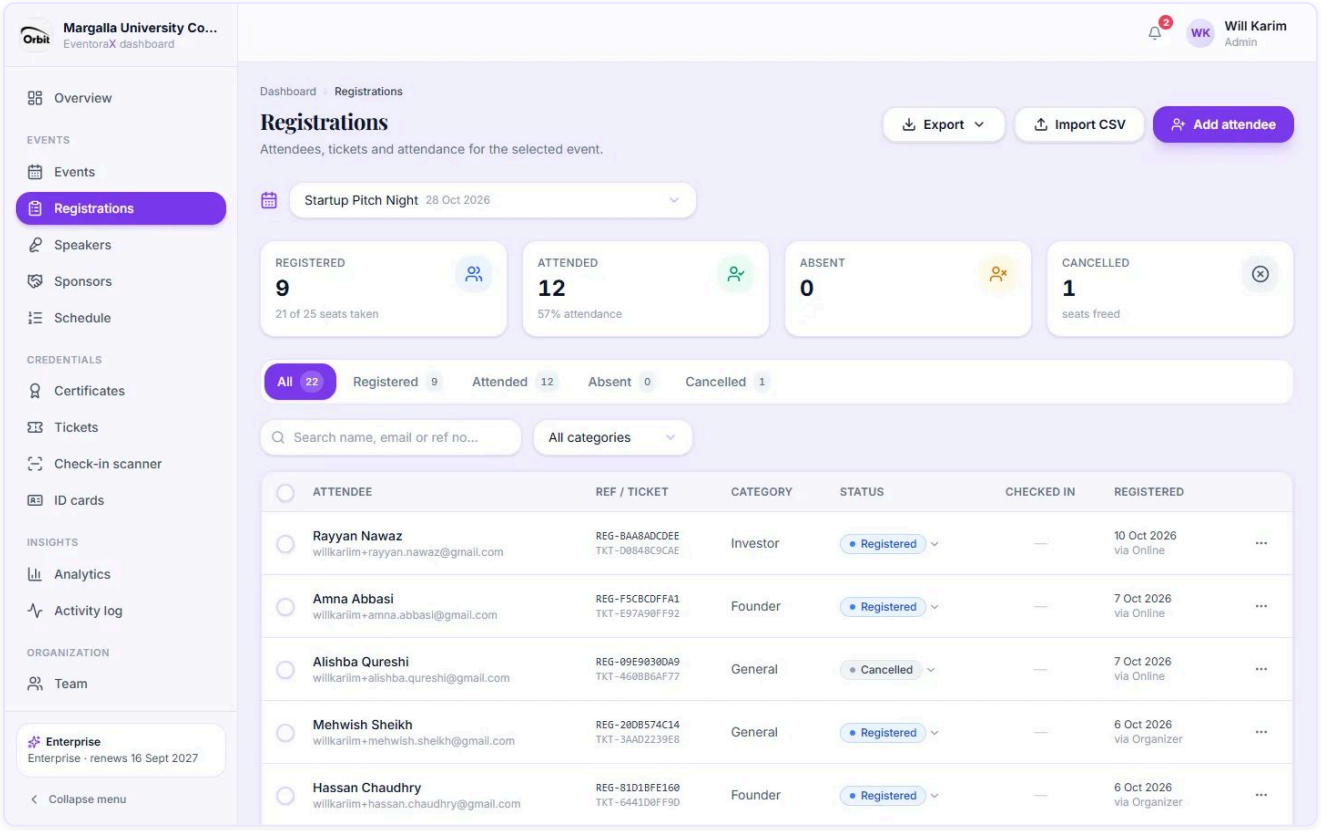

The agenda of the selected event, grouped by day.

- **Add session:** title, start and end time, room or location, and the speaker (from this event's speakers).
- Each session can be public or hidden, like speakers.
- **Reorder** changes the order of sessions that start at the same time.
- The cards show the number of sessions, how many have a speaker, how many are public and the total time.

4. Registrations

Admins and managers can add, import and change attendees. Viewers can look and export.

The attendee list

Registrations

Registrations shows everyone registered for the event chosen in the picker at the top.

- **Cards:** registered (and seats taken out of the limit), attended (with the attendance rate), absent, cancelled.
- **Tabs:** All, Registered, Attended, Absent, Cancelled. Search by name, email or reference number; filter by category.
- **Columns:** the person, their registration number (`REG-…`) and ticket number (`TKT-…`), category, status, when they checked in, and when and how they registered (**Online** = the public event page, **Organizer** = added by your team, **CSV** = imported, **API** = from a connected system).
- **Change a status** with the small arrow next to it: Registered, Attended, Absent or Cancelled.
- **⋯ menu: Edit**, **Send email** (a message you write), **Cancel registration** / **Restore registration**, **Delete**.

What the statuses mean

Status	Meaning
Registered	Signed up, not checked in yet

Status	Meaning
Attended	Was there. Set automatically when their ticket is scanned. Needed for Participation and Achievement certificates.
Absent	Didn't come. Keeps the seat.
Cancelled	Frees the seat. Gets no certificate and no emails. Can be restored later if there are seats left.

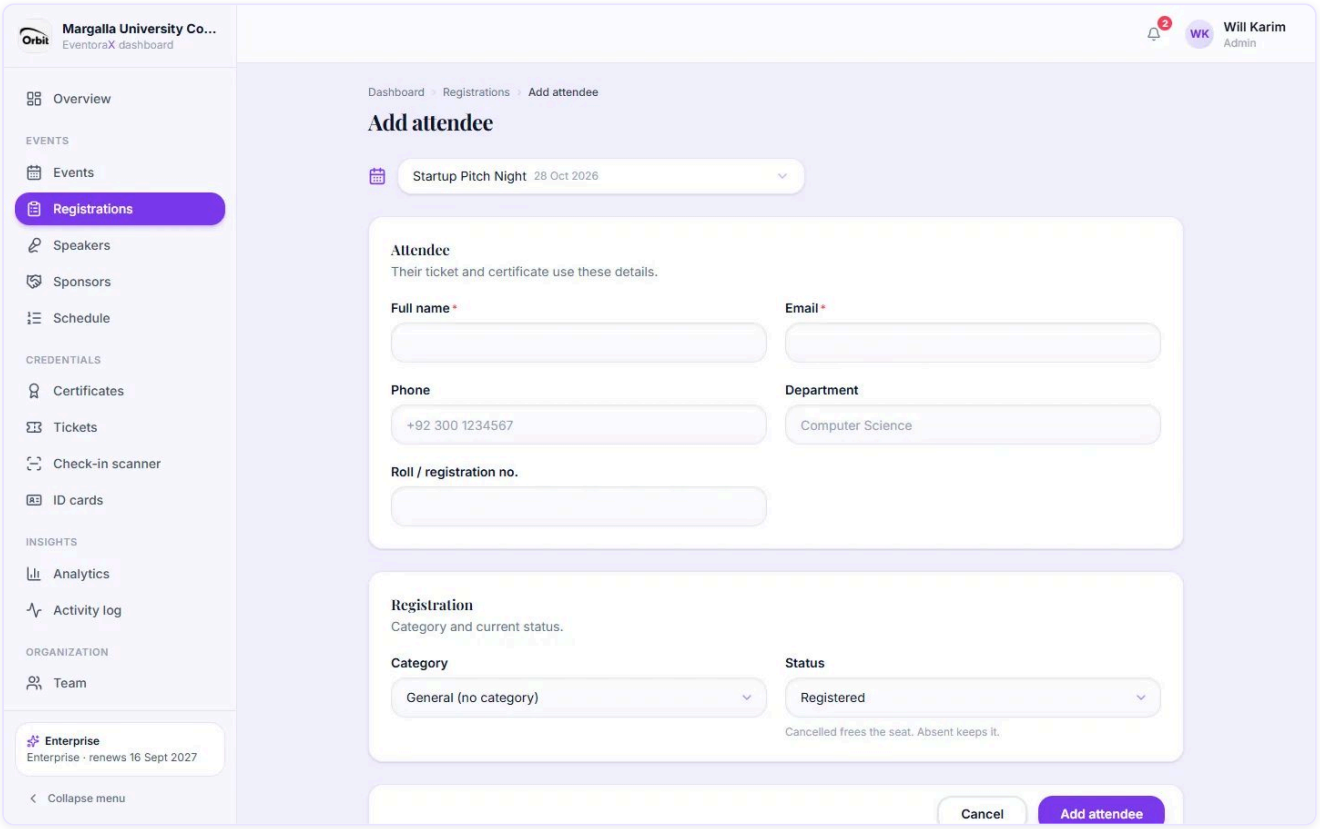

Working with many people at once

Tick the circles at the start of rows (or the one in the header for the whole page). A bar appears with **Attended**, **Absent**, **Email** and **More** (mark as Registered, cancel, restore, export just the selected people).

Export

Export (top right) downloads the list as **Excel** or **CSV**, with the current filters applied.

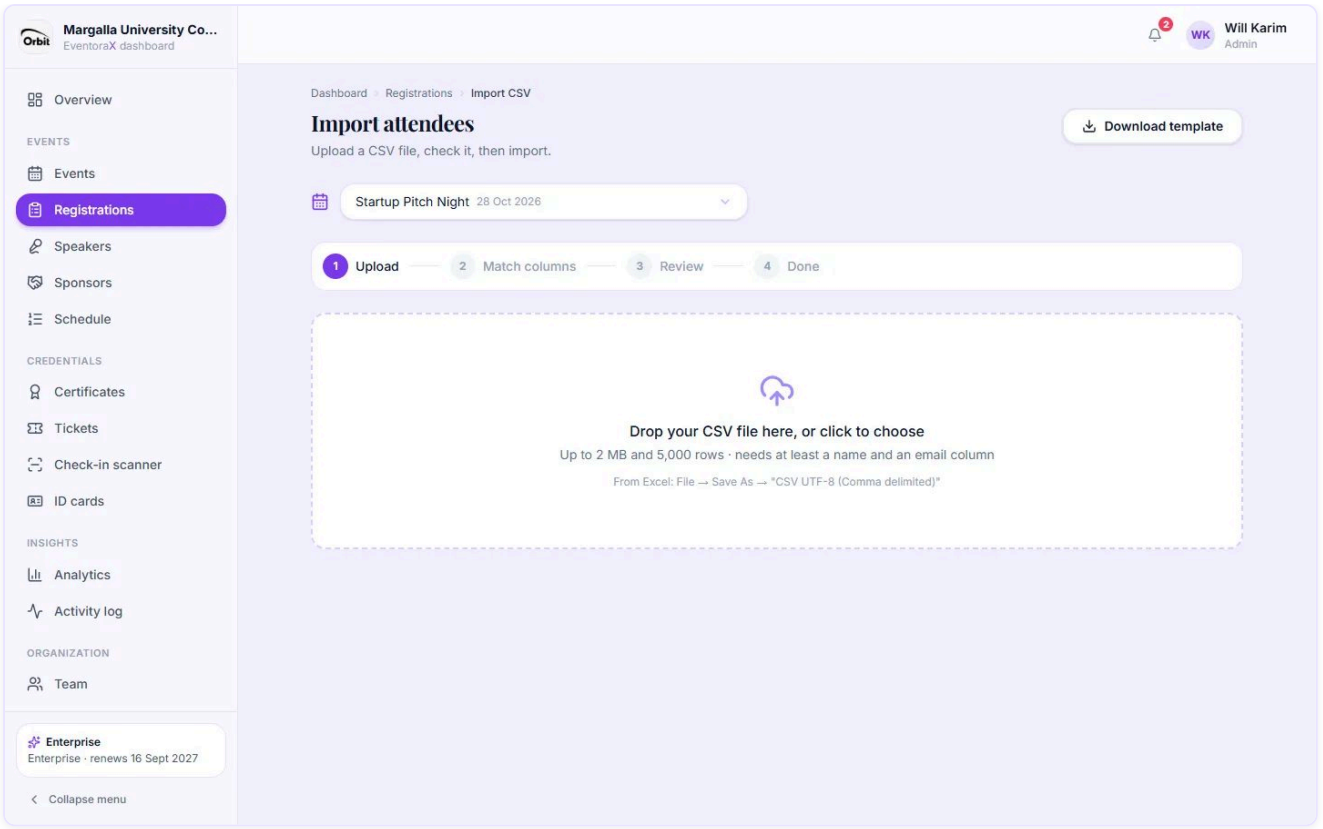

Add one attendee

Add attendee

Click **Add attendee**. Enter the full name and email (required), and optionally phone, department, roll or registration number and category. Click save: the person is added and their ticket is created straight away. Organizers can add people even when public registration is closed.

Import from a CSV file

Import attendees

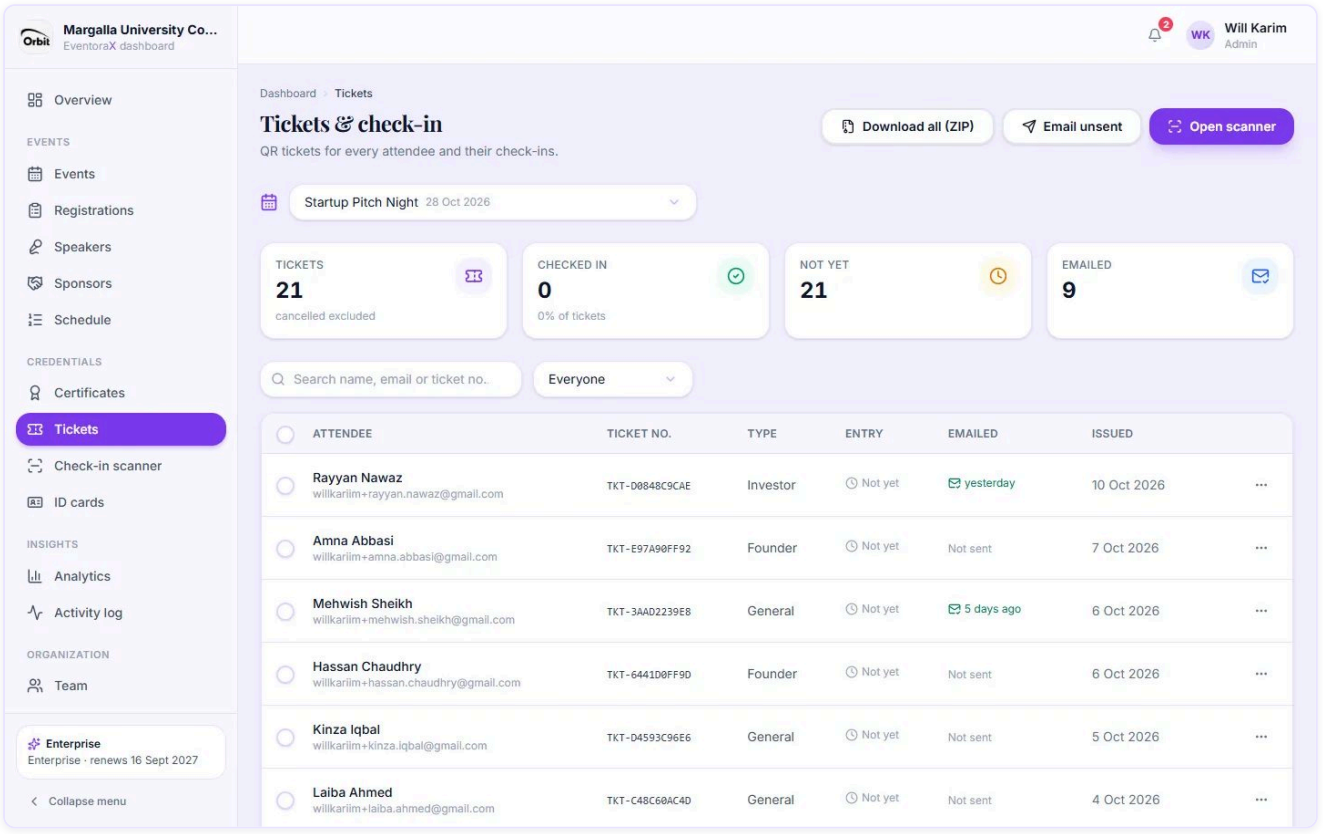

For many people at once, for example a list exported from Google Forms or Excel.

1. Click **Import CSV**. Optionally click **Download template** for a file with the right columns.
2. **Upload:** drop the file in the box or click to choose it (up to 2 MB and 5,000 rows; it needs at least a name and an email column). From Excel use *File → Save As → CSV UTF-8 (Comma delimited)*.
3. **Match columns:** EventoraX guesses which column is which (name, email, phone, department, roll number, category). Fix any wrong guesses.
4. **Review:** a test run shows how many rows will be added, which will be skipped and why (invalid email, already registered, event full). If the same email appears twice in the file, choose **Keep the first one**, **Keep the last one** or **Skip all copies**. Categories that don't exist yet can be created. Nothing is saved until you confirm.
5. **Done:** everyone added has a ticket. You can download the skipped rows as a CSV to fix and import again.

5. Tickets and check-in

Every registration automatically gets a ticket with a unique QR code and a ticket number like `TKT-D0848C9CAE`.

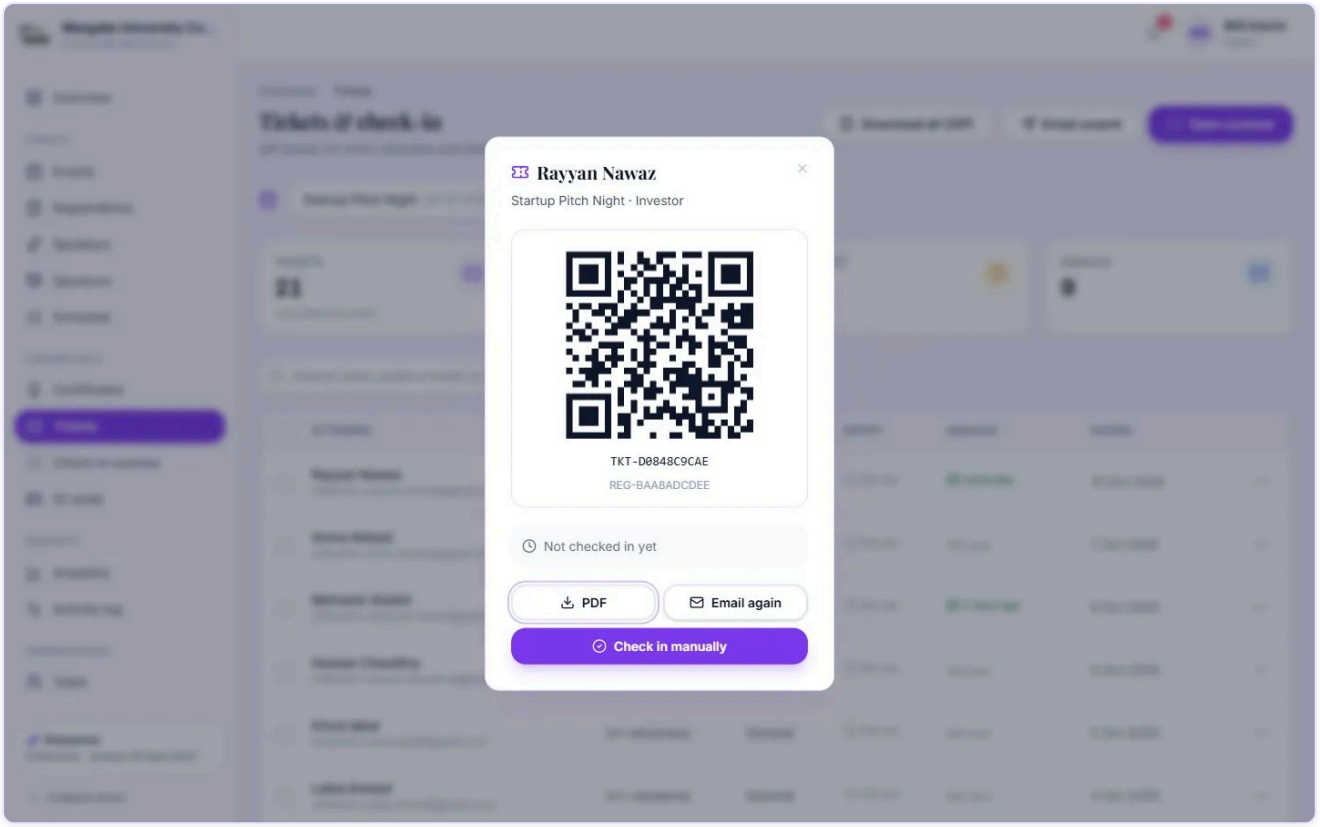

Tickets page

Tickets

Tickets lists the tickets of the selected event: who has checked in and when, and whether the ticket was emailed.

- Filter by checked in / not checked in and by emailed / not emailed, or search.
- **Download all (ZIP)**: every ticket as a PDF in one ZIP file, for printing.
- **Email unsent**: emails the ticket to everyone who hasn't received it yet. **Open scanner** opens the check-in scanner.
- Tick rows to **Download ZIP** or **Email selected** for just those people.
- ⋯ **menu** on a row: **Show QR**, **Download PDF**, **Check in manually**, **Undo check-in**.

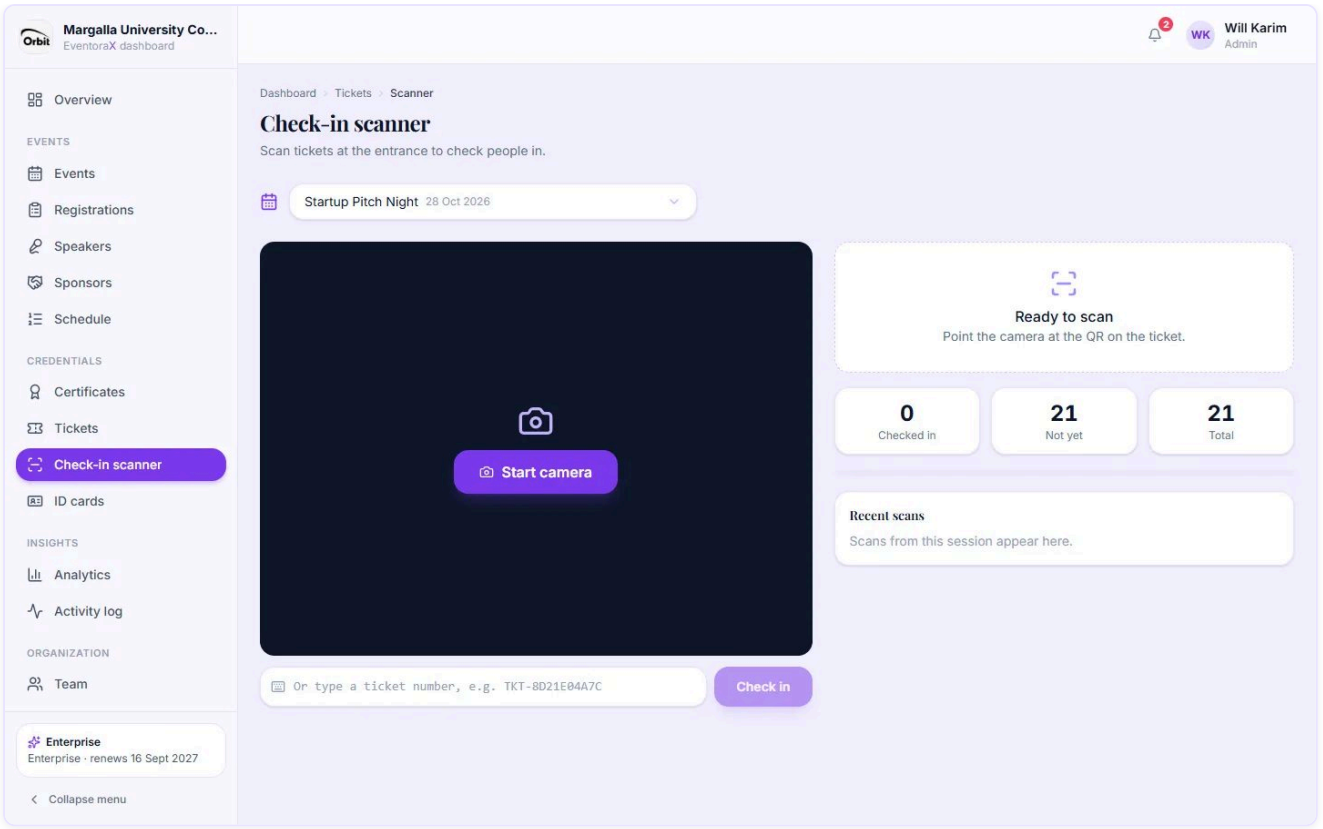

Ticket with QR

Show QR opens the ticket on screen. Useful at the door when someone forgot their phone: find them and click **Check in manually**.

Check-in scanner

Admins and managers.

Check-in scanner

Use a phone or laptop at the entrance.

1. Open **Check-in scanner** in the menu and pick the event.
2. Click **Start camera** and allow camera access when the browser asks.
3. Point the camera at the attendee's QR code (on their phone, printed ticket or ID card).
4. The panel on the right turns green with their name: they are checked in and marked **Attended**. If the event gives certificates automatically, their certificate is emailed.

- Scanning the same ticket again shows **already checked in** and when. The first scan counts.
- A ticket for another event is refused.
- No camera? Type the ticket number in the box under the camera and click **Check in**.
- The counters show checked in, not yet and total; **Recent scans** lists this session's scans.

> The camera only works on a secure (`https://`) website or on the computer running the app. Several phones can scan at the same time.

6. Certificates

Admins and managers issue, email and revoke. Viewers can look and download.

Each certificate is a PDF with the attendee's name, the event, your logo and signatory, a QR code and a unique **verify code**. Anyone can check it on the public verify page.

Certificate types

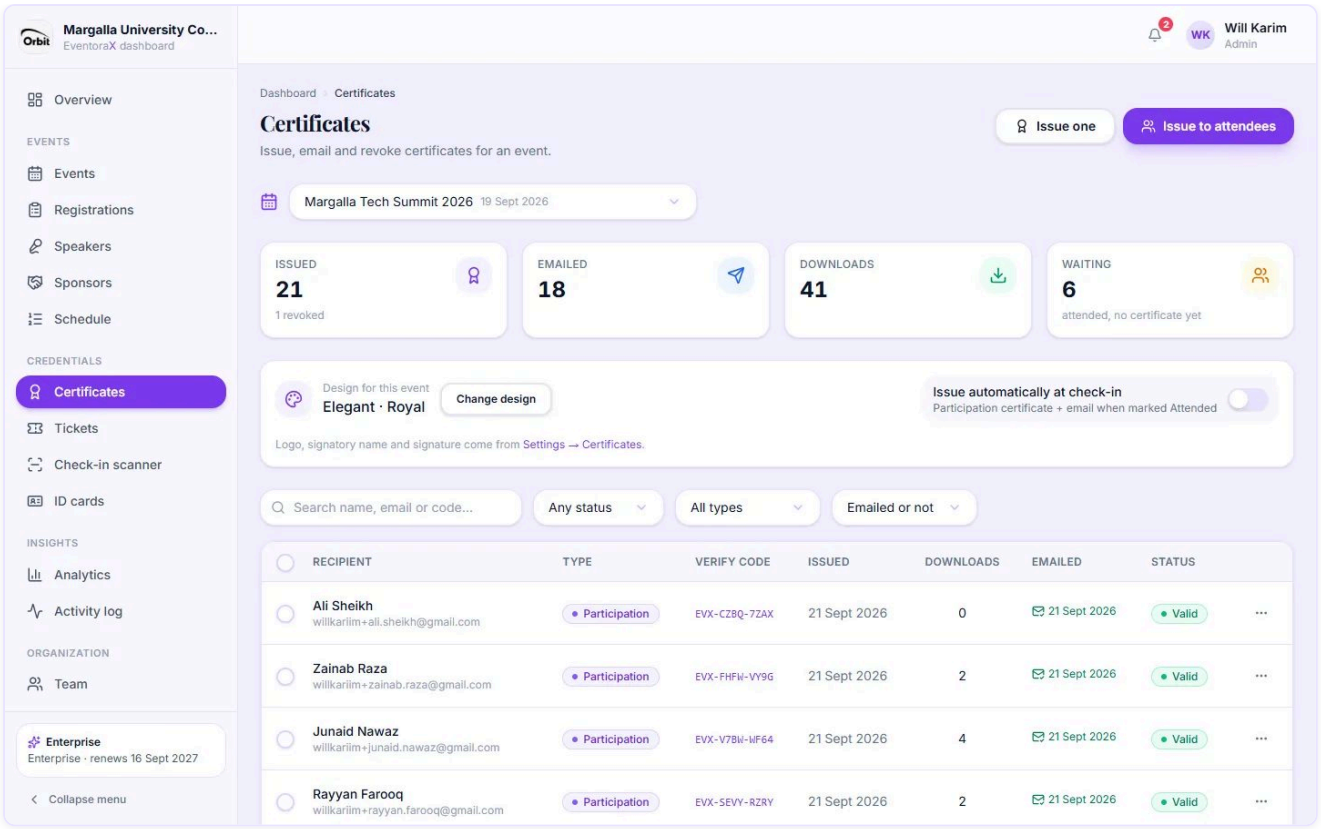

Type	Who can get it
Participation	Attendees marked **Attended**
Achievement	Attendees marked **Attended** (winners, top performers)
Appreciation, Speaker, Organizer	Anyone registered who isn't cancelled

A person gets at most **one certificate of each type** per event.

Before you start: signatory and logo

Set these once in **Settings** → **Certificates** (signatory name, title and signature image) and **Settings** → **Branding** (logo and colours). See Settings.

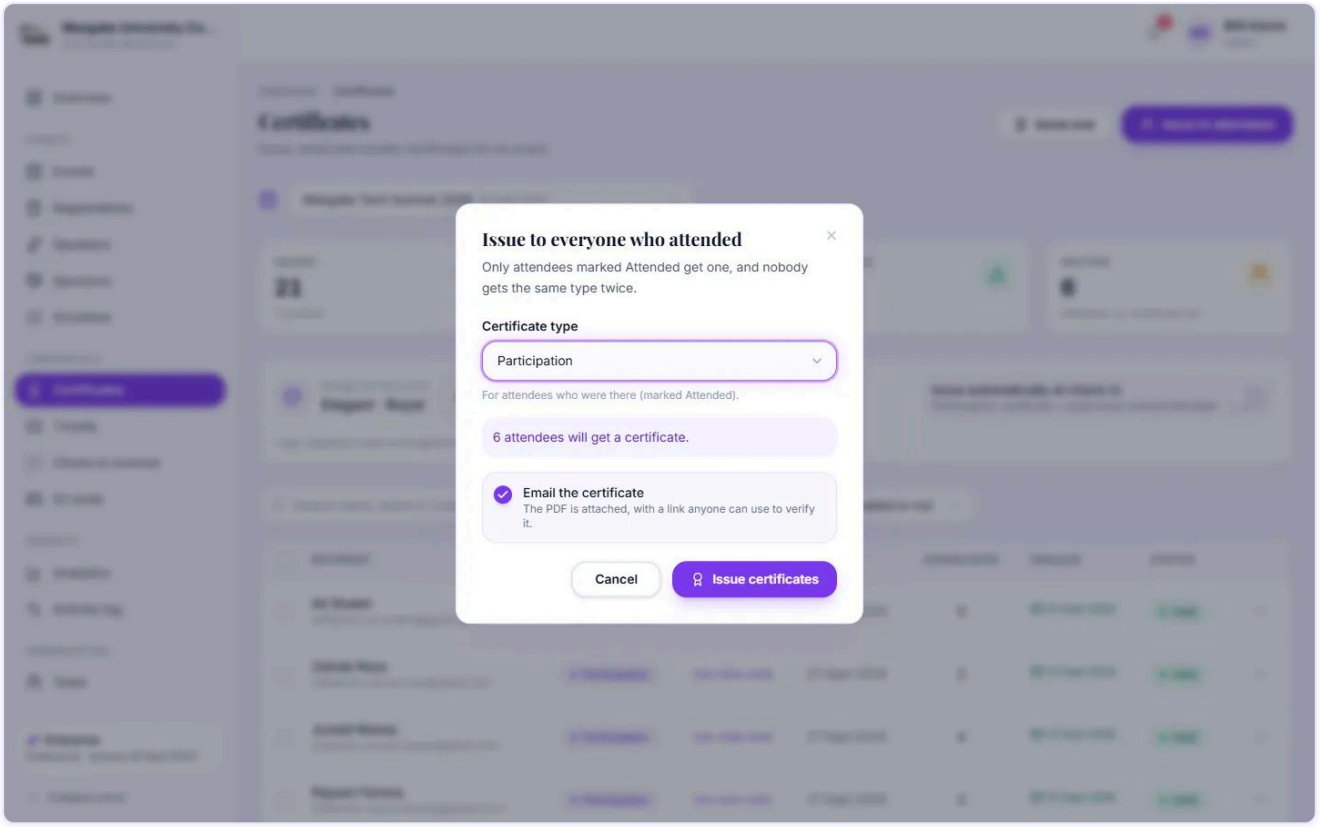

Certificates page

Certificates

- **Cards:** issued (and how many revoked), emailed, downloads by recipients, and **waiting** (attended but no certificate yet).
- **Design for this event** with **Change design**, and the switch **Issue automatically at check-in**.
- The list: recipient, type, verify code, issue date, downloads, emailed, status (**Valid** or **Revoked**). Filter by status, type and emailed; search by name, email or code.
- **⋯ menu: View PDF**, **Download**, **Copy verify link**, **Email to attendee** (or **Email again**), **Revoke** / **Restore**.
- Tick rows and click **Email selected** to (re)send certificates.

Issue certificates

Issue to attendees

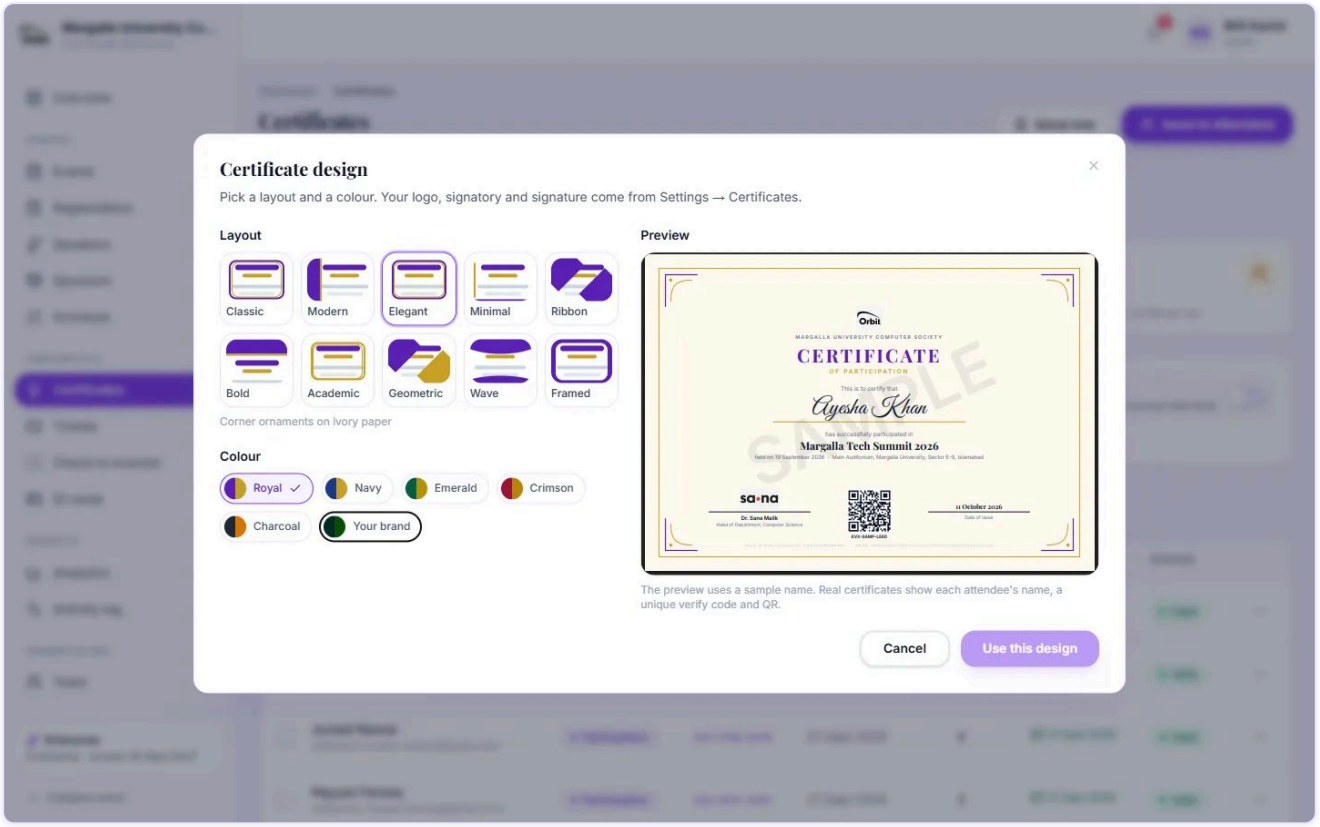

Issue to attendees gives a certificate to everyone eligible in one go:

1. Choose the **certificate type**. The box below says how many attendees will get one.
2. Leave **Email the certificate** ticked to send each person their PDF with the verify link.
3. Click **Issue certificates**. Emails go out in the background; admins can be notified when they're done (Notifications).

Issue one is for individual certificates (for example a Speaker certificate): search for attendees, tick them, pick the type and issue.

Automatic: with **Issue automatically at check-in** on, a Participation certificate is issued and emailed the moment someone is marked Attended or their ticket is scanned.

Choose a design

Certificate design picker

Pick one of **10 layouts** (Classic, Modern, Elegant, Minimal, Ribbon, Bold, Academic, Geometric, Wave, Framed) and a **colour** (Royal, Navy, Emerald, Crimson, Charcoal, or **Your brand** colours). The preview shows a sample certificate. Click **Use this design**. The design applies to certificates issued from now on.

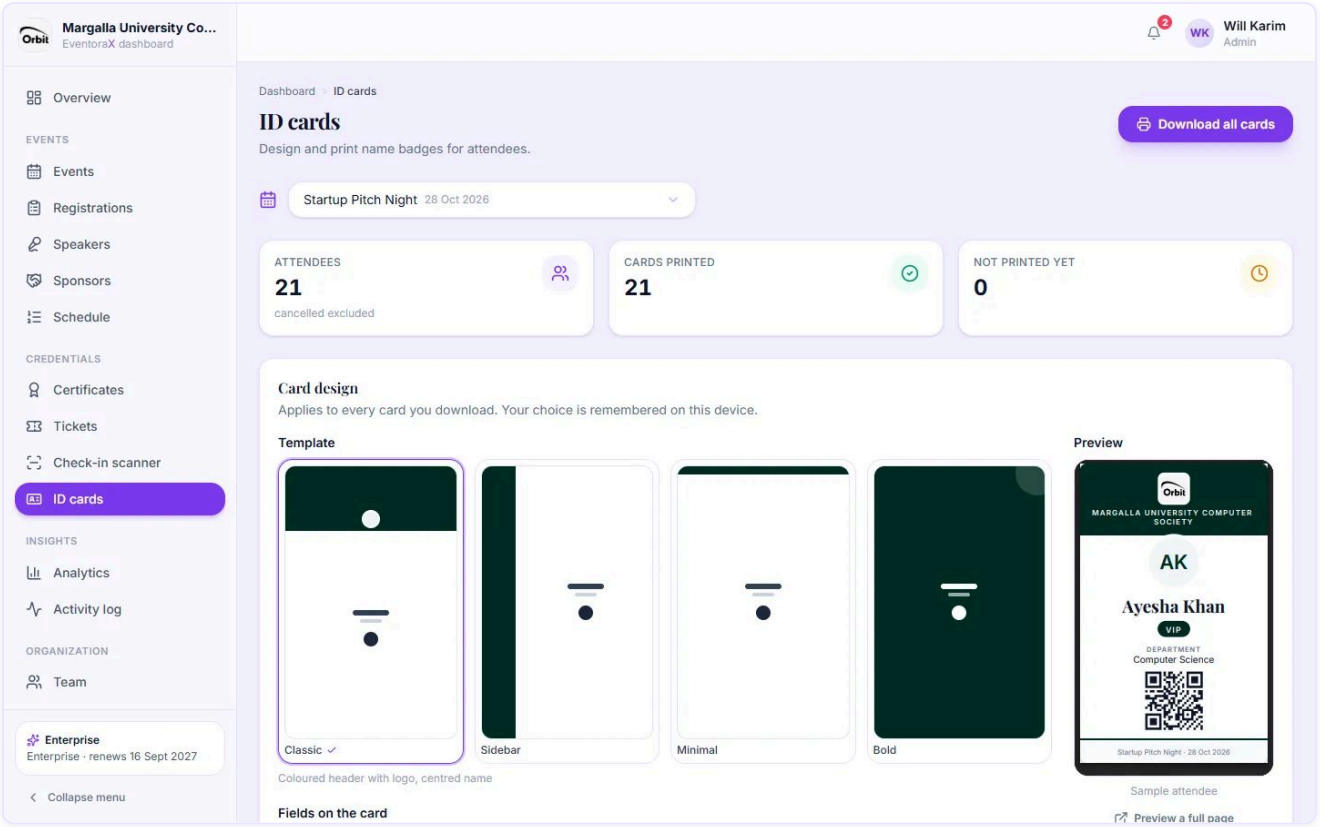

Revoke and restore

If a certificate was issued by mistake: ⋯ → **Revoke**, enter a reason, confirm. The certificate is kept, but the verify page now shows **REVOKED** with your reason. **Restore** makes it valid again.

7. ID cards

Everyone, including viewers, can print ID cards.

Name badges for attendees, ready to print and cut. The QR code on the card is the attendee's ticket, so a badge can be scanned at the door with the check-in scanner.

ID cards

1. Open **ID cards** and pick the event.
2. **Card design:**
   - **Template:** Classic (coloured header with logo), Sidebar (coloured band on the left), Minimal (white with a thin line) or Bold (full colour). Colours come from Settings → Branding.
   - **Fields on the card:** name and event are always printed; choose category, department, roll number, email and the QR code. Optionally your logo.
   - **Layout: 9 cards per A4 page** with cut marks (normal printer) or **one card per page** (card printers).
   - The **Preview** shows a sample card; **Preview a full page** opens a whole sheet. Your design choice is remembered on this computer.
3. Print:
   - **Download all cards** for everyone (or for everyone matching your filters).
   - Tick some people and **Download selected cards**.
   - ⋯ → **Download card** for one person; **View card** only looks at it.

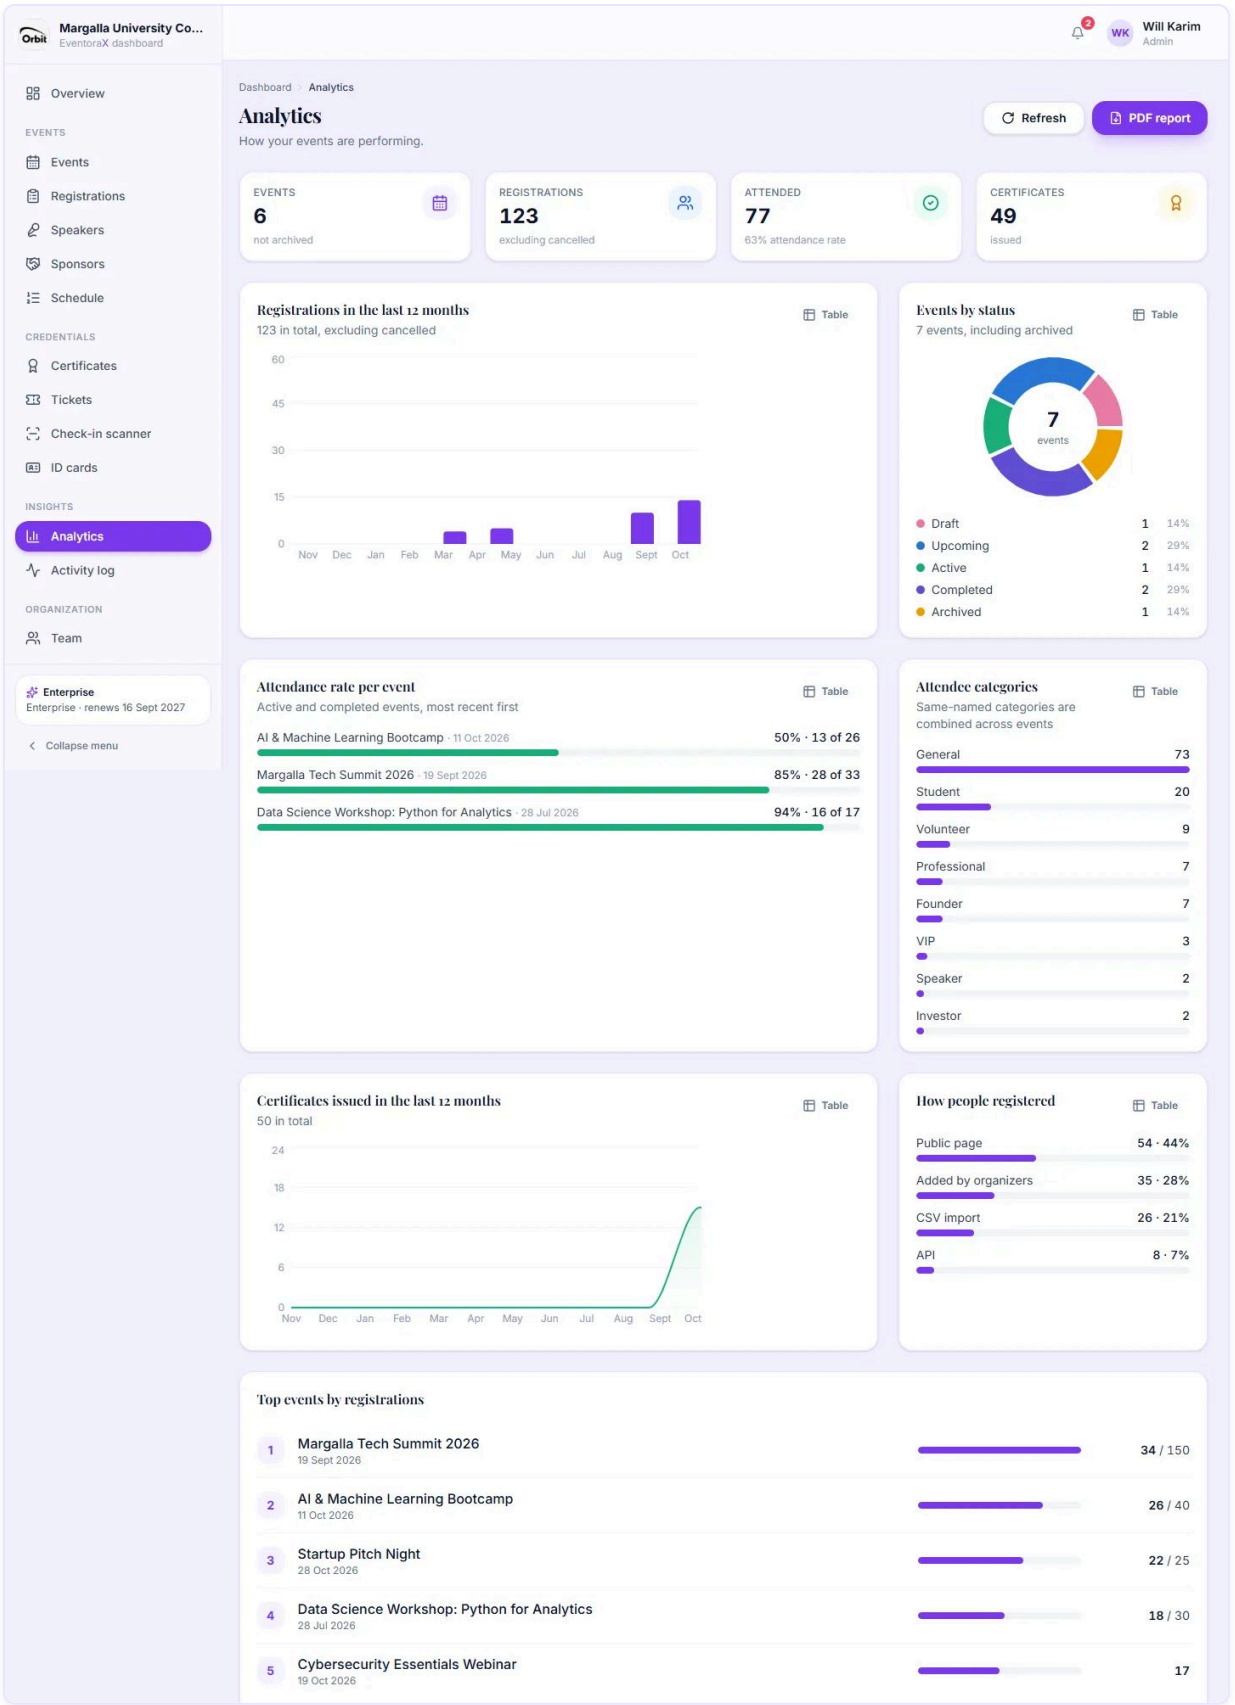

The cards at the top show attendees, cards printed and **not printed yet**. Use the filter "Not printed yet" to print only latecomers. Downloading counts as printed; viewing doesn't.

- Cards are the standard ID-card size (54 × 85.6 mm, portrait). Long names shrink to fit.
- There are no photos: cards show the person's initials in a circle.
- Cancelled registrations don't get cards.

8. Analytics and activity log

Analytics

Everyone in the organization.

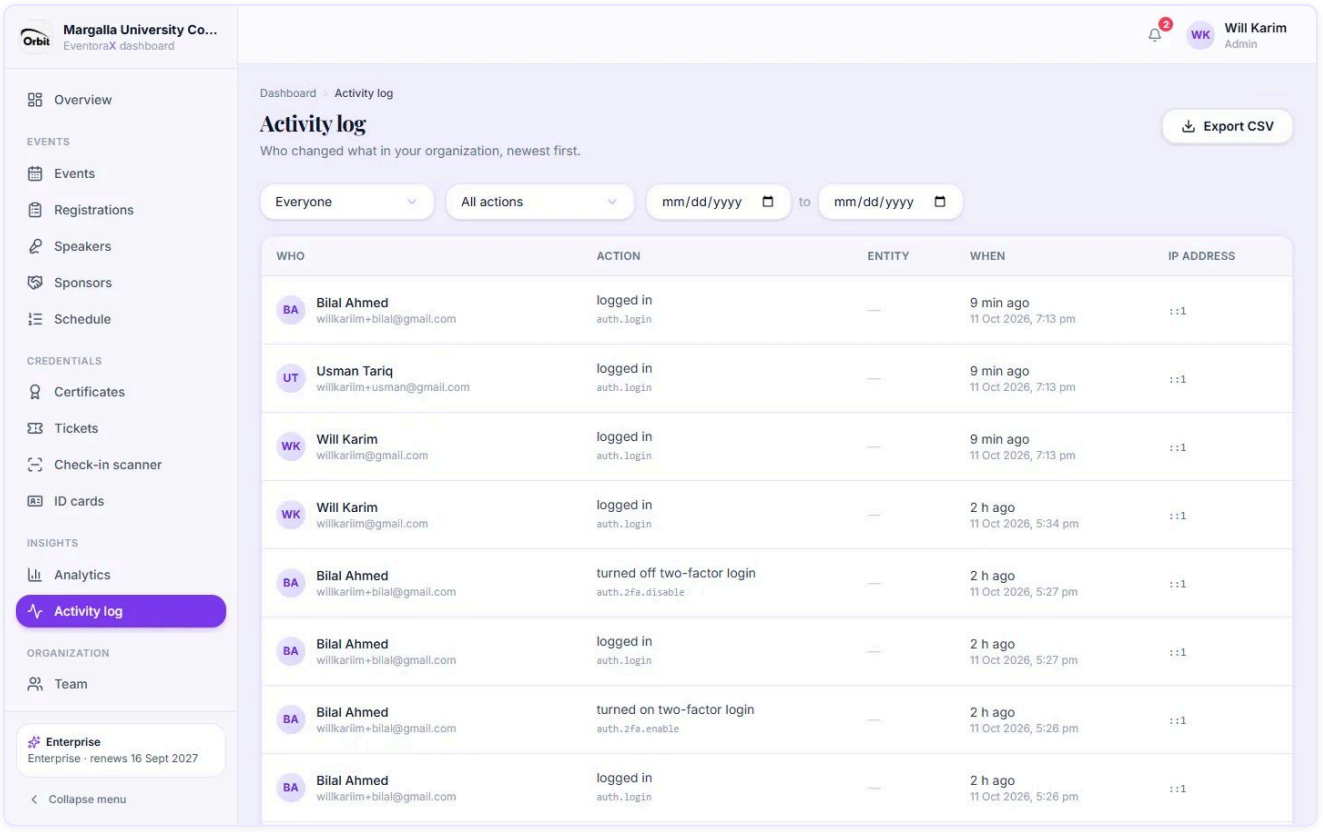

Analytics

How your events are doing, across all events: totals, registrations per month for the last 12 months, events and registrations by status, attendance rate per event, categories, how people registered (public page, organizer, CSV, API), certificates per month and your top events.

PDF report (top right) downloads the same numbers as a 2-page PDF with your logo, for sharing with a department head or sponsor.

Activity log

Admins only.

Activity log

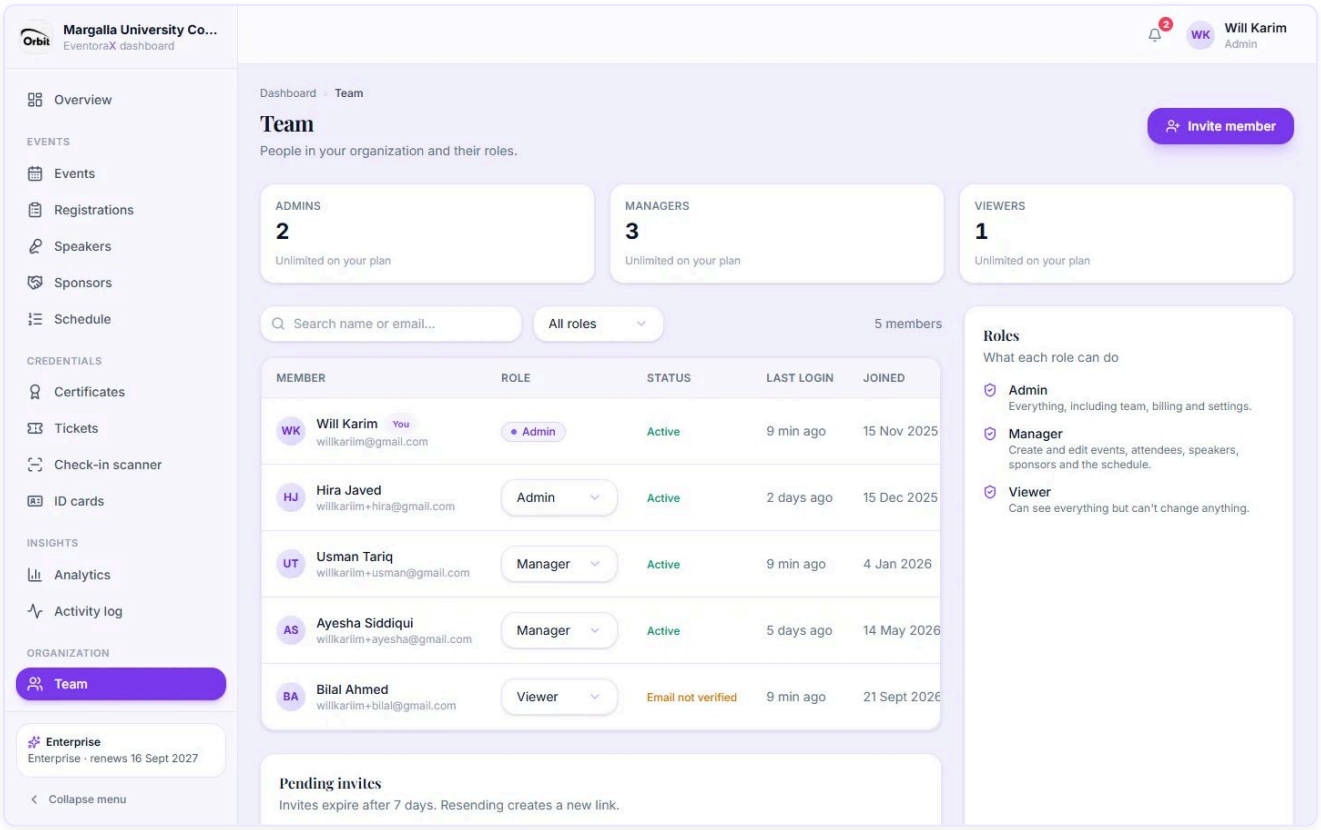

Everything your team did, newest first, in plain sentences: who created or edited events, imported attendees, issued or revoked certificates, changed settings, logged in, and so on. Filter by person, type of action and date range, and **Export CSV**.

Actions done by the EventoraX team while helping you ("log in as") are marked as such. Actions done through the API show the token's name.

9. Your organization

Team

Everyone can see the team. Only admins can invite, change roles or remove people.

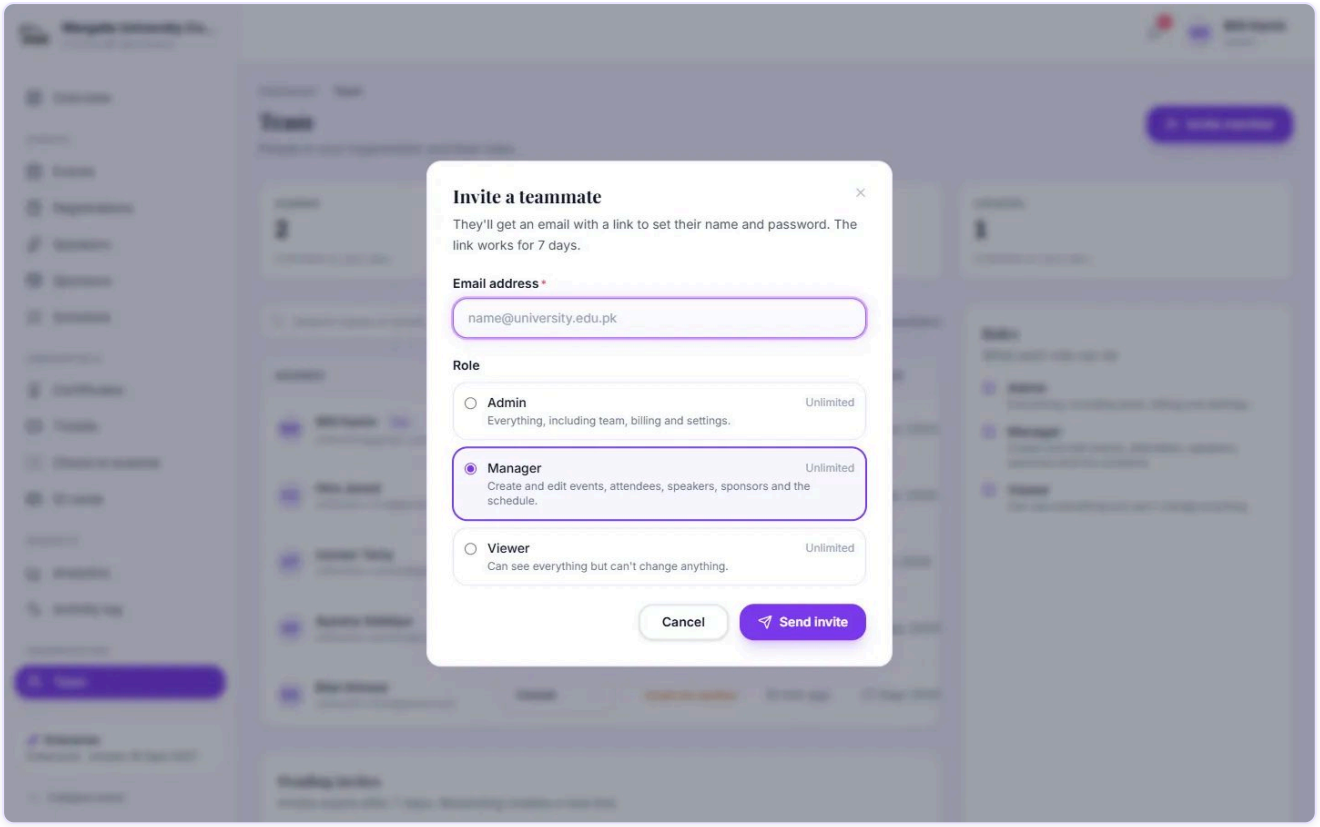

Team

The cards count admins, managers and viewers and show your plan's limit for each. The list shows each member's role, status (for example "Email not verified"), last login and join date. The **Roles** panel explains what each role can do (see the role table).

- **Change a role:** pick a new one from the member's role menu. A message with **Undo** appears for a few seconds. You can't change your own role, and the organization must always keep at least one admin.
- **Remove from team:** from the member's ⋯ menu, after confirming. Their account is deleted (what they did stays in the activity log); you can invite them again later.
- **Pending invites** (below the list): **Resend** (sends a fresh link) or cancel an invite.

Invite someone

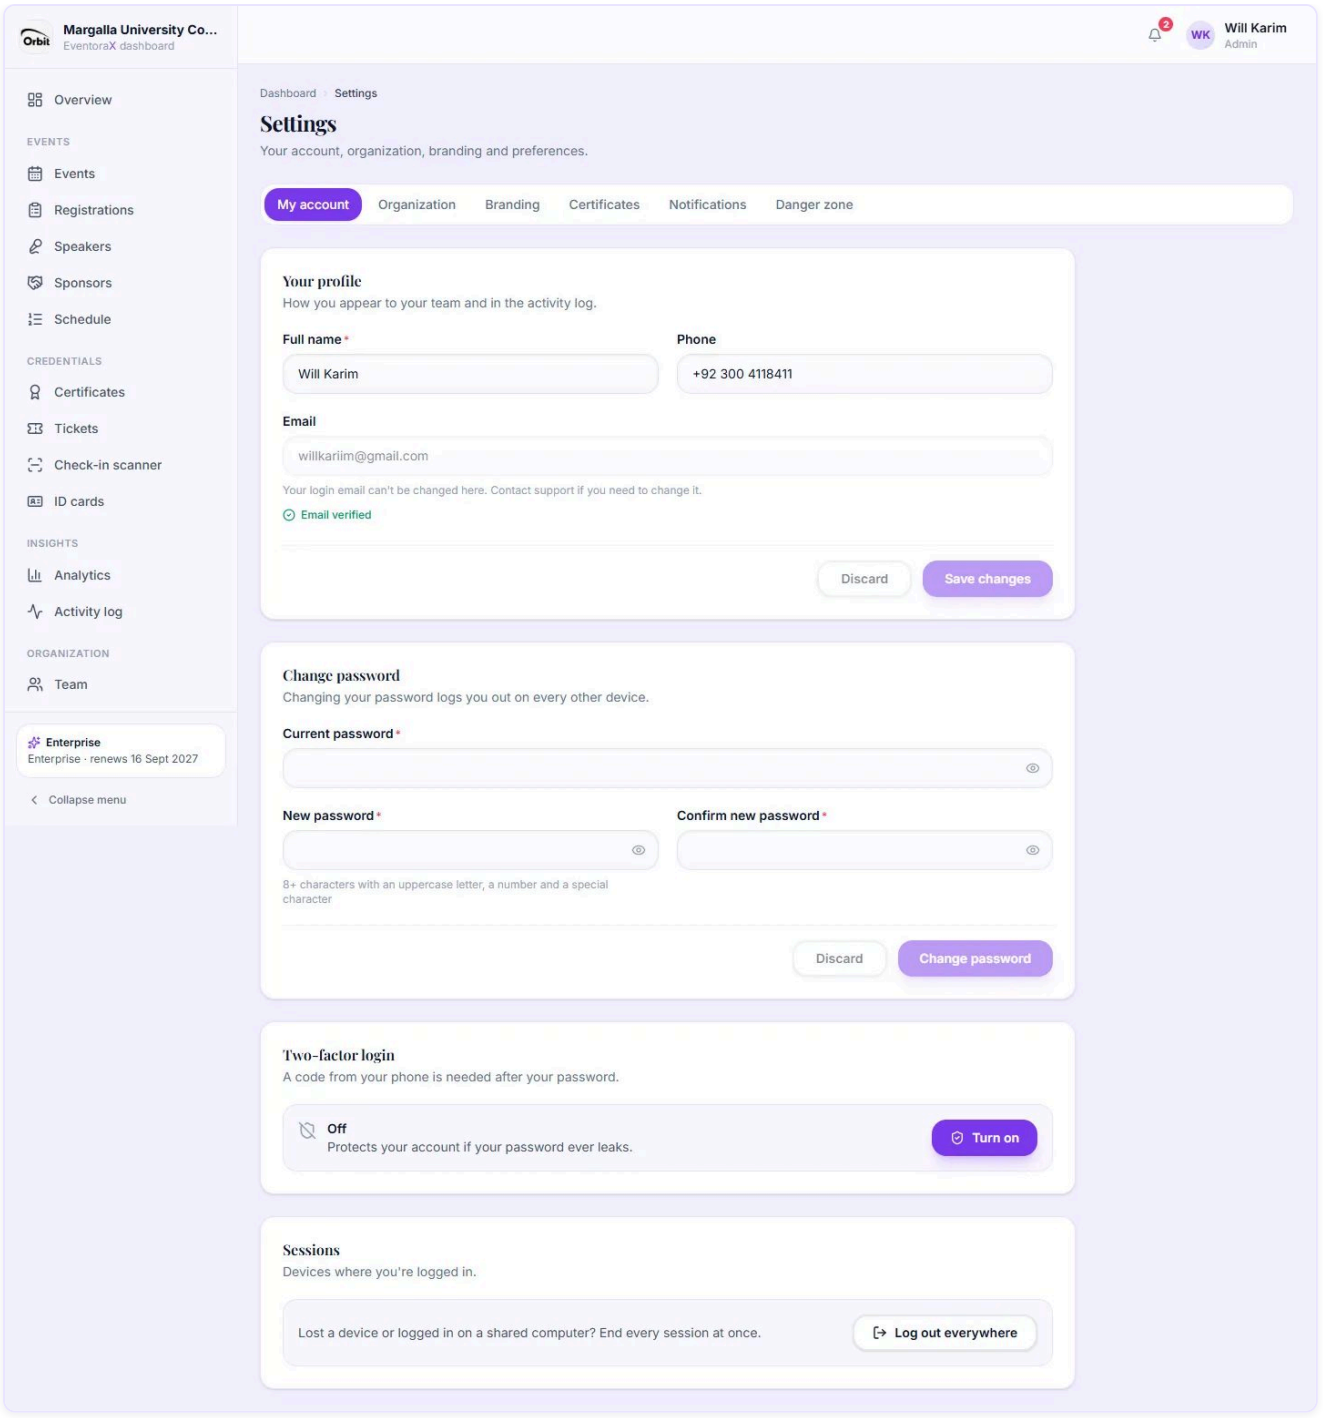

Invite a teammate

1. Click **Invite member**.
2. Enter their email address and choose **Admin**, **Manager** or **Viewer**. Each option shows how many more your plan allows (Pro: up to 3 admins and 7 managers; viewers are always unlimited).
3. Click **Send invite**. They get an email with a link to set their name and password, valid for 7 days.

Settings

The tabs are kept in the page address. A dot on a tab means it has unsaved changes. Non-admins only see **My account**.

My account

My account

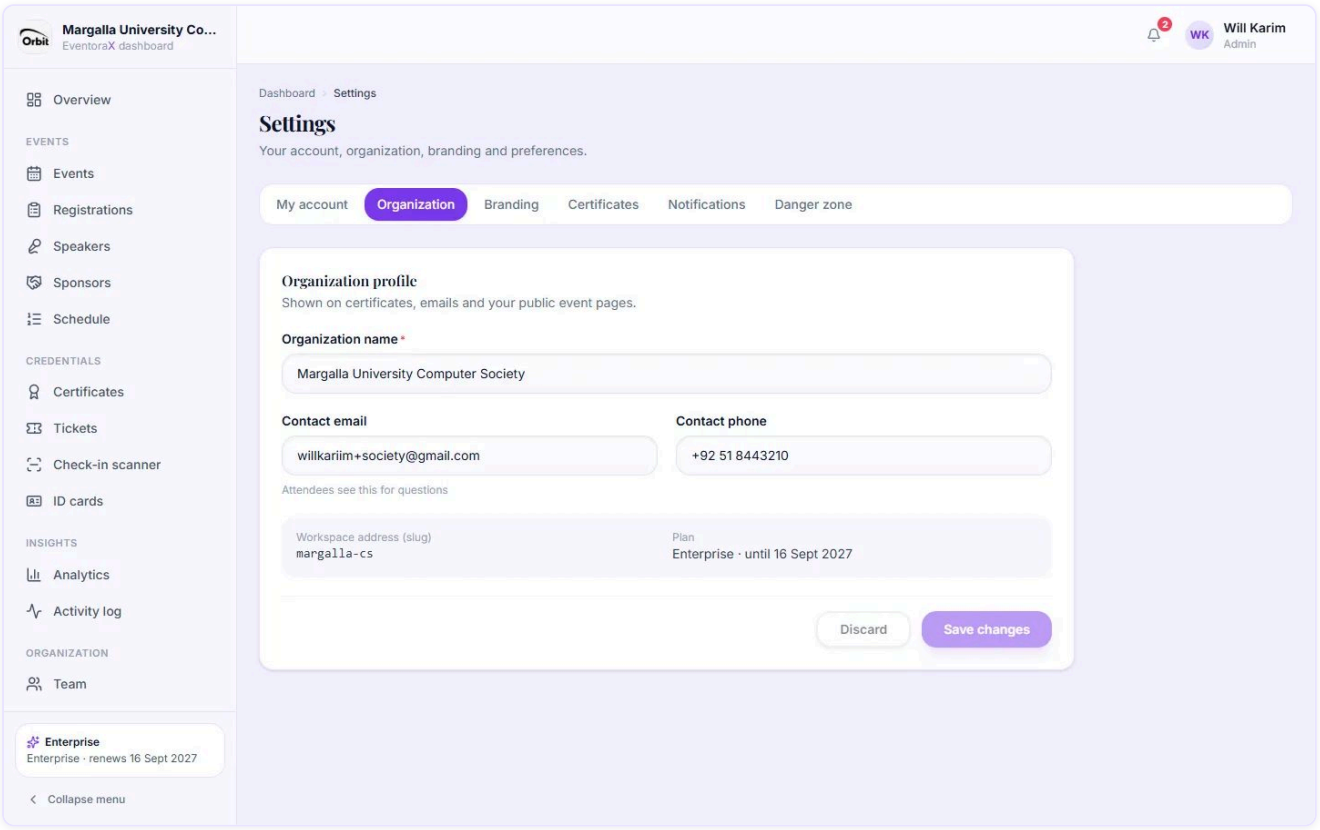

- **Your profile:** name and phone. Your login email can't be changed here (contact support).
- **Change password:** current password, then the new one twice. Every other device is logged out.
- **Two-factor login:** extra protection. Even with your password, nobody can log in without your phone.
    1. Click **Turn on**.
    2. Scan the QR code with an authenticator app (Google Authenticator, Microsoft Authenticator, Authy…).
    3. Type the 6-digit code the app shows.

4. **Save the 10 recovery codes** (Copy or Download). Each works once if you lose your phone. They are shown only once.

From now on, login asks for the code after your password. Turning it off or making new recovery codes asks for your password. Lost both the phone and the codes? Ask the EventoraX team to reset it.

- **Sessions: Log out everywhere** ends every session, for example after using a shared computer.

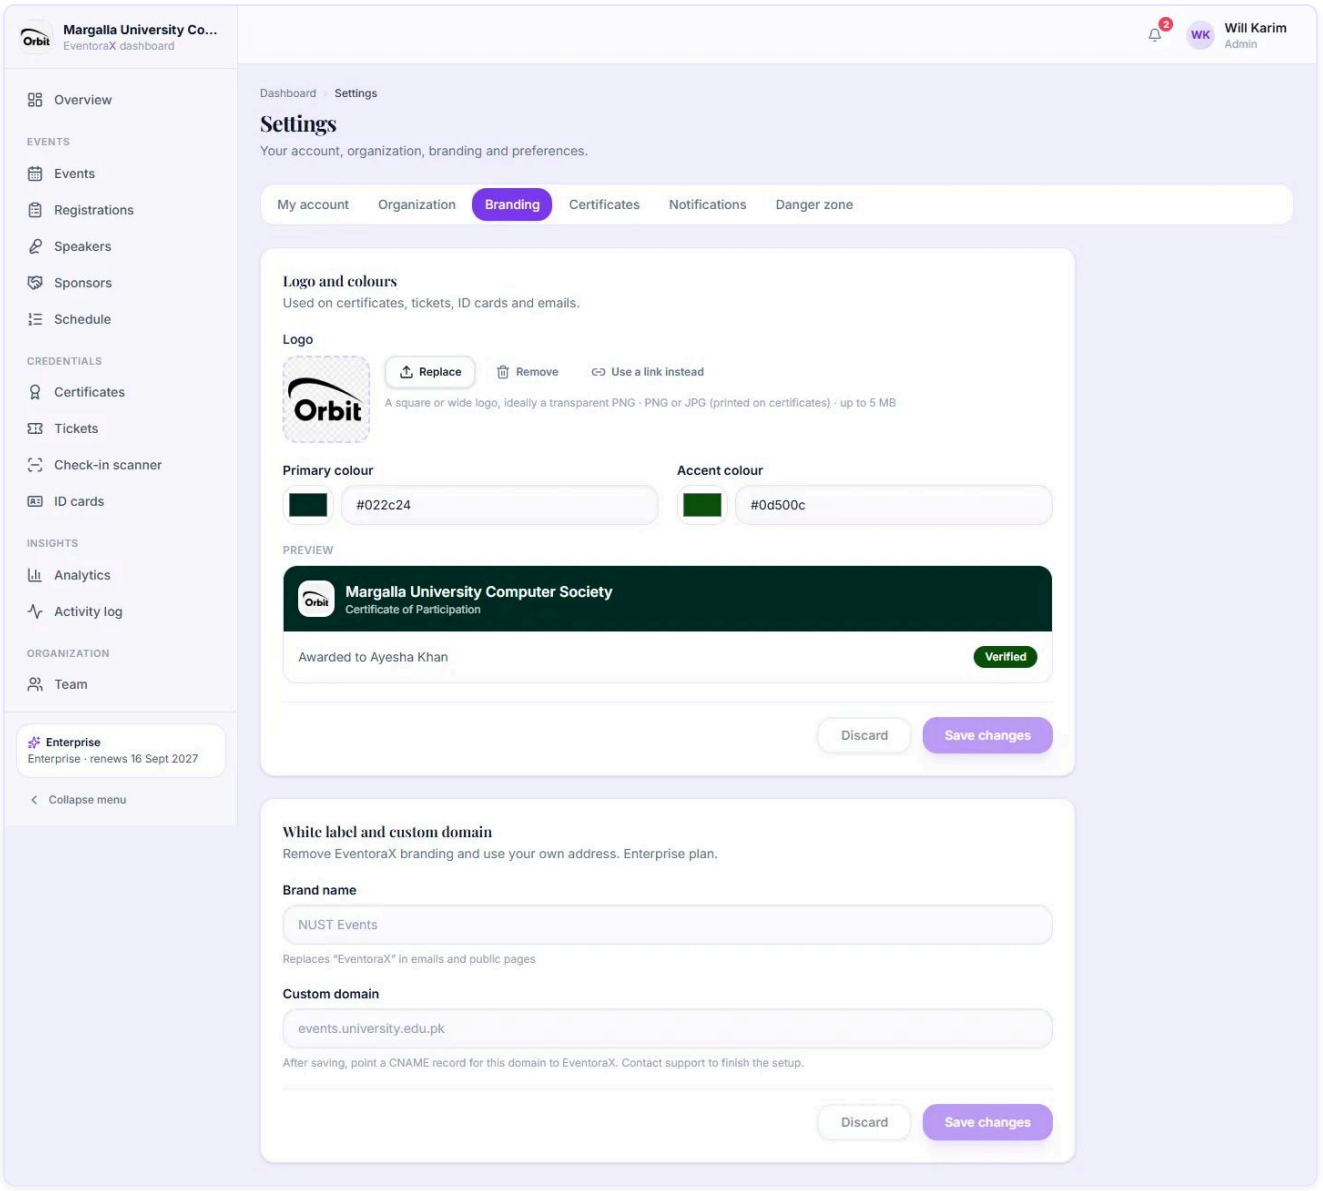

Organization

Organization settings

Organization name, and the contact email and phone attendees see for questions. Also shows your organization's address (slug, used in `/o/<slug>`) and your plan.

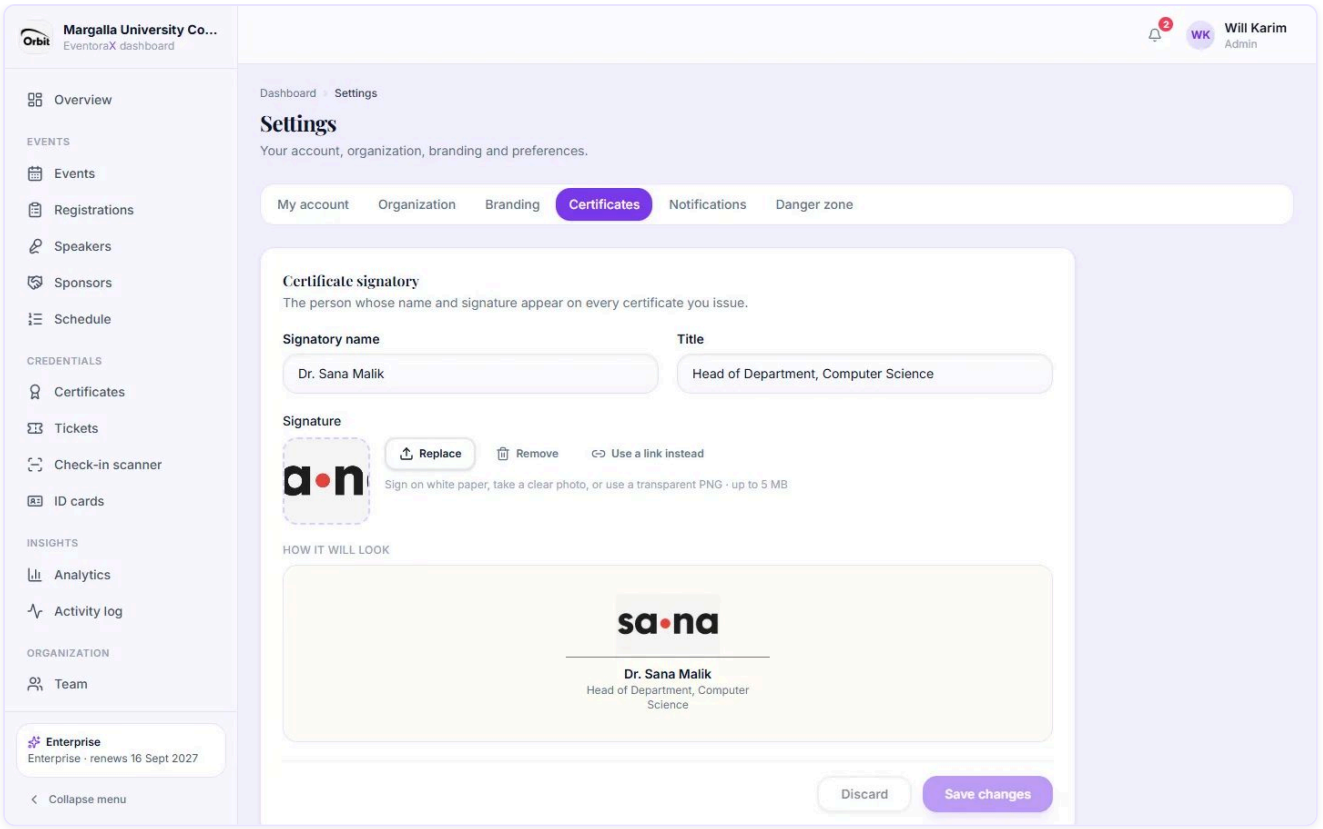

Branding

Branding

- **Logo** (PNG or JPG, because it's printed on PDFs) and **primary** and **accent colours**. Used on certificates, tickets, ID cards, emails and your public pages. A preview shows how it looks.
- **White label and custom domain** (Enterprise plan): a brand name that replaces "EventoraX" in emails and public pages, and your own web address (contact support to finish the setup).

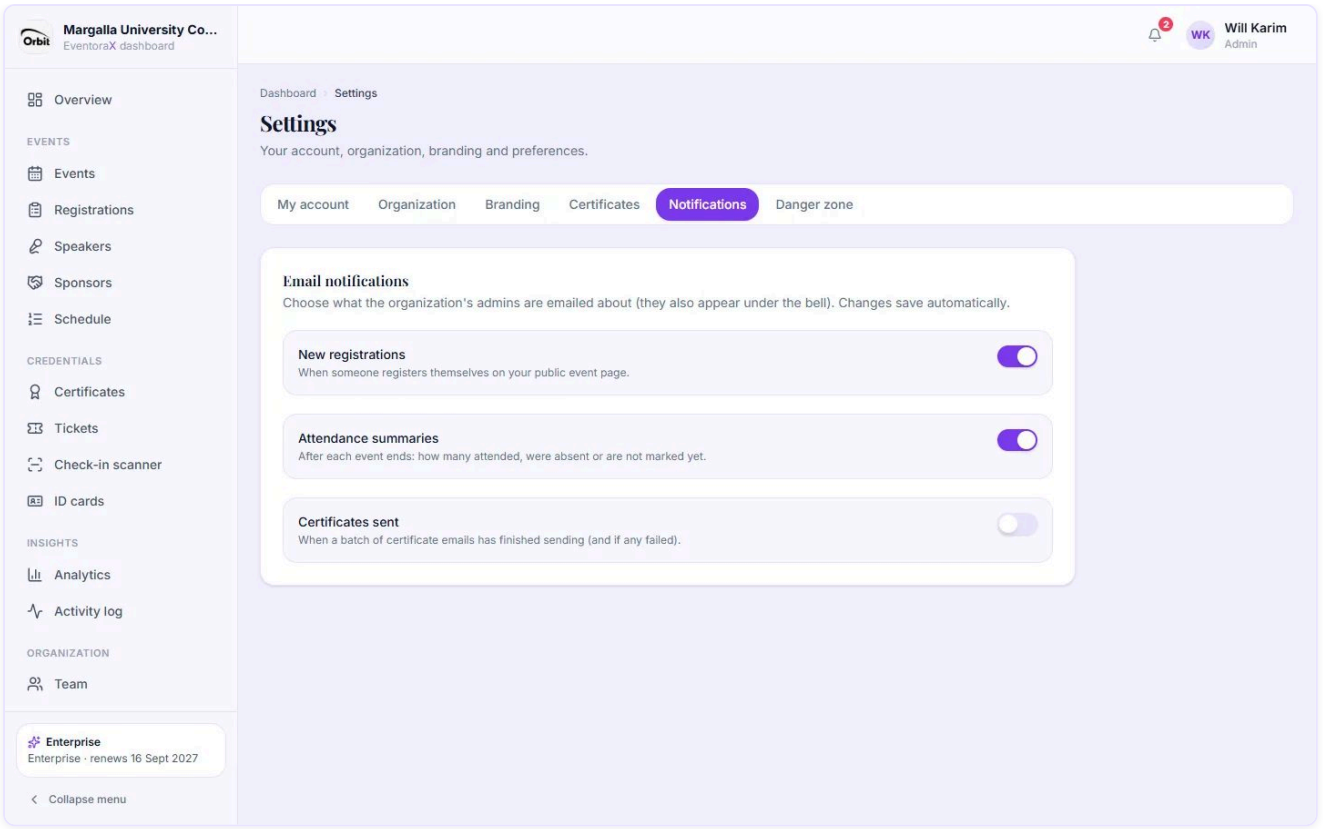

Certificates

Certificate signatory

The **signatory** printed on every certificate: name, title and a signature image (sign on white paper and take a clear photo, or upload a transparent PNG). The preview shows how it will look.

Notifications

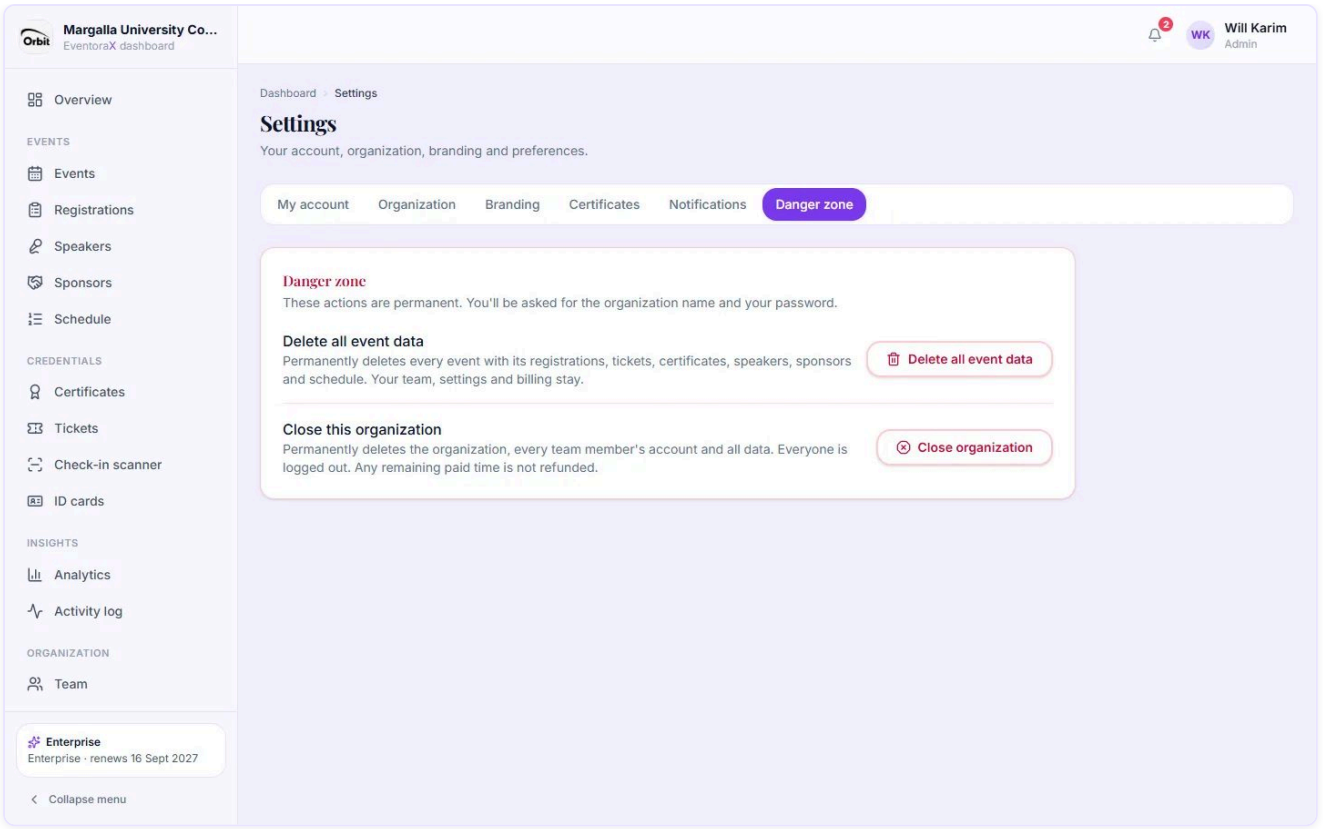

Notifications

Choose what admins are emailed about (they also appear under the bell). Changes save automatically.

- **New registrations:** someone registered on your public event page.
- **Attendance summaries:** after each event ends: how many attended, were absent or not marked yet.
- **Certificates sent:** a batch of certificate emails has finished (and whether any failed).

Danger zone

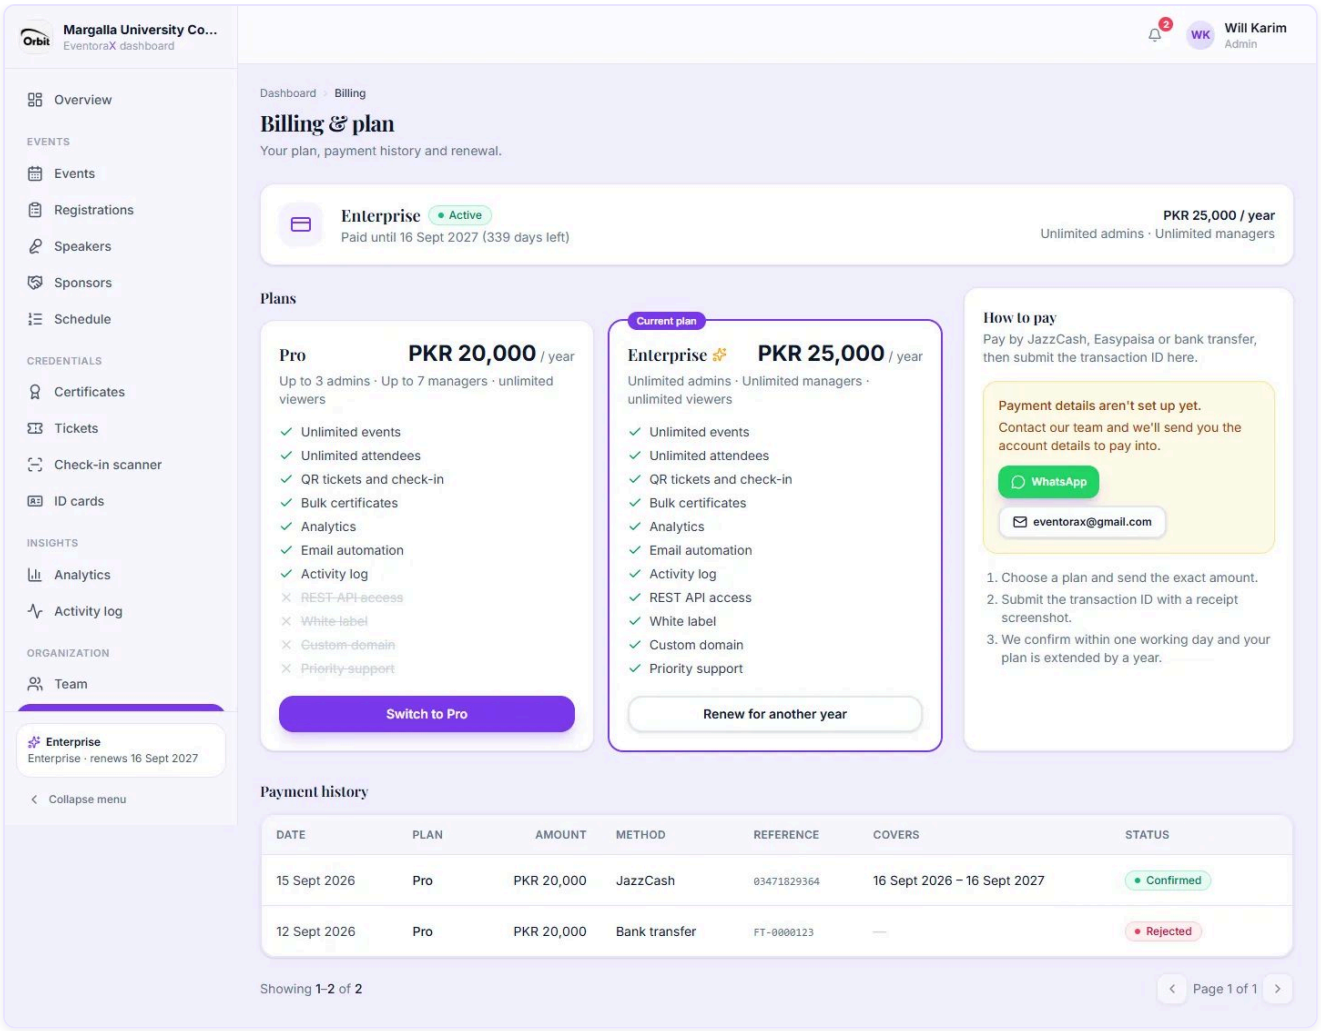

Danger zone

Both actions are permanent and ask for the organization's name and your password.

- **Delete all event data:** removes every event with its registrations, tickets, certificates, speakers, sponsors and schedule. Your team, settings and billing stay.
- **Close organization:** deletes the organization, every member's account and all data. Remaining paid time is not refunded.

Billing

Admins only.

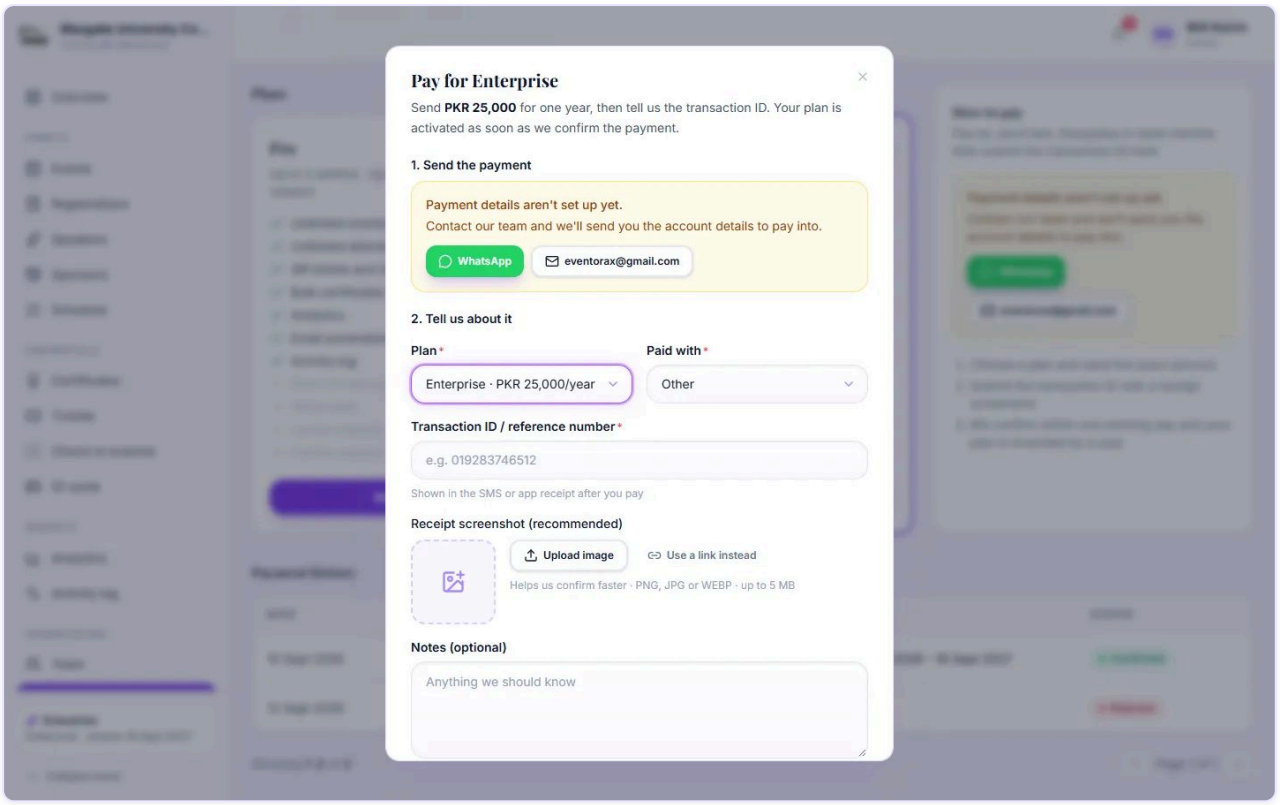

Billing

Your current plan, its status and end date, the available plans with prices and features, how to pay, and your payment history.

How to pay (renew or upgrade):

1. Send the plan's yearly price by **JazzCash**, **Easypaisa** or **bank transfer** to the accounts shown under **How to pay**. (If none are shown, contact the team using the WhatsApp or email buttons.)
2. Click **Renew for another year** (or **Pay for …** / **Switch to …**).

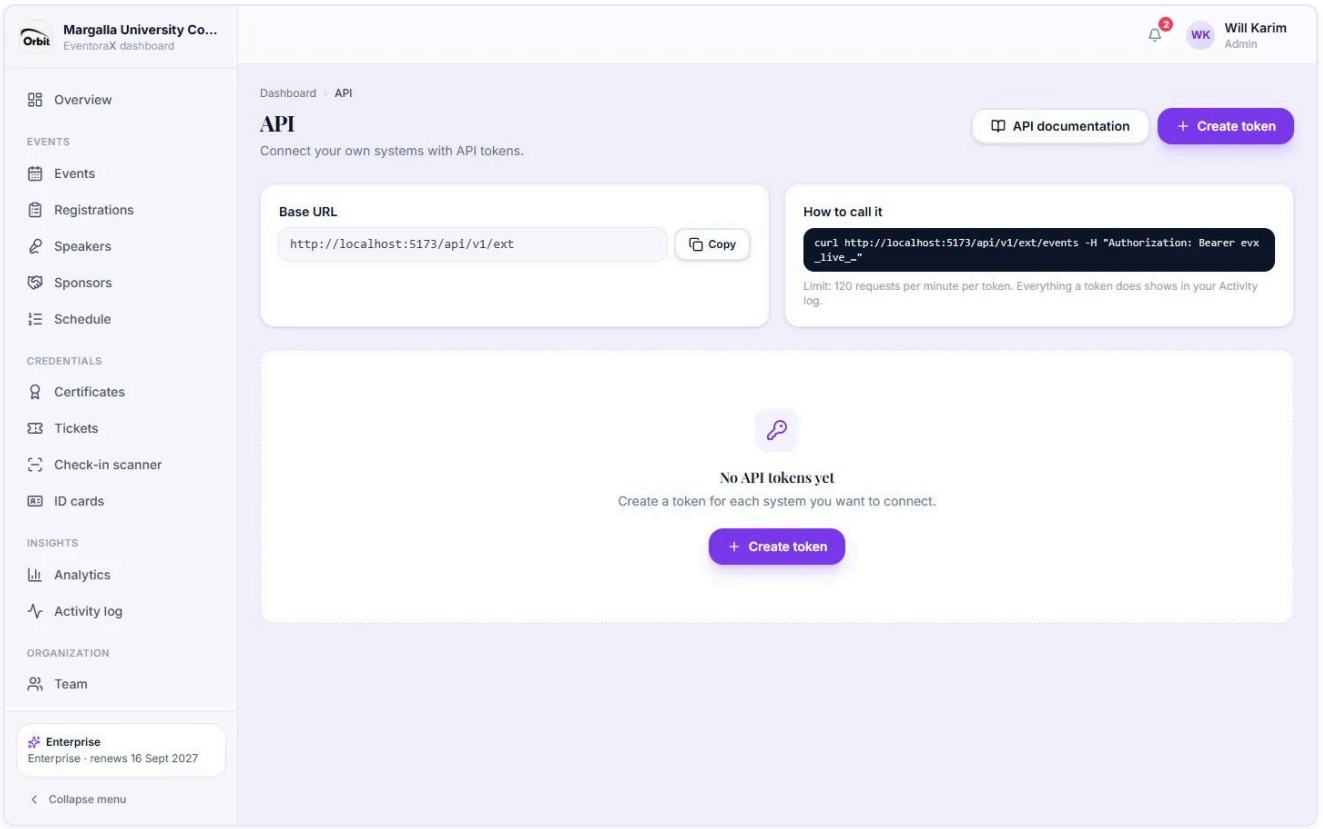

Pay dialog

3. Choose the plan and how you paid, enter the **transaction ID** from your SMS or app receipt, upload a **screenshot of the receipt** (recommended) and add a note if needed. Submit.
4. The payment shows as **Pending**. The EventoraX team checks it, usually within one working day. When it's confirmed you get an email and your plan runs for another year: from your current end date if a paid plan is still running (renewing early never loses days), otherwise from the day it's confirmed. If it's rejected, the reason is shown under the payment.

You can cancel a pending payment you submitted by mistake. Billing keeps working even after your plan has expired.

API (Enterprise plan)

Admins only.

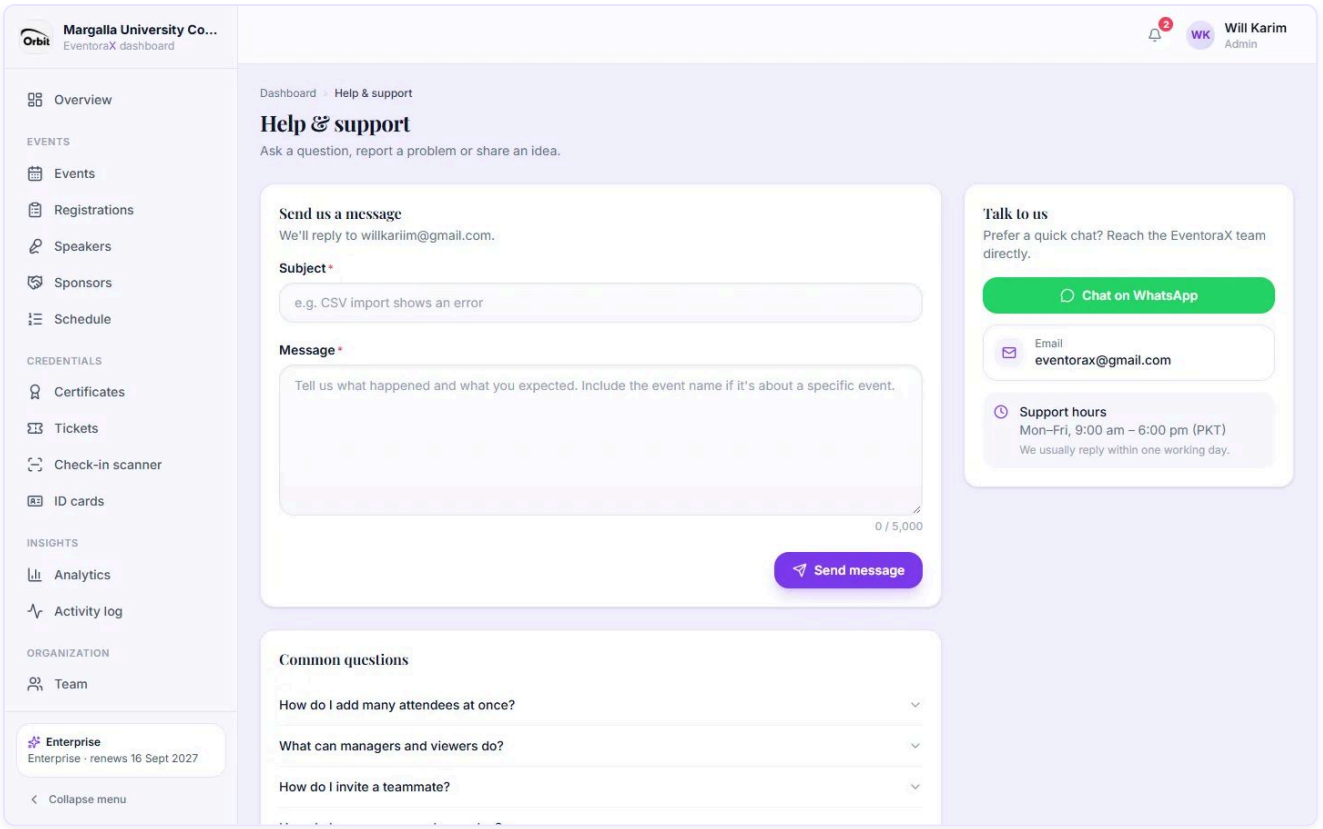

API

Lets your own systems (a university portal, a form tool) read events and registrations, register people, check them in and look up certificates. On other plans this page explains that the API is part of Enterprise.

1. Click **Create token**, give it a name (for example "Student portal") and an expiry (30, 90 or 365 days, or never).
2. **Copy the token now.** It starts with `evx_live_` and is shown only once.
3. Give it to the developer together with the **API documentation** link.
4. **Revoke** a token to stop it immediately.

Everything a token does appears in the Activity log with the token's name.

Help & support

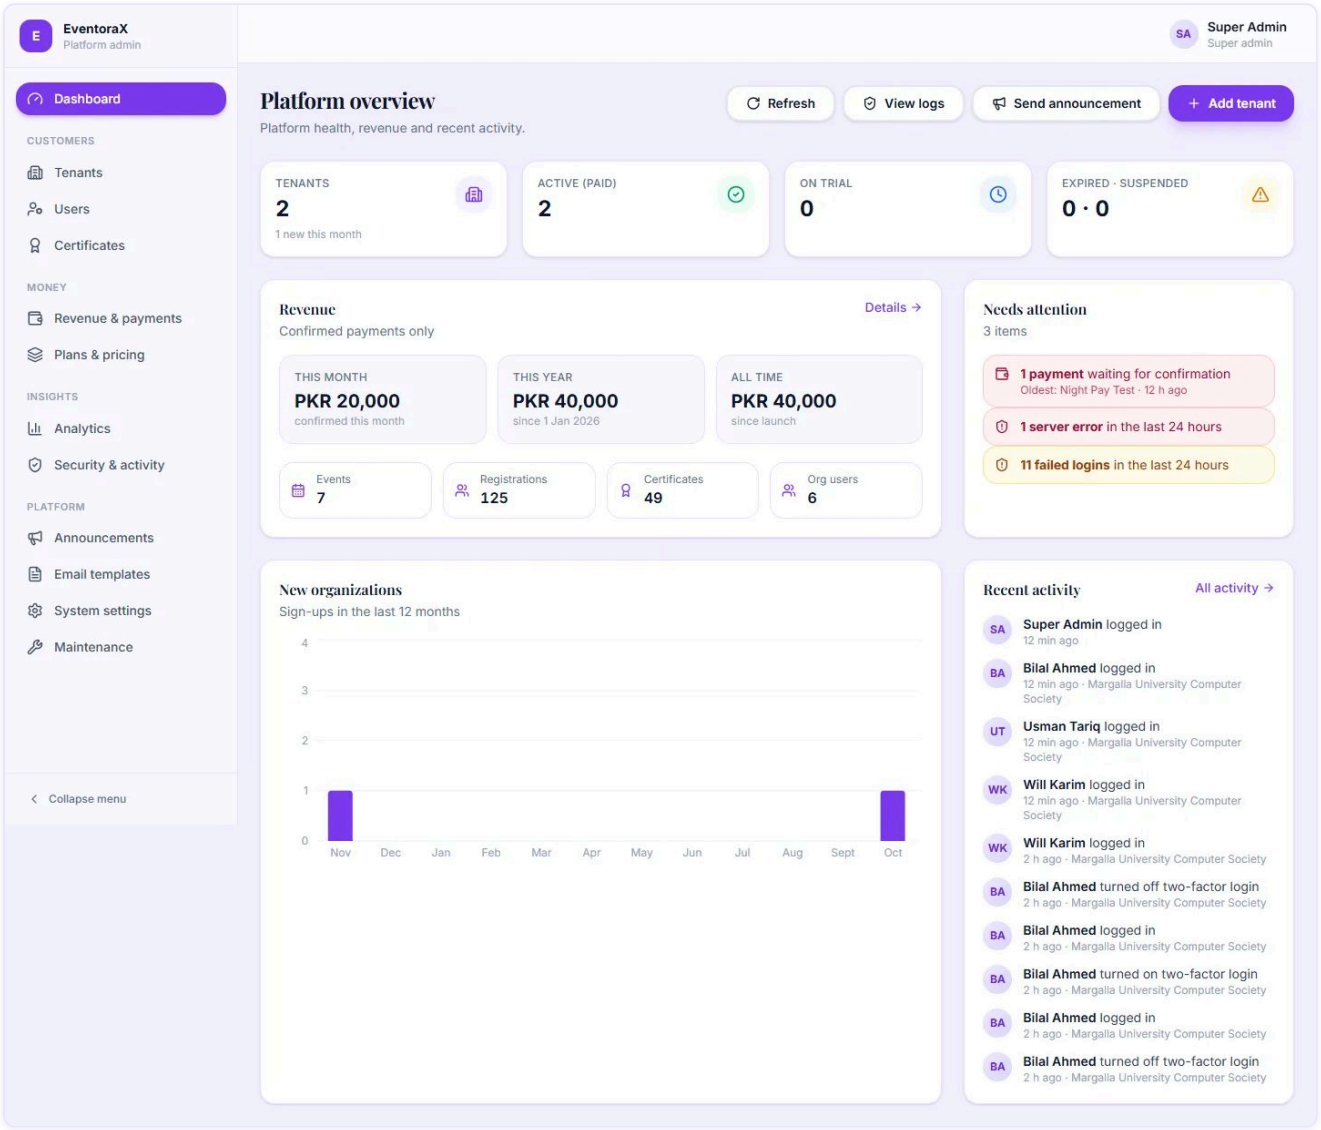

Help and support

Send the EventoraX team a message (we reply to your login email), chat on WhatsApp, or read the common questions.

10. Superadmin panel

For the EventoraX team only. The superadmin runs the platform: organizations (called **tenants**), their payments, plans, users and platform-wide settings. After logging in, the superadmin lands on `/superadmin` with its own menu: Customers, Money, Insights and Platform.

Dashboard

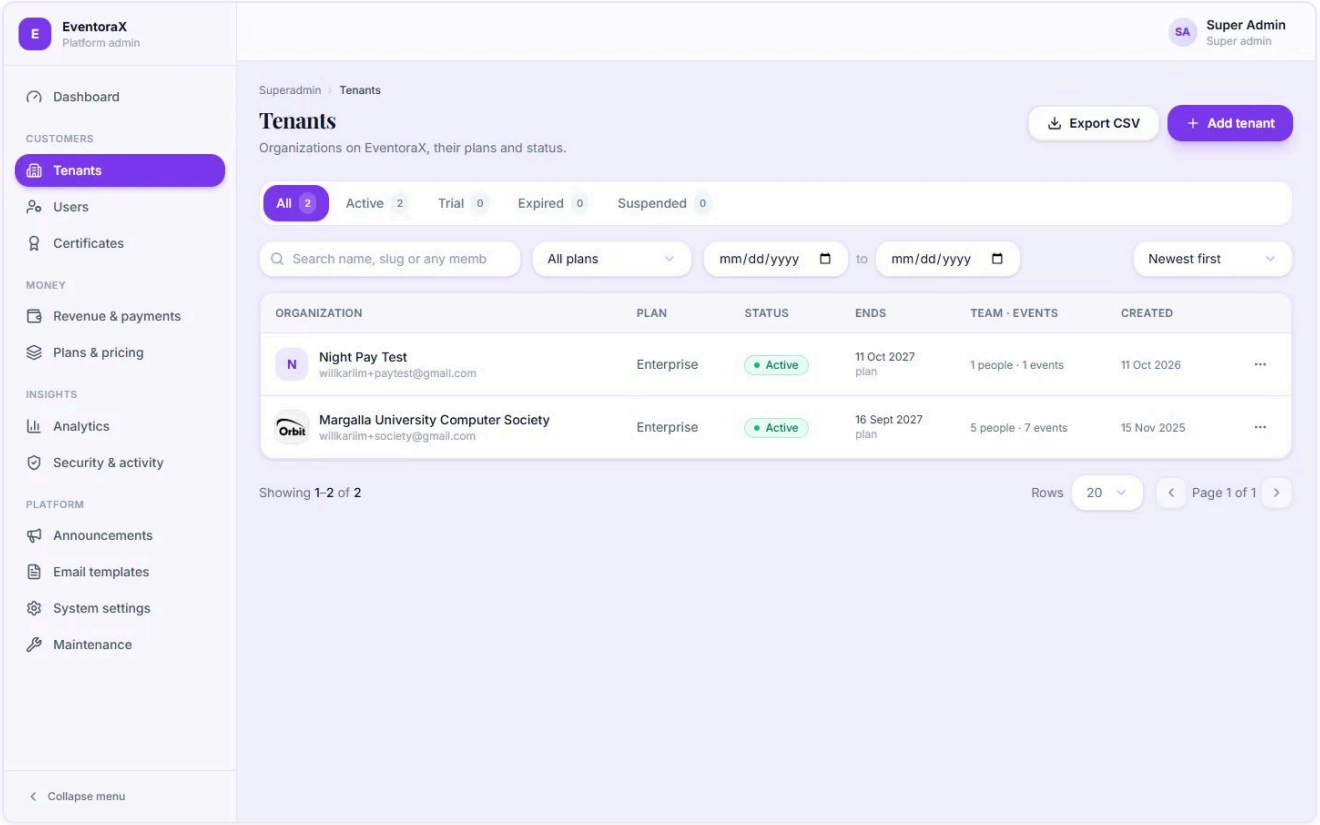

Platform overview

- Tenants by status: total (and new this month), active (paid), on trial, expired and suspended.
- **Revenue** from confirmed payments: this month, this year, all time; platform totals (events, registrations, certificates, organization users).
- **Needs attention:** payments waiting for confirmation, server errors, many failed logins, plans ending this week, recently expired organizations. Click an item to go to it.
- New organizations per month and recent platform activity.
- Quick actions: **Refresh**, **View logs**, **Send announcement**, **Add tenant**.

Customers

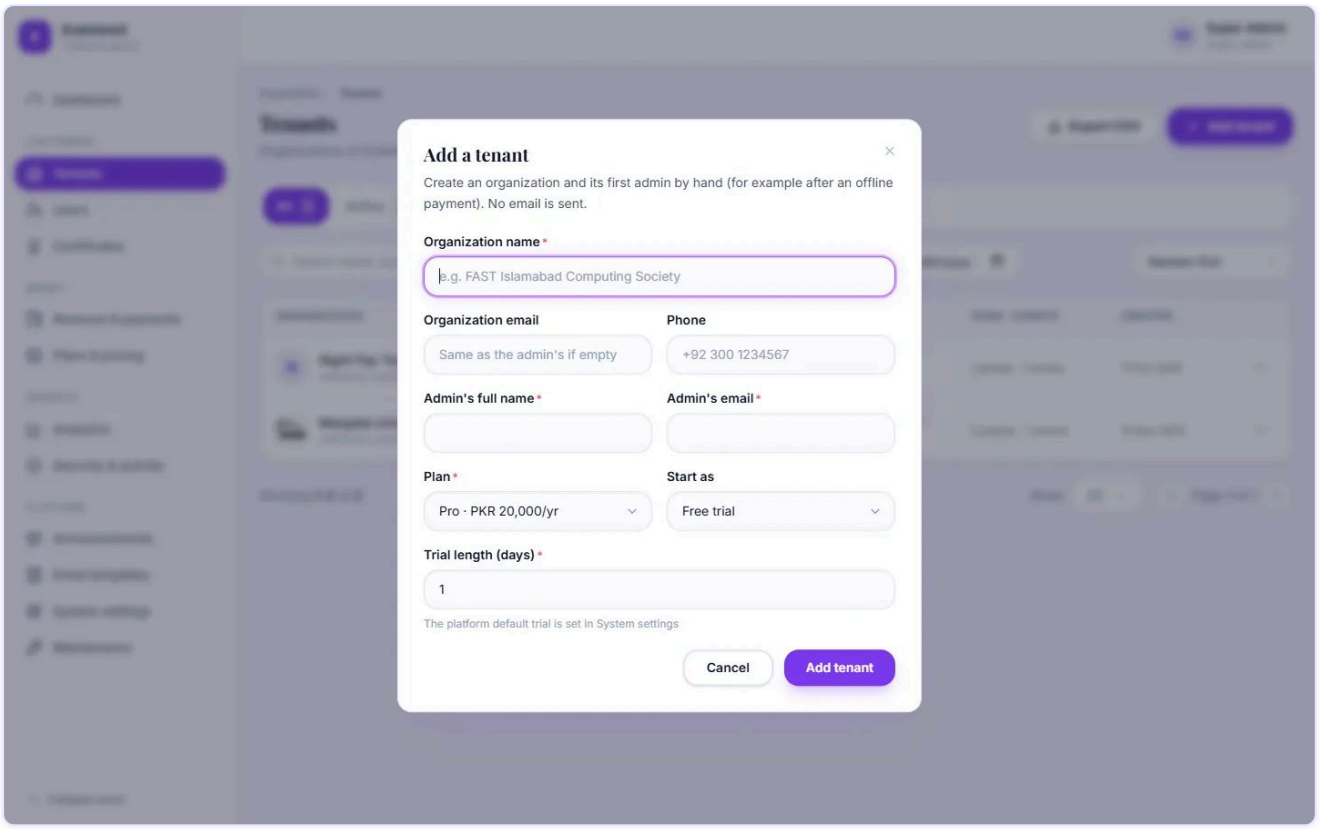

Tenants

Tenants

Every organization with its plan, status, end date, team and event counts. Tabs by status (All, Active, Trial, Expired, Suspended); search by name, slug or any member's email; filter by plan and sign-up date; sort; **Export CSV**.

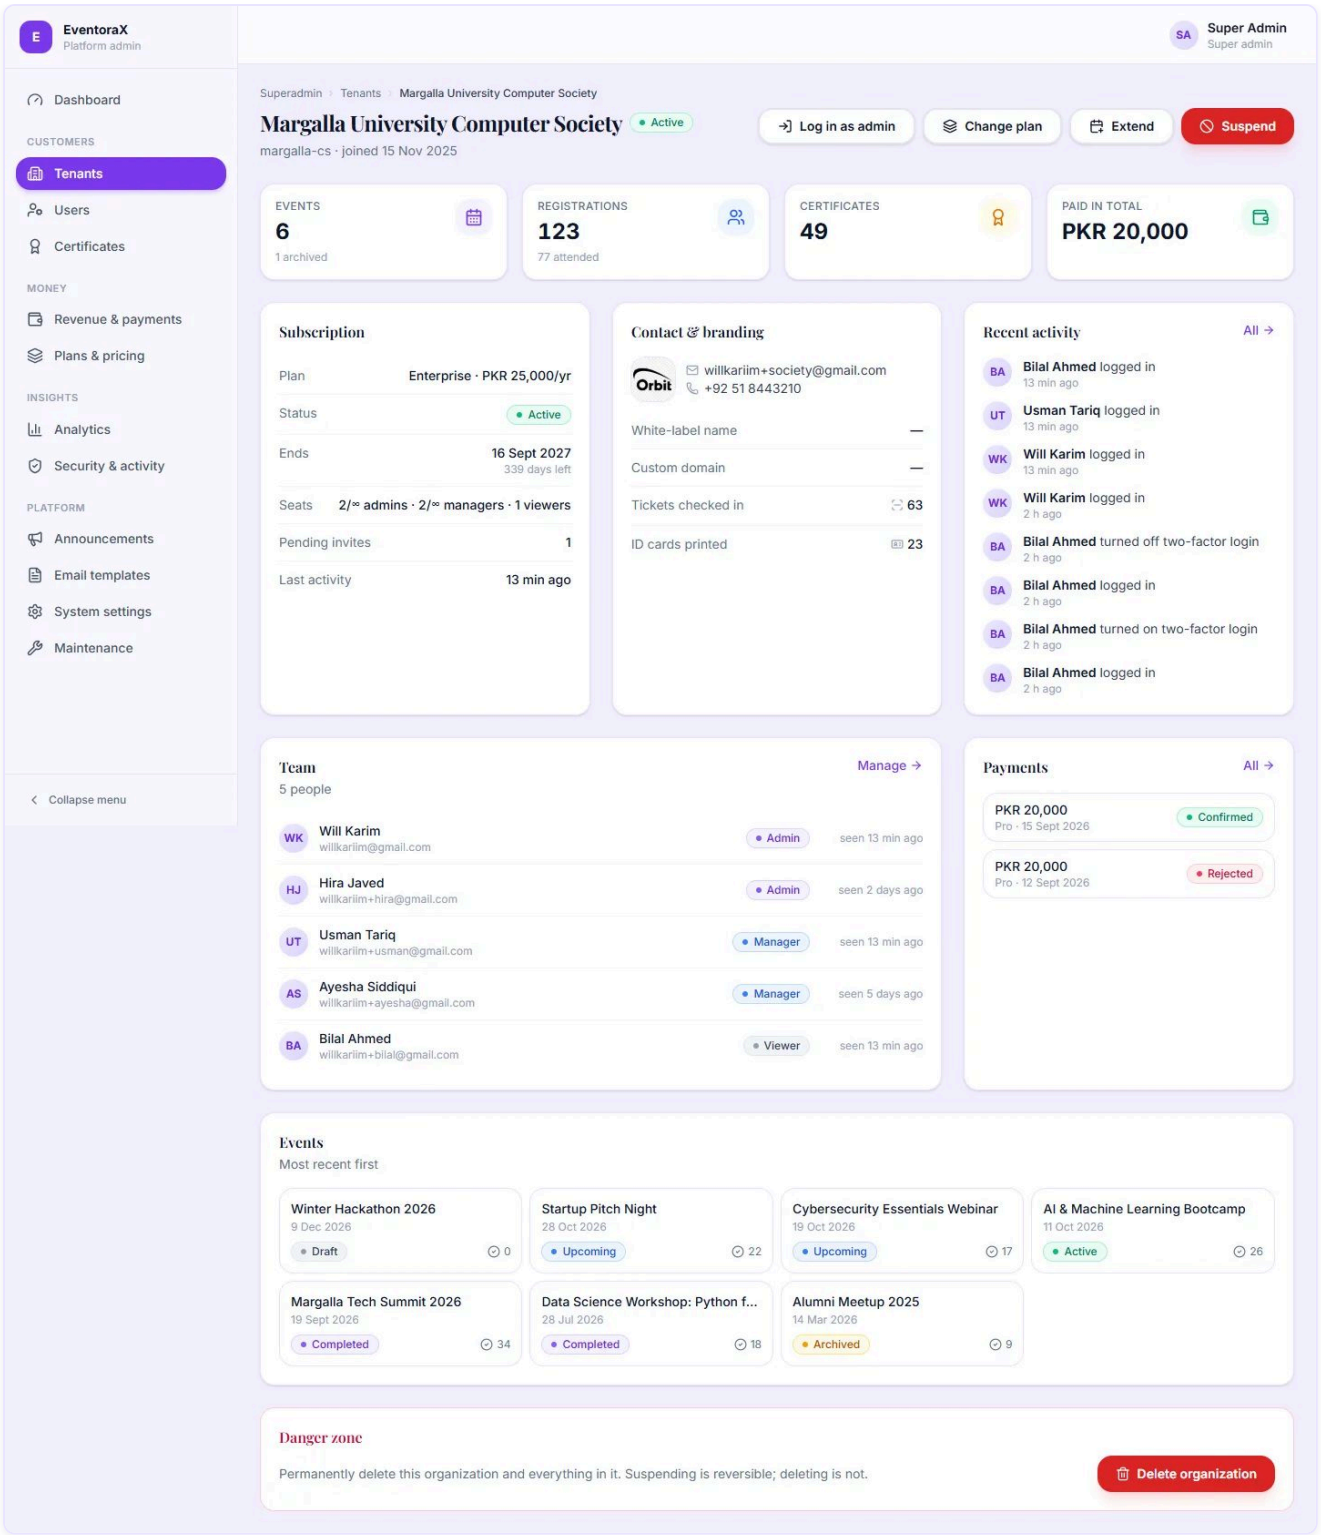

Add tenant creates an organization by hand (for example after a phone call):

Add tenant

Enter the organization's name, email and phone, the first admin's name and email, the plan and whether it starts as a trial or active. A **temporary password** is shown once: copy it and give it to the admin. No email is sent.

A tenant's page

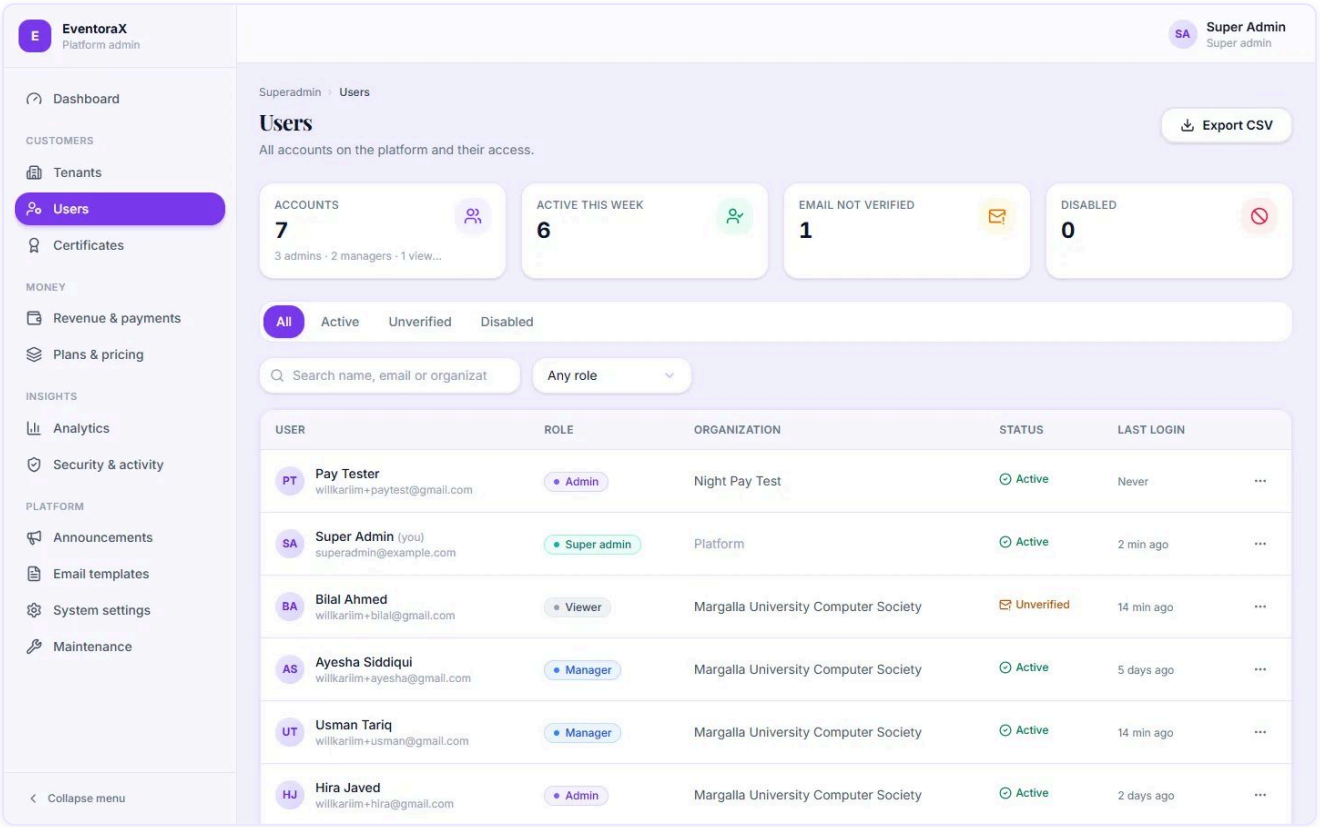

Tenant detail

Usage numbers, subscription (plan, status, end date, seats used), contact and branding, recent activity, team, payments and events. Actions at the top:

Action	What it does
Log in as admin	Opens their dashboard as their first admin for up to 1 hour, to help or investigate. A dark banner shows you're viewing as them; **Back to superadmin** returns. Everything you do is logged as done "via log in as". Password changes are blocked.

Action	What it does
Change plan	Moves them to another plan. Nobody is removed; new limits apply to new invites.
Extend	Adds days (or sets a new end date) to their trial or plan, counting from the later of today and the current end date.
Suspend / **Reactivate**	Suspending (reason required) stops everyone in the organization from logging in; they see the reason. Reactivating restores it.
Delete organization (Danger zone)	Permanently deletes it and its files. You must type the exact name. Suspending is usually the better choice.

Users

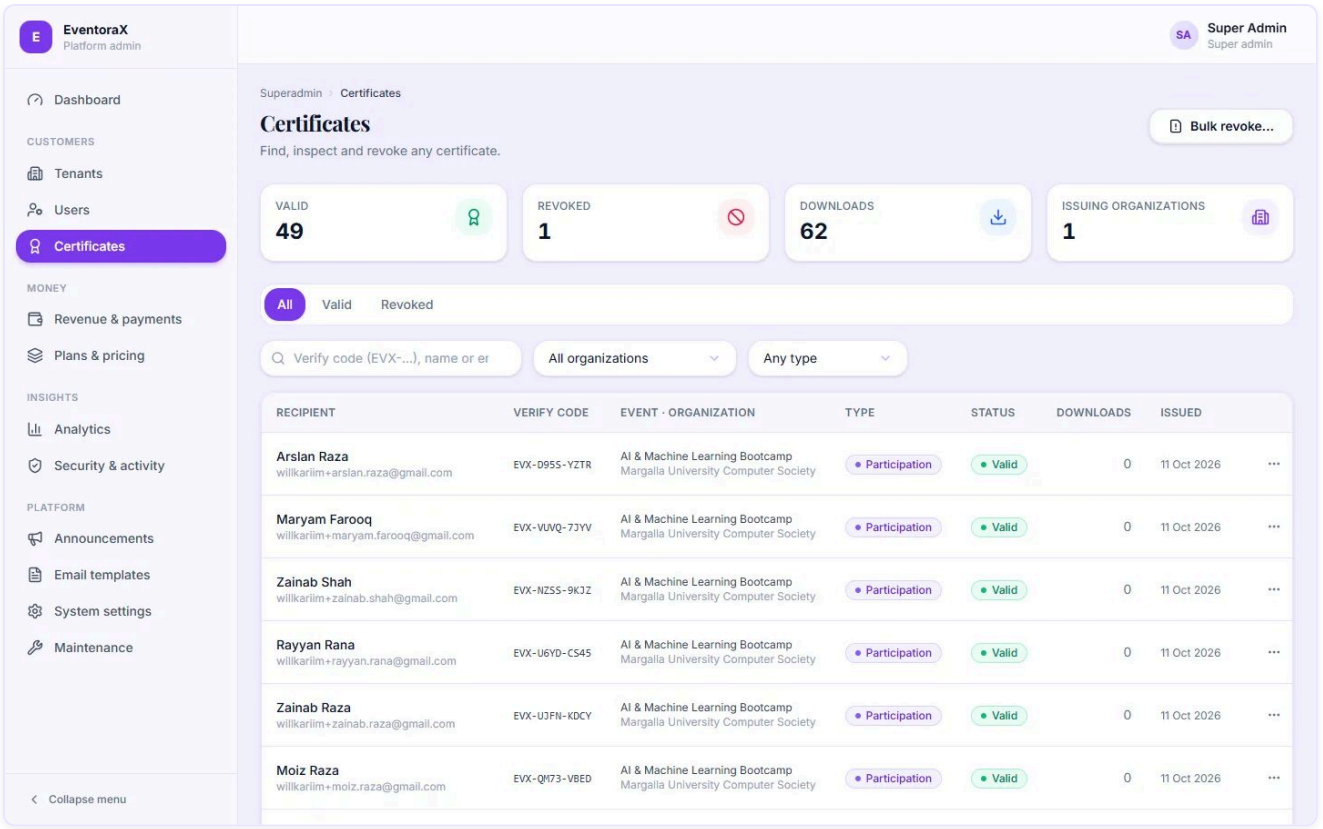

Users

Every account on the platform. Tabs (Active, Unverified, Disabled), search by name, email or organization, filter by role, **Export CSV**. Click a person (or **View details**) to see their recent logins and activity. Actions:

- **Disable account** / **Enable account** (disabling also logs them out; Undo available).
- **Log out everywhere**.
- **Email reset link** (valid 15 minutes) or **Set temporary password** (shown once, you share it).
- **Reset two-factor login** (only after making sure who you're talking to).

You can't do these to yourself or to another superadmin.

Certificates

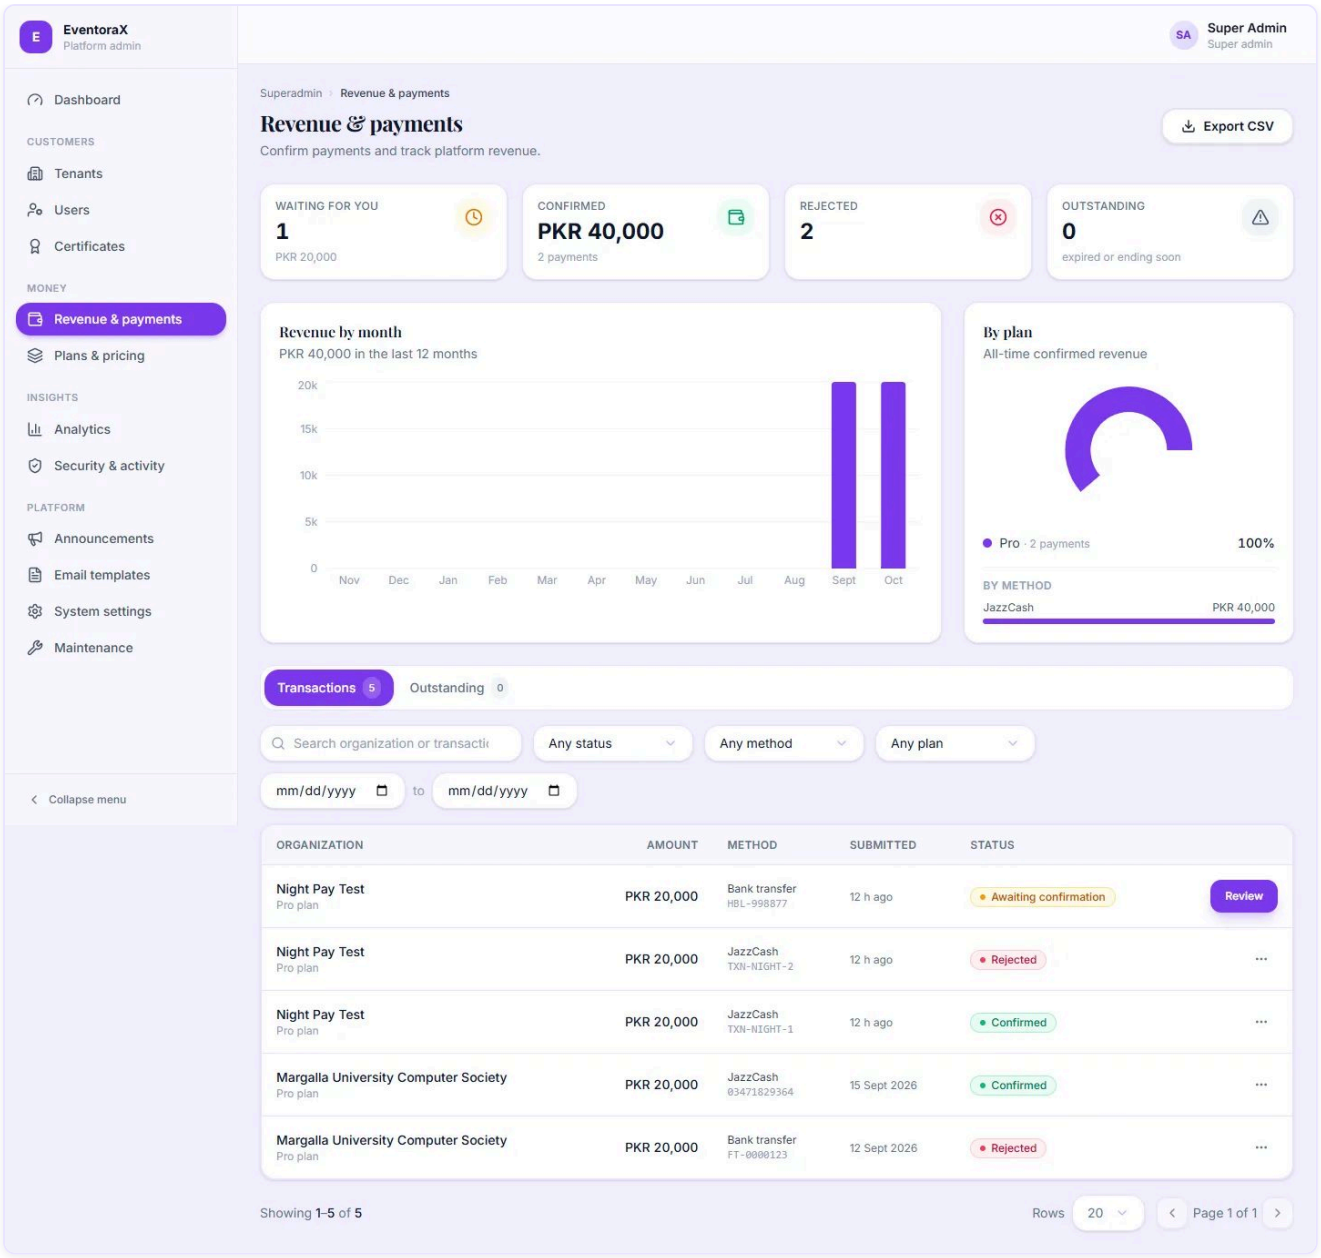

All certificates

All certificates of all organizations. Search by verify code, name or email; filter by status, organization and type. Open one to see the PDF, an **integrity check** (is the PDF unchanged since it was issued?), downloads and the public verify link, and to **Revoke** (reason required) or **Restore**.

Bulk revoke… revokes every valid certificate of one event or one organization (for example after fraud). It first shows how many will be revoked; a second click does it.

Money

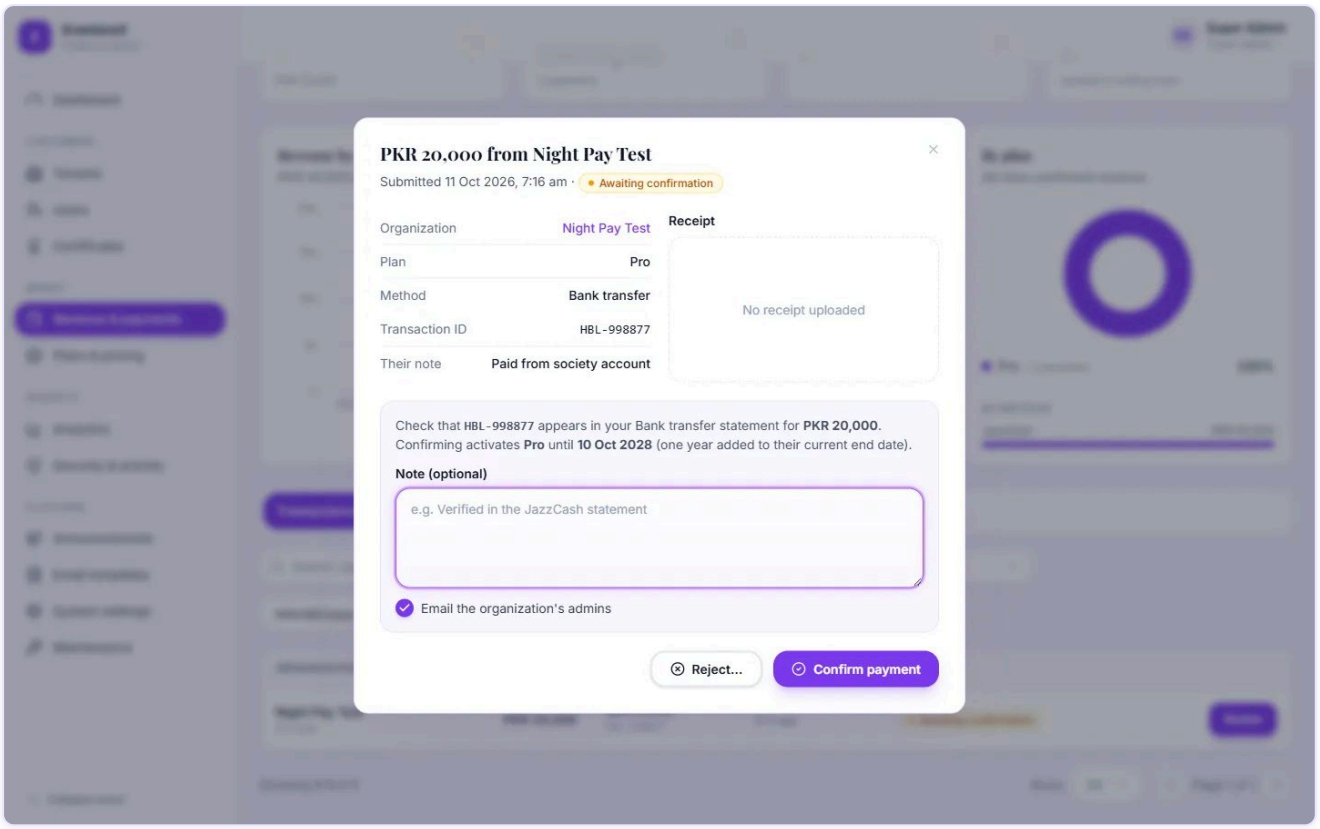

Revenue & payments

Revenue and payments

- **Cards:** payments waiting for you, confirmed total, rejected, outstanding (expired or ending soon without payment).
- Revenue by month, by plan and by payment method.
- **Transactions** tab: every payment with filters (status, method, plan, date) and **Export CSV**.
- **Outstanding** tab: organizations that expired or end within 14 days without submitting a payment, with an Email button.

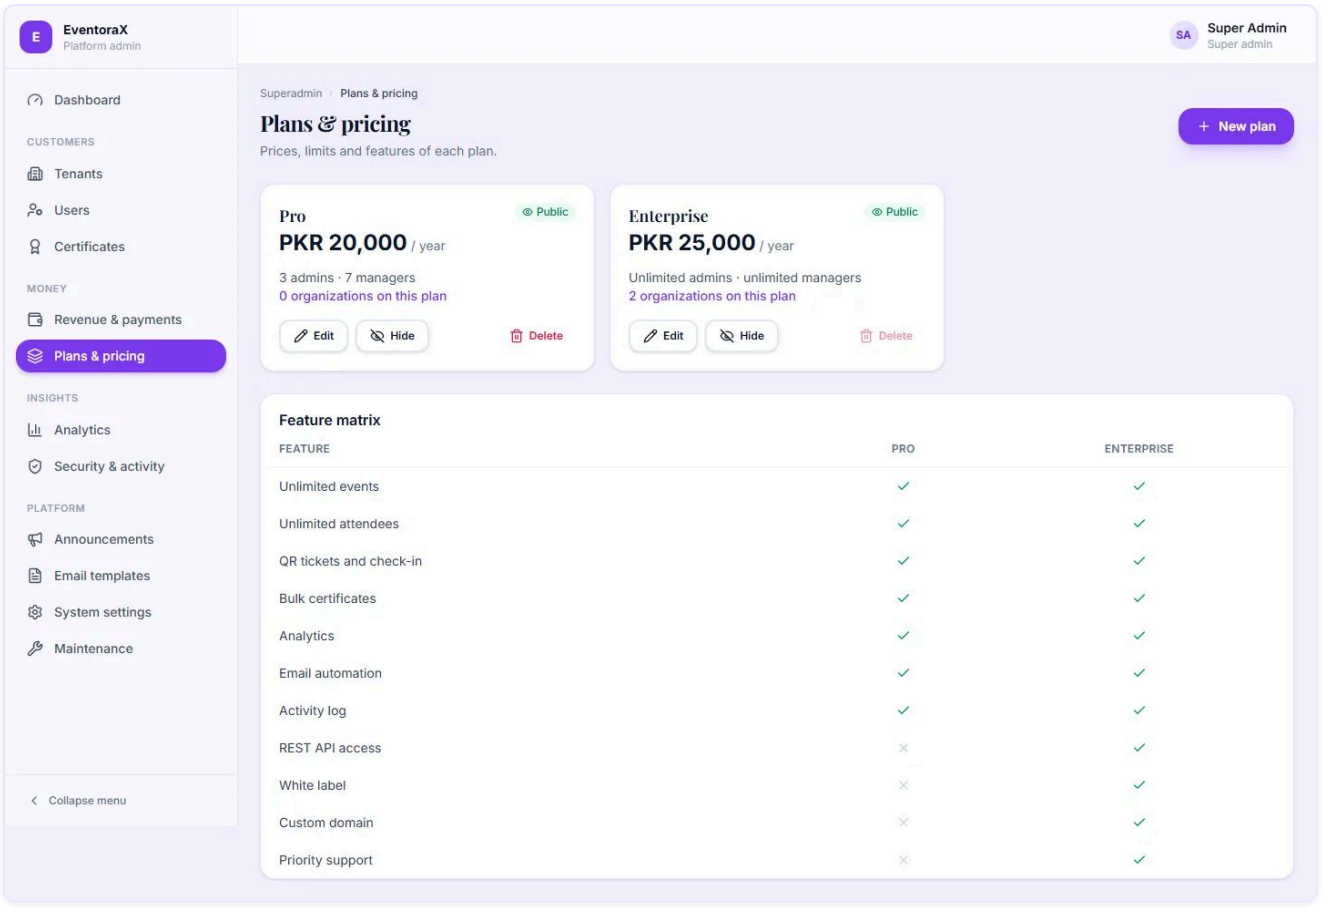

Confirming a payment: click **Review** on a payment that is *Awaiting confirmation*.

Review a payment

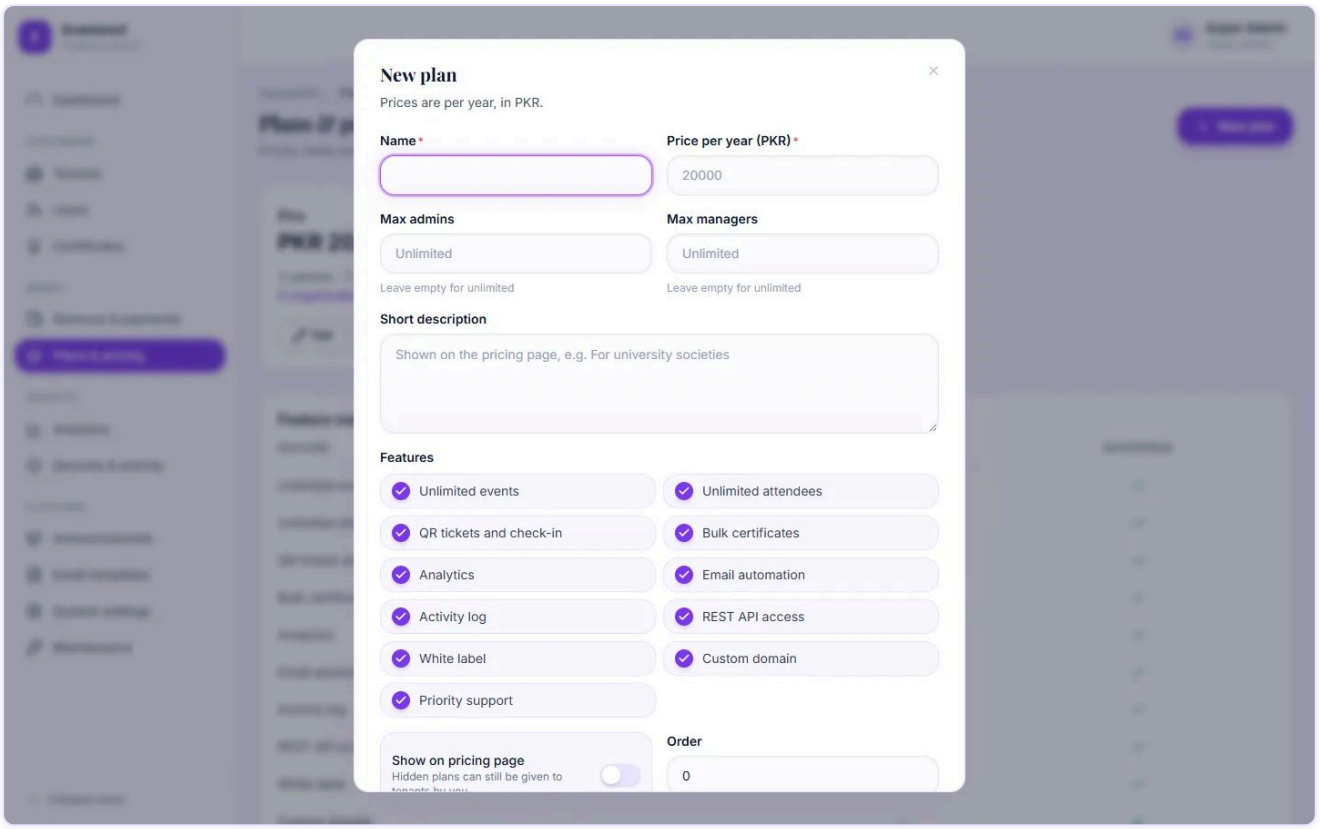

1. Check the transaction ID and amount against your JazzCash, Easypaisa or bank statement, and look at the receipt.
2. Optionally add a note. Leave **Email the organization's admins** ticked to tell them.
3. **Confirm payment**: the organization gets that plan, becomes active, and its end date moves one year forward (from its current end date if still running, otherwise from today). The dialog shows the exact new date.
4. Or **Reject…** with a reason (required). The organization sees the reason on its Billing page.

Plans & pricing

Plans

The plans organizations can buy, with price, seat limits, how many organizations use each and a feature matrix.

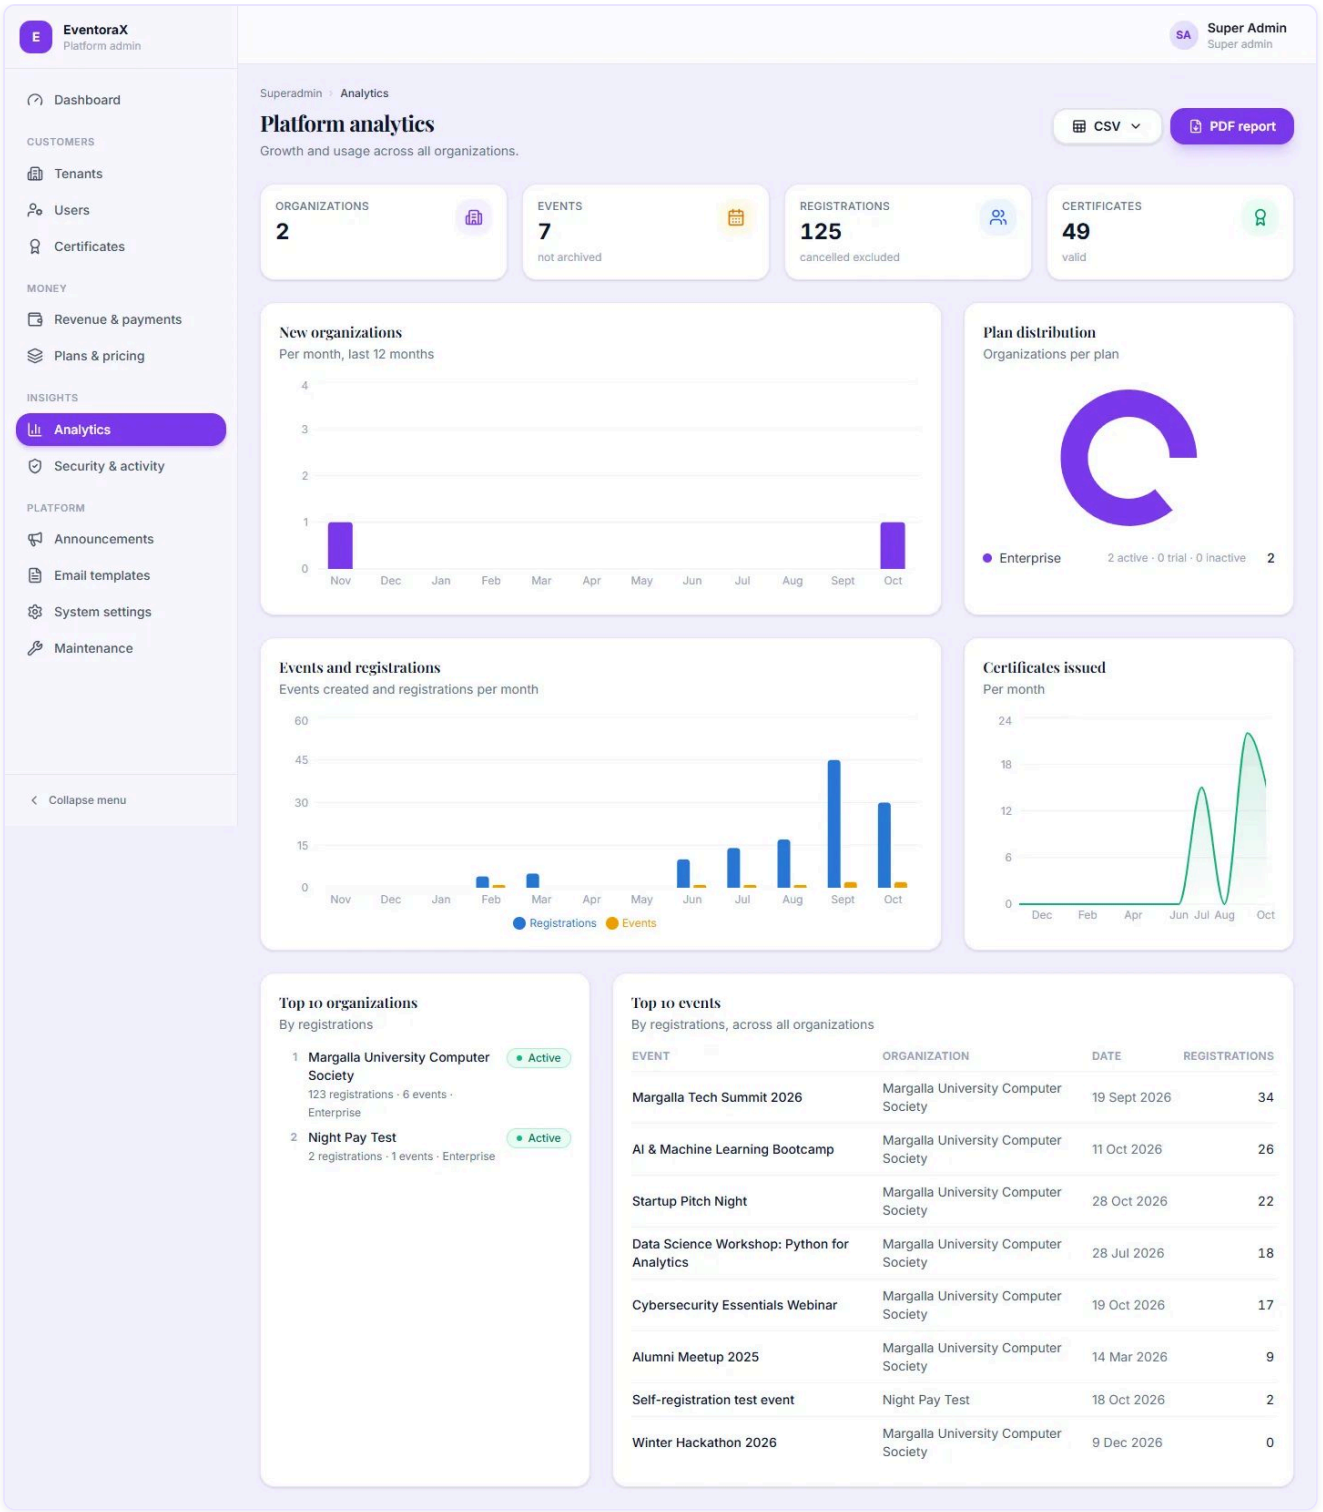

Plan editor

New plan / **Edit**: name, yearly price in PKR, maximum admins and managers (empty = unlimited), description, feature switches (REST API, white label, custom domain, priority support…), whether it shows on the public pricing page, and its order. **Hide** removes a plan from the pricing page (with Undo). **Delete** only works for plans nobody uses. Price changes apply to future payments.

Insights

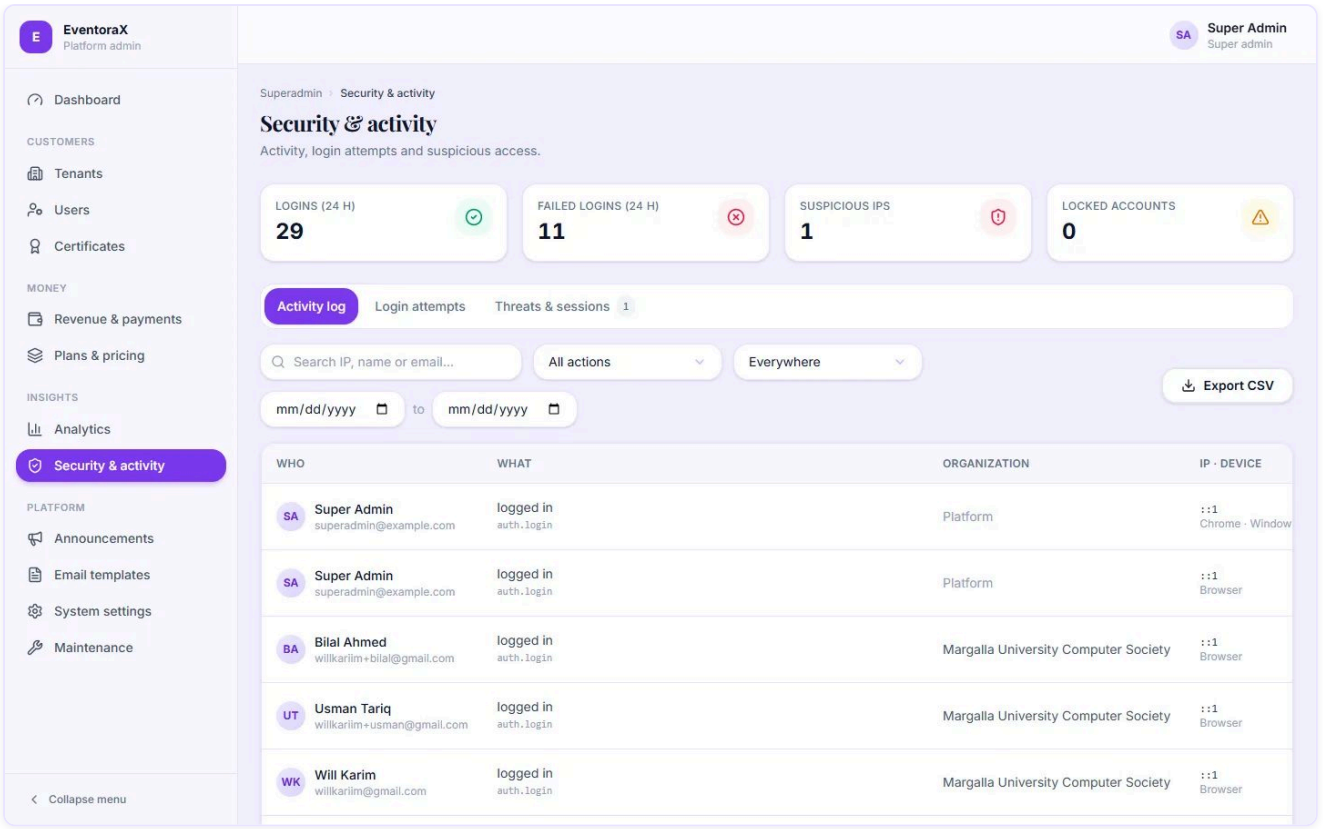

Analytics

Platform analytics

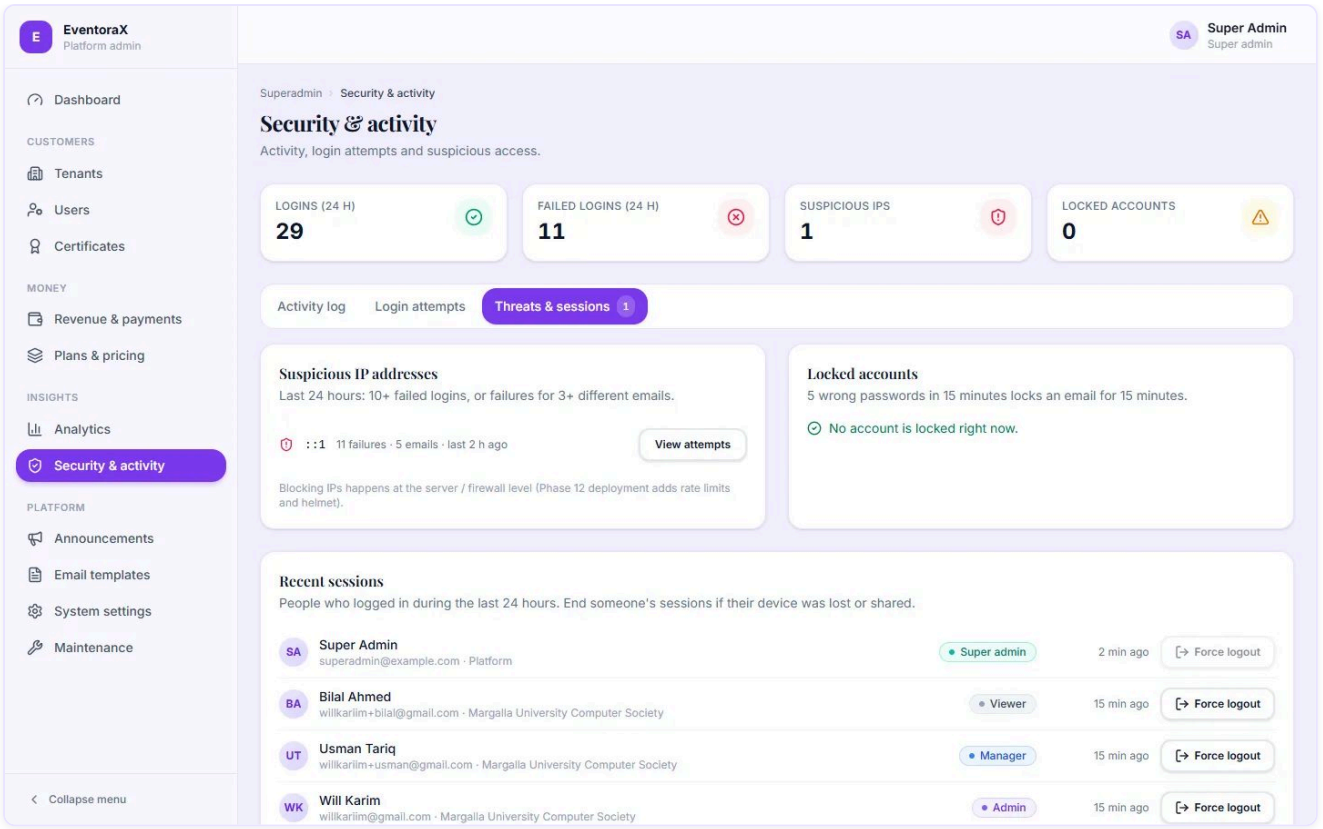

Platform-wide totals, new organizations per month, plan distribution, events and registrations per month, certificates per month, top 10 organizations and top 10 events. **PDF report** and **CSV** exports.

Security & activity

Security

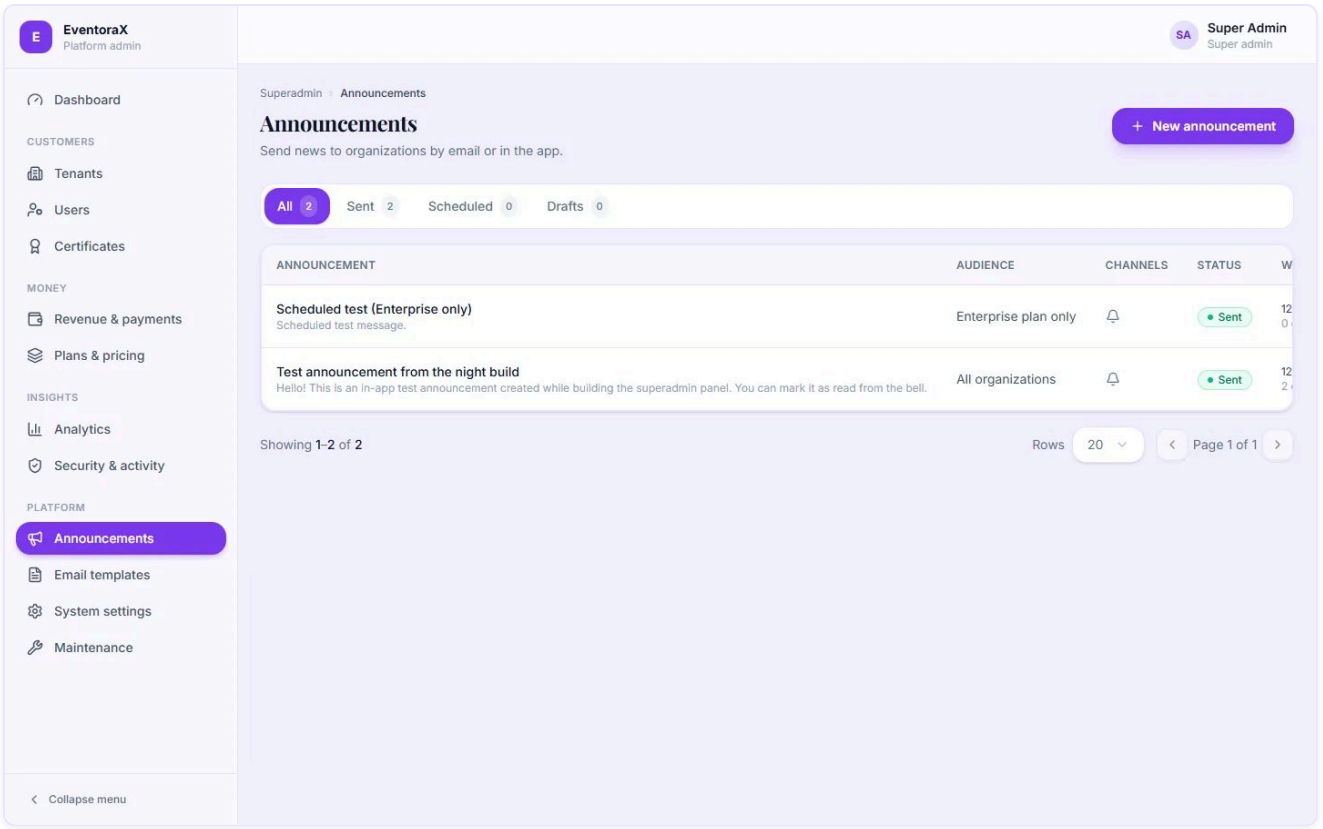

- **Cards:** logins and failed logins in the last 24 hours, suspicious IP addresses, locked accounts.
- **Activity log:** every action on the platform, by every organization and superadmin, with filters (search by IP, name or email; action type; organization or "Platform only"; dates) and **Export CSV**.
- **Login attempts:** every login try with result, email, IP and device. Click an IP to see all its attempts.
- **Threats & sessions:** suspicious IPs (10+ failed logins in a day, or failures for 3+ different emails), currently locked accounts (they unlock by themselves after 15 minutes), and recent sessions with **Force logout**.

Threats and sessions

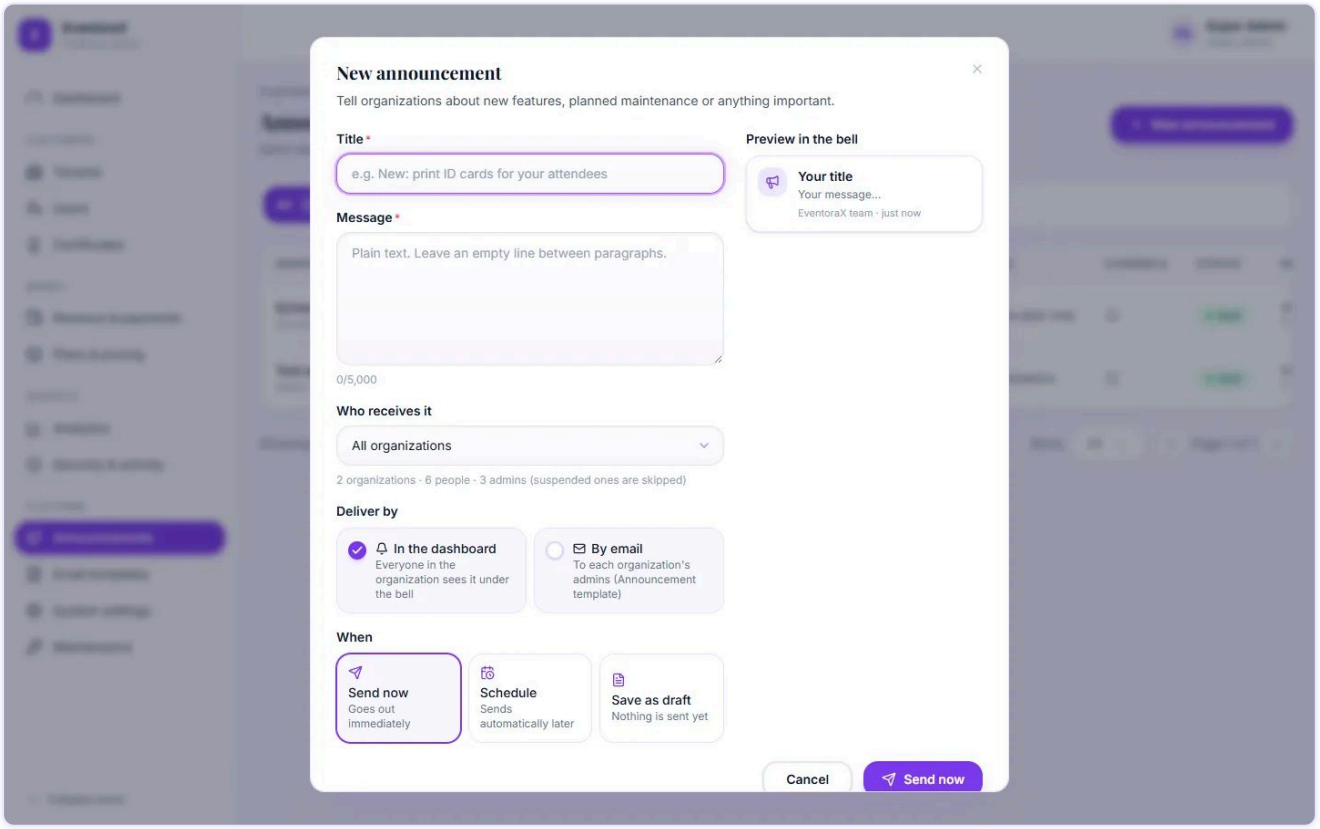

Platform

Announcements

Announcements

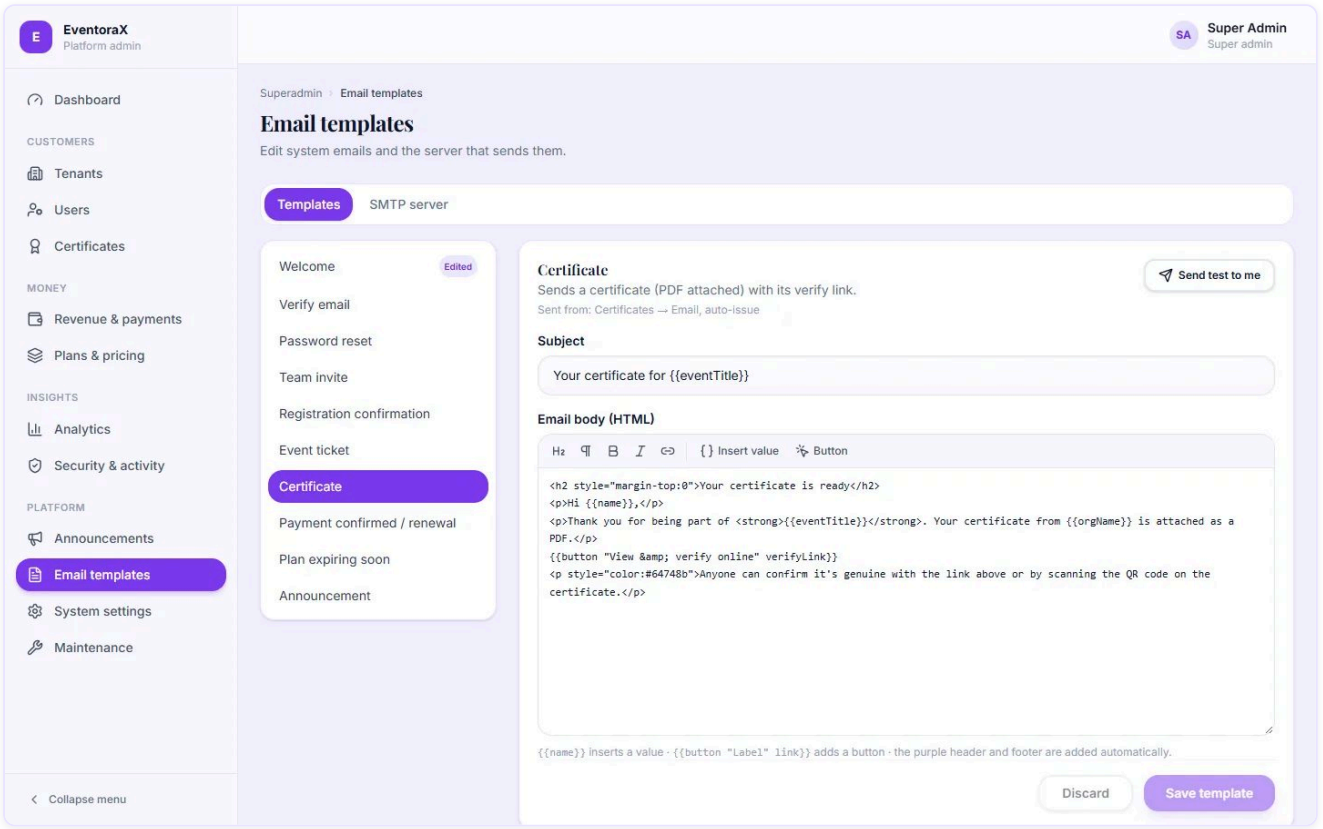

Messages from the EventoraX team to organizations (new features, planned maintenance). Tabs: All, Sent, Scheduled, Drafts.

New announcement

1. **New announcement:** title and message.
2. **Who receives it:** all organizations or the organizations on one plan. It shows how many organizations, people and admins that is (suspended ones are skipped).
3. **Deliver by: In the dashboard** (everyone sees it under the bell) and/or **By email** (to each organization's admins).
4. **When: Send now** (asks first), **Schedule** (date and time, sent automatically) or **Save as draft**.

Email templates

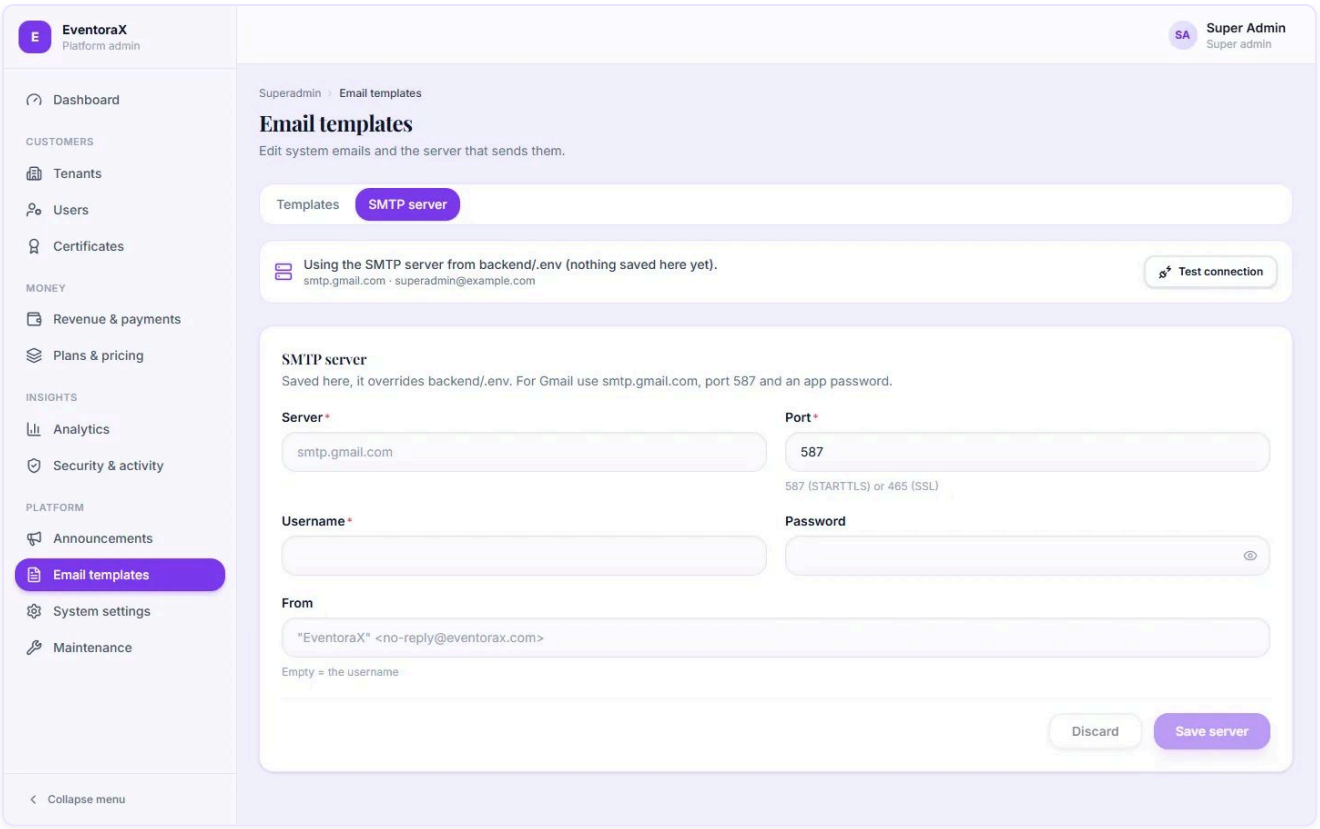

Email templates

The wording of every email the platform sends: Welcome, Verify email, Password reset, Team invite, Registration confirmation, Event ticket, Certificate, Payment confirmed / renewal, Plan expiring soon, Announcement.

- Pick a template, edit the **subject** and **body**. The toolbar adds headings, bold, italic and links; **Insert value** adds things like the person's name (`{{name}}`); **Button** adds the purple button.
- A live preview with sample values sits below the editor.
- **Save template**, **Discard**, **Reset to default** (back to the original text), **Send test to me**.
- Edited templates are marked "Edited".

SMTP server tab: shows which mail server sends the emails, **Test connection**, and a form to save a different server.

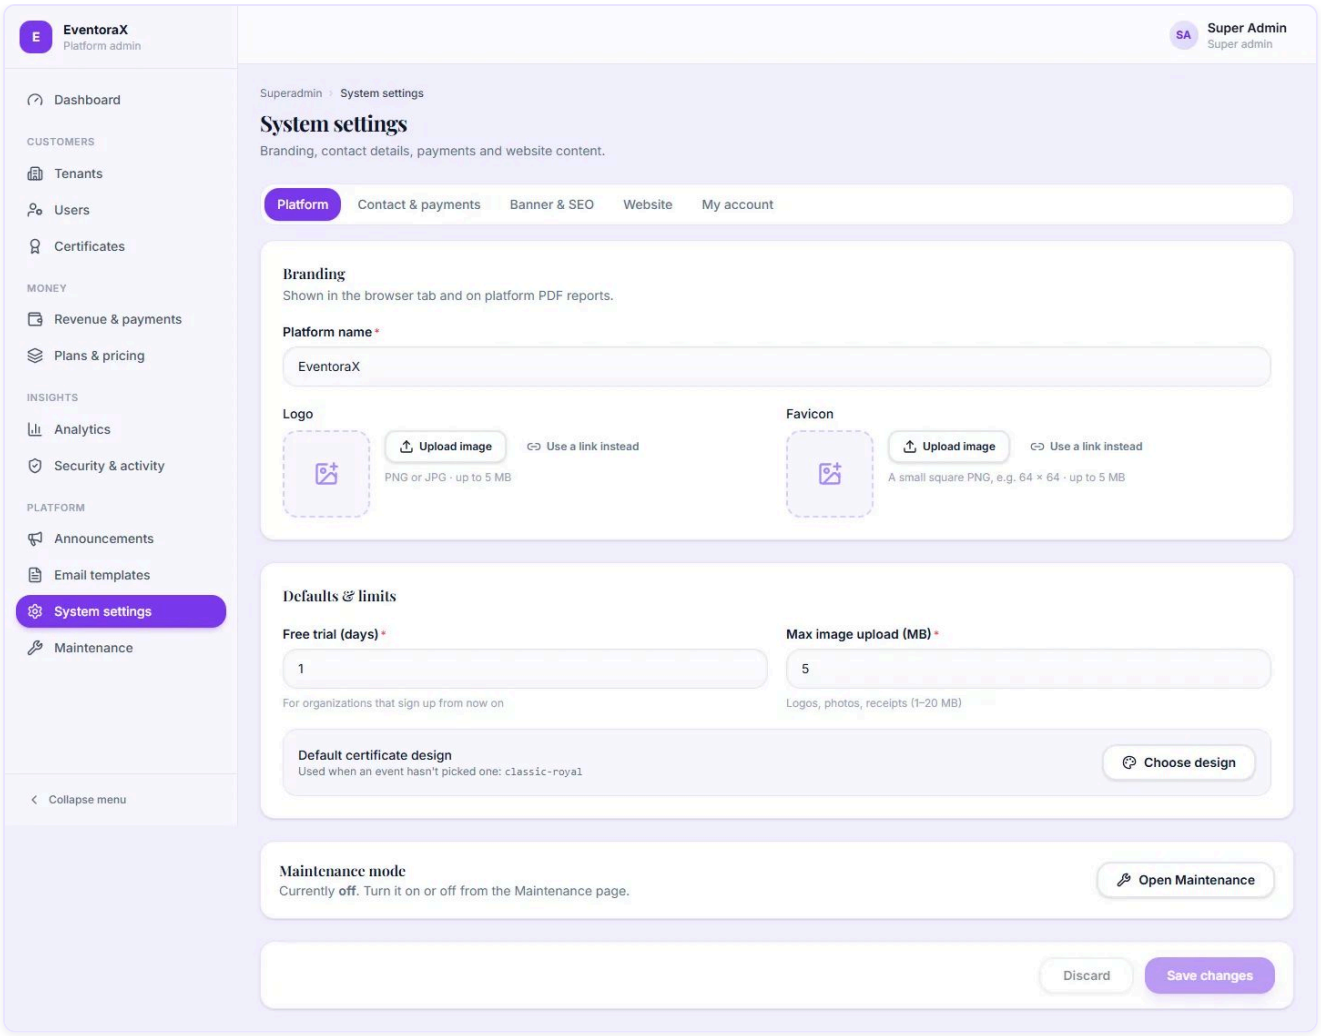

SMTP server

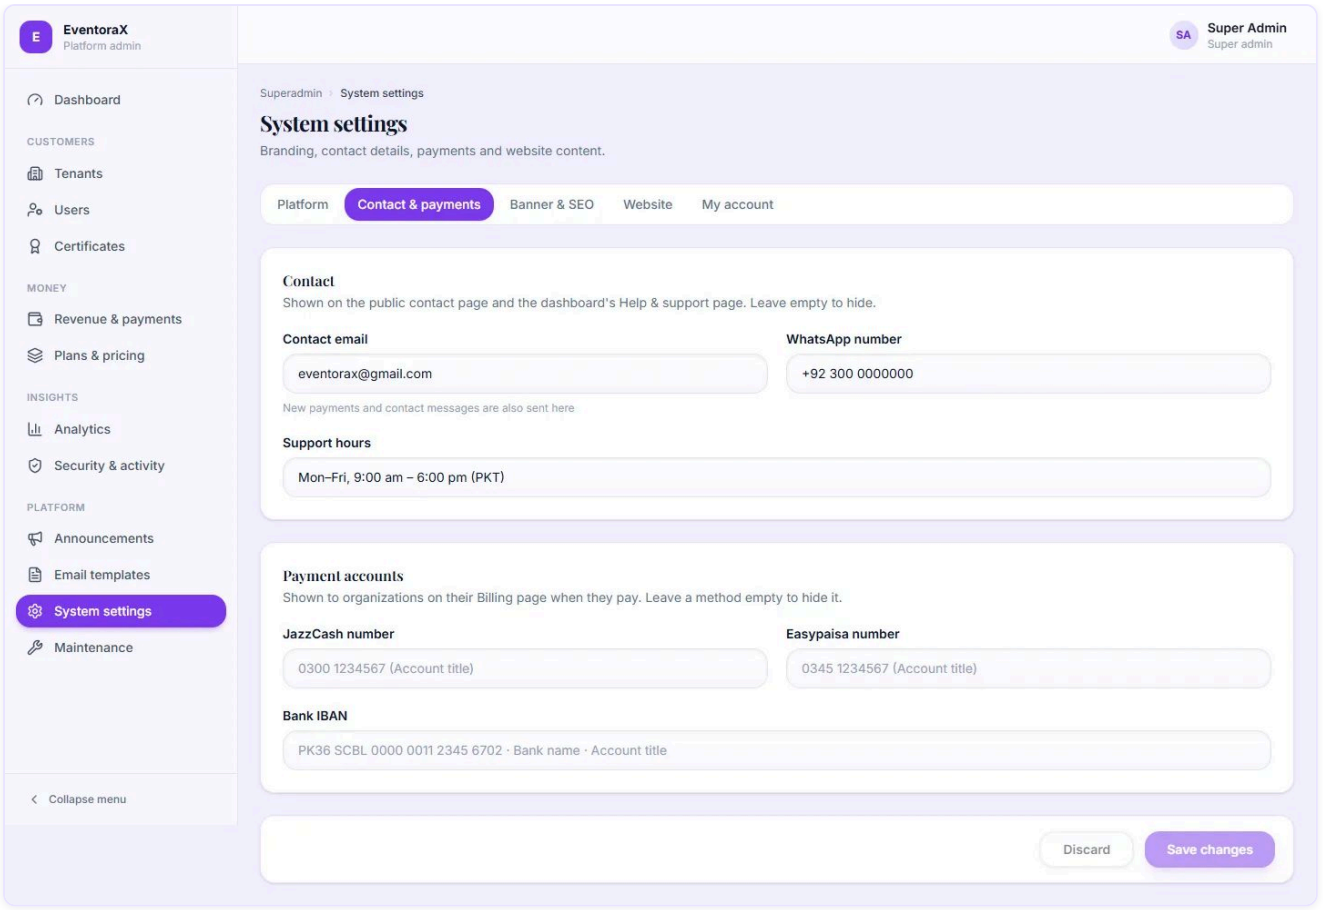

System settings

Four tabs plus your own account:

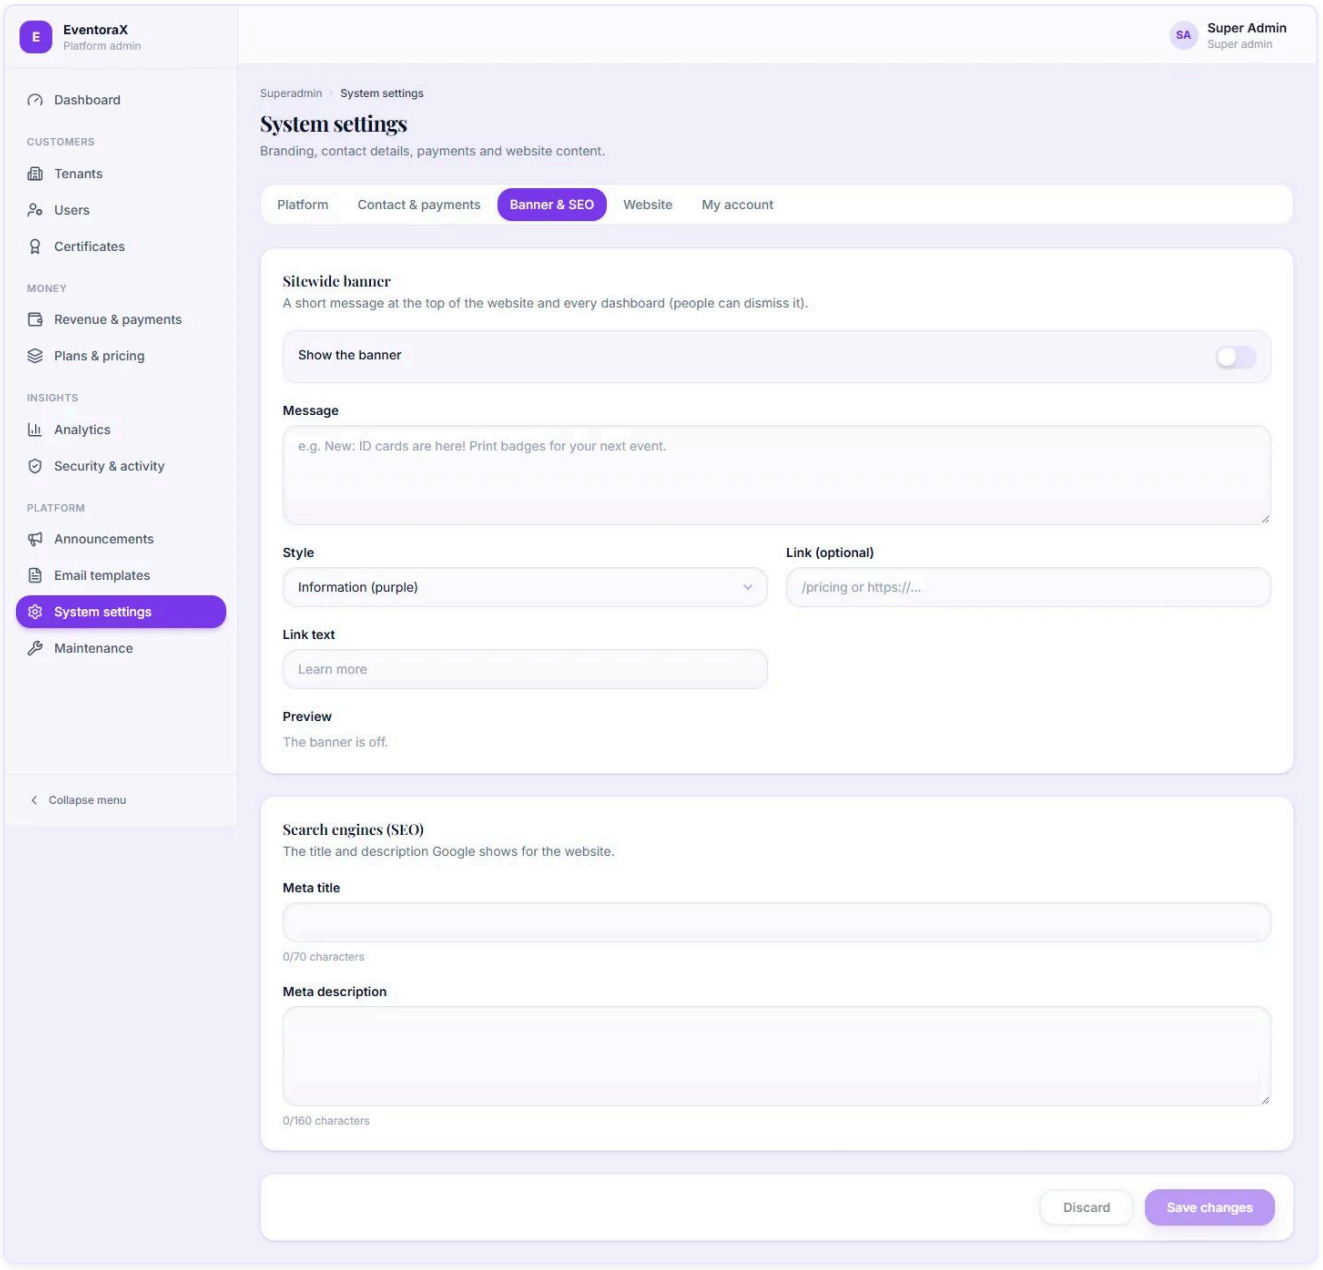

Tab	What's in it
Platform	Platform name, logo, favicon, free-trial length in days, maximum image upload size, default certificate design
Contact & payments	Contact email (contact-form messages go here), WhatsApp number, support hours, and the JazzCash, Easypaisa and bank accounts organizations pay into
Banner & SEO	A banner across the top of the website and every dashboard (message, style, optional link, preview; people can dismiss it); the title and description used by search engines and link previews
Website	Live numbers on the home page, testimonials, logos of organizations using EventoraX, social media links. Home page sections stay hidden while empty.
My account	The superadmin's own profile, password, two-factor login and sessions

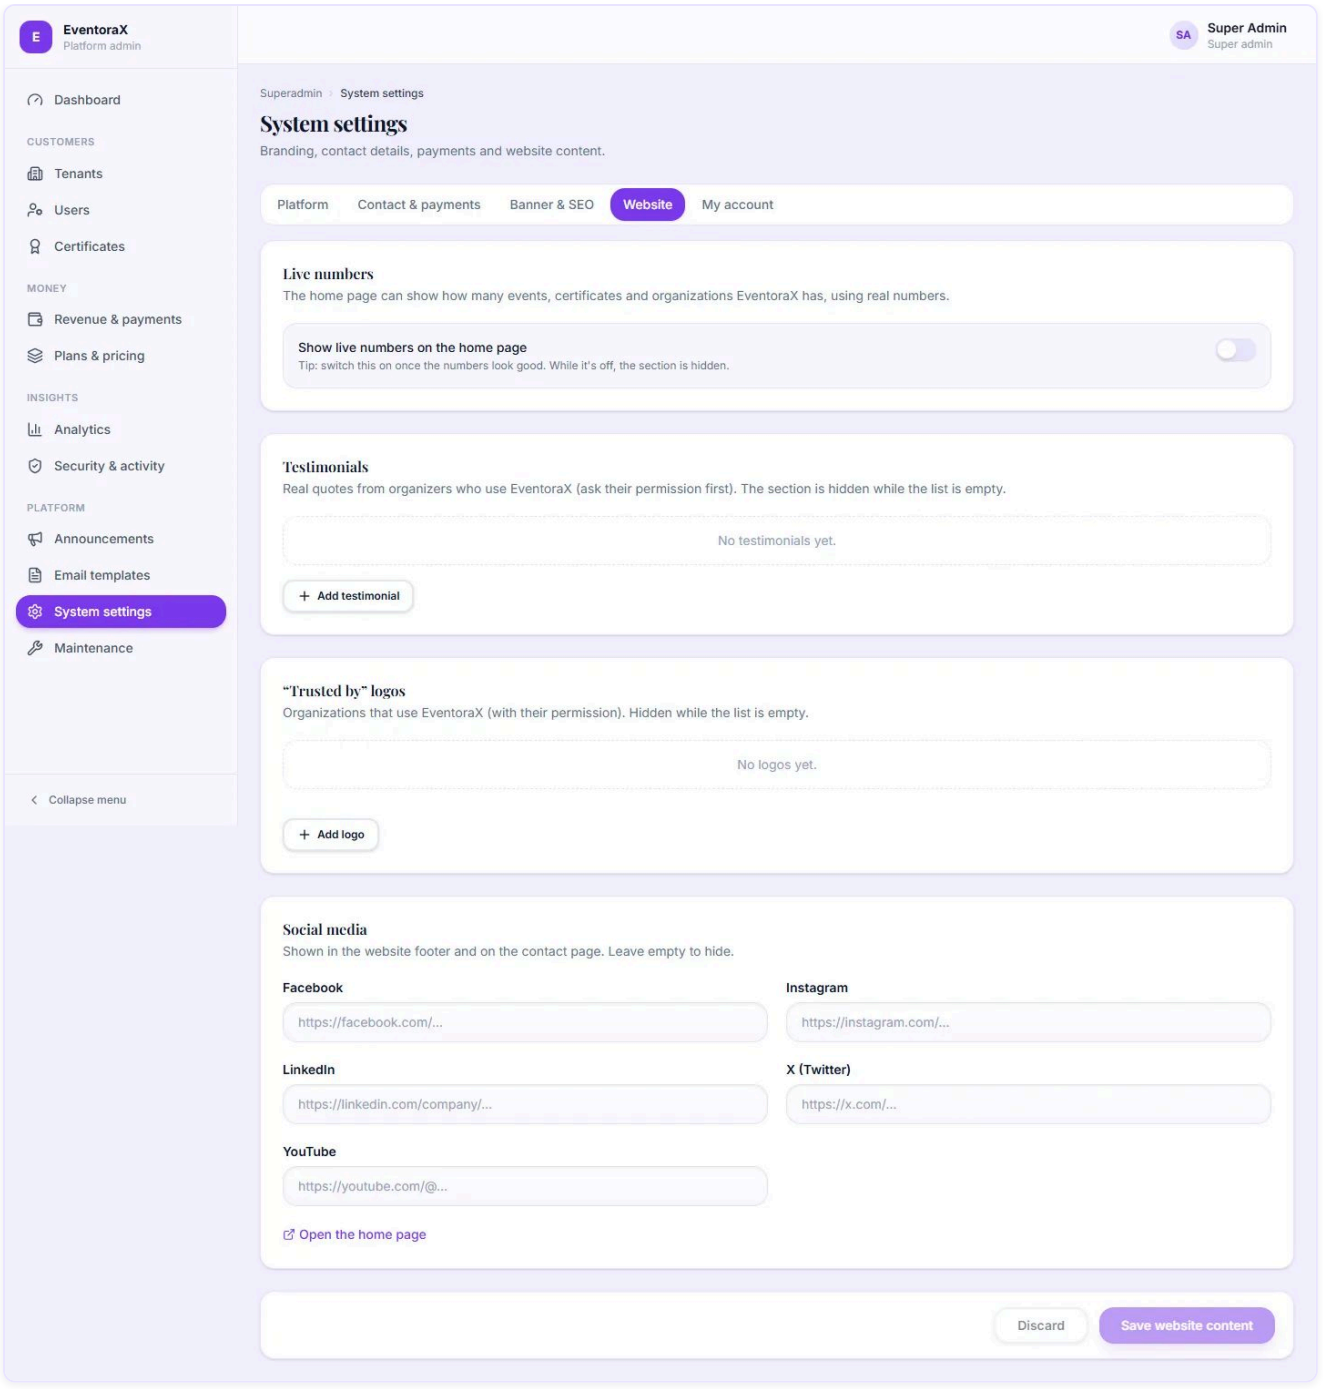

System settings: platform

System settings: contact and payments

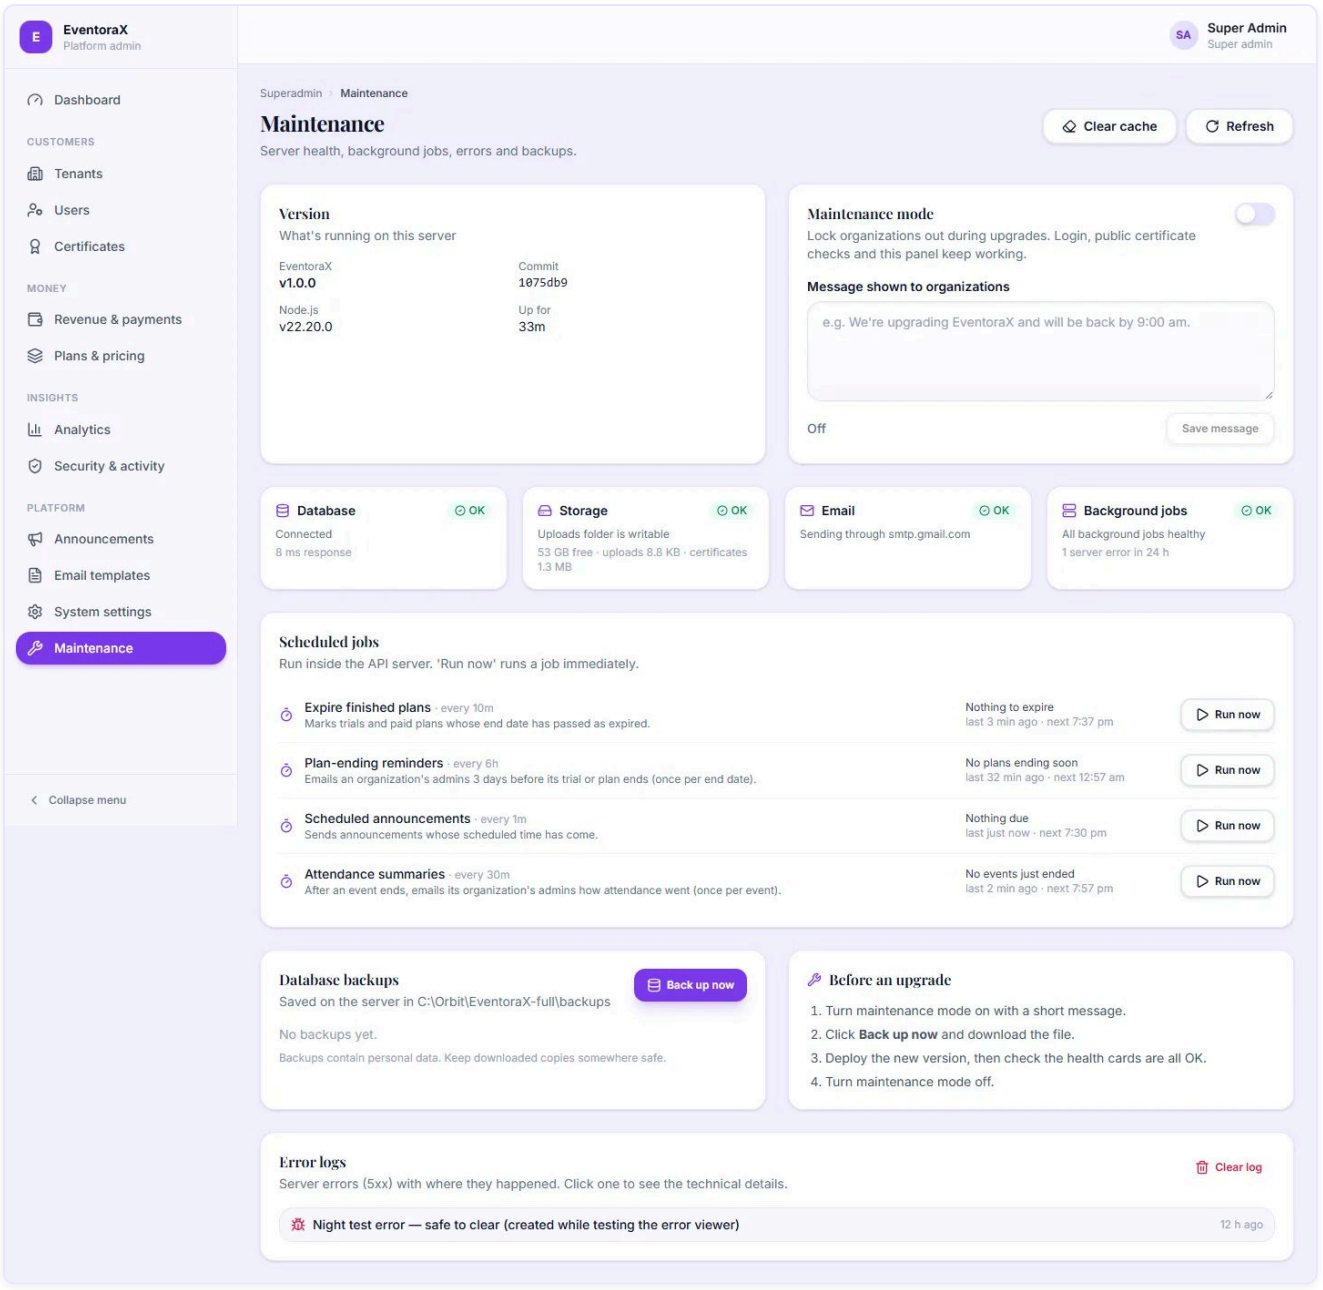

System settings: banner and SEO

Maintenance

Maintenance

- **Version:** app version, code version (commit), Node.js version, how long the server has been up.
- **Maintenance mode:** switch on during upgrades. Organizations see a "we'll be right back" screen with your message; login, public certificate checks and the superadmin panel keep working.
- **Health:** database, storage (free disk space, size of uploads and certificates), email and background jobs.
- **Scheduled jobs:** expire finished plans (every 10 minutes), plan-ending reminders (every 6 hours, 3 days before the end), scheduled announcements (every minute), attendance summaries (every 30 minutes). Each shows its last result and next run, with **Run now**.
- **Database backups: Back up now** saves a copy of the database on the server and lists earlier backups to download. Backups contain personal data: keep downloaded copies safe.
- **Before an upgrade:** a 4-step checklist.
- **Error logs:** server errors with where they happened; click one for technical details. **Clear log**.
- **Clear cache** and **Refresh** at the top.
